Sustainable Garden Watering

There are many benefits of sustainable garden watering such as saving water, reducing costs, the potential for healthier plants, protecting the planet, and more!

TIPS

1. Water either early or late in the day to reduce evaporation and allow for plants to better absorb water.
2. Use mulch around plants to retain moisture, suppress weeds that compete for water, and reduce soil temperature.
3. Be sure to water at the roots of the plant, not the leaves!
4. To encourage deep root growth, water less often but more thoroughly.
