Secure You Development Pipeline with Continuous Code Signing

Billions of dollars are lost every year to software supply chain attacks due to unsecured code. It's never been easier to secure your software pipeline against these attacks. Integrate automated code signing into CI/CD pipelines with SSL.com's cloud code signing and Extended Validation code signing certificates.

☁️ Unleash the Power of Cloud Code Signing:

- Authenticate with Confidence: Ensure the integrity and origin of your code, building trust with end users.
- Streamline Your Workflow: Automate the signing process, enhancing efficiency across development cycles.
- Scale Seamlessly: Adapt effortlessly to project growth without the need for extra infrastructure.
- Ensure Compliance: Maintain strict audit trails, meeting industry standards with ease.
- Collaborate Globally: Sign code securely from any location, fostering teamwork and flexibility.
- Speed to Market: Get your products out faster with an optimized signing process.

🔄 Everything You Need to Secure Your Code Automatically:

- Easy integration with easy-to-follow guides and 24/7 support
- Automatic pre-signing malware scans to ensure integrity
- Scalable, price-efficient digital signature plans
- No need for additional hardware or HSM services

🏅 Seamless Integration in Four Steps:

- Choose the certificate with the validation level required: individual, organization, or extended which gains automatic trust from Microsoft after validation.
- Complete the standard validation process for certificate issuance.
- Integrate SSL.com's API with your CI/CD service directly or through free utilities that complete all hashing, timestamping and revocation lookup operations.
- Start signing code automatically
