

NELTRON PHOTODYNAMIC LIFT

What is NELTRON Photodynamic Lift?

Photodynamic Facial Lifting is a 100% holistic, non-invasive treatment that uses homeopathic medicine without chemical-pharmaceutical additives and uses cold laser light to stimulate and control blood circulation and the production of its own collagen, fully controlled by the patient's own immune system (Nobel Prize in Medicine 2025 - to scientists Mary E. Brunkow, Fred Ramsdell and Shimon Sakaguchi, who discovered peripheral immune tolerance, an essential mechanism that allows the immune system to act on the patient's own defenses and never attack the body's own tissues.

It is called NELTRON because it uses the patient's individualized DNA - tRNA using Logical Intelligence, which is 20 times superior to Artificial Intelligence (AI).

Pen Motion Pictures of the United States, owner of the patent that establishes the biotechnological parameters within the natural logic of cellular mitochondria, establishes that energy maximization during the conversion of ATP into ADP produces a higher-than-normal energy increase during cellular regeneration, which is channeled into much greater available energy from Mega Electron Volts and tremendously helps the patient's immune system perform its functions.

This extra energy in the body establishes that there would be electrical hyper conductivity in all body fluids. The international scientific community has established that the human body is 74.5% liquid, allowing the immune system of patients treated with our system to age more slowly, at a ratio of 5:1; that is, a patient would look 5 years younger compared to another person of the same age.

Its benefits include naturally tightening the skin, as pores are minimized, reducing swelling in soft tissue, and offering an immediate rejuvenating effect in no more than 30 minutes. It can also improve skin quality and stimulate its natural defenses. It is also suitable for people with sensitive skin, with no side effects.
