Energy Saving Tips

Spring is fast approaching which means the weather will be getting warm, this can cause your electricity bill to increase based on your usage patterns. The use of air conditioners and fans will cause your electricity monthly consumption to increase.

1. Track your Energy Usage: Every month your Electric bill will show the total number of kWh used for that month. Write that number down every month so you can track any increases.
2. Open Windows: When the temperature are cool out, open all windows to get a cross breeze, this is a natural and cost effective way to cool your house and limit air conditioner usage.
3. Update Appliances: Look for the ENERGY STAR® label on any new appliances you purchase, this signifies that this is an energy efficient appliance.
4. Educate yourself: Take some time to learn/understand your bill. There are resources out there that will teach you the meaning of the cost breakdown of your bill. We know it is confusing at first but that's why South Bay Energy is here to help!
