# How to host an inexpensive and sustainable social gathering/dinner party!

Since the weather is not warm enough to entertain/host people outside, most people have been opting to entertain inside their homes. This consists of dinner parties, wine nights, game nights and other social gatherings. But entertaining can be expensive... the cost of materials like plates, napkins and decorations can add up quickly, not to mention the cost of the food itself. This month our team has put together some ways you can still entertain friends/family while saving money in certain areas.

- Re-use decorations/modify existing decorations to create something new. This will prevent you from having to buy new decorations for your guest.
- Break out old plates and utensils you have in storage, this will prevent you from having to buy new ones/limit the use of plastic and disposable cutlery.
- Check your pantry before shopping, most likely you have half the ingredients you will need. This will help reduce your costs.
- Use the Eco Setting or “Energy Efficient settings on your appliances, this will help reduce your energy consumption.
- Plan your food preparation, this way you can limit how many times you open/close oven doors, refrigerators and freezers.
- Turn down the heat before people arrive, the heat from the oven and the number of people will warm up the space quickly.
