

# The Making of...

*"Kee*

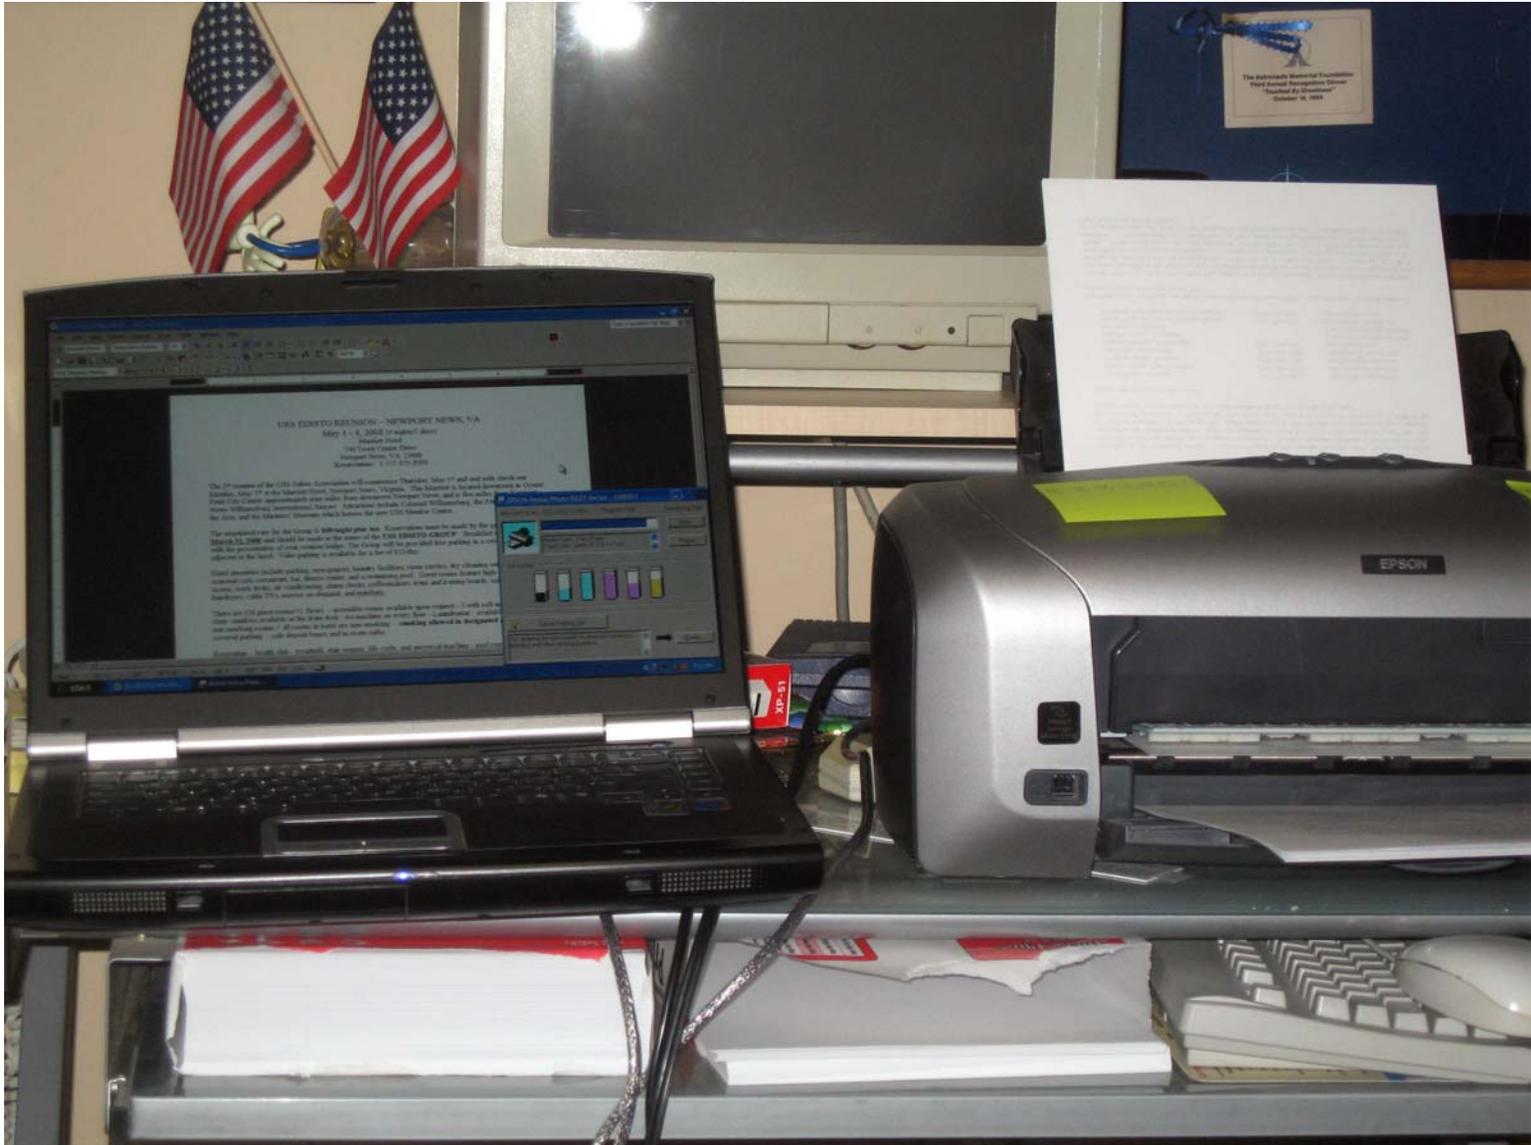

*"Bird"*

# First, you need the equipment

*Scientists from the RAND Corporation have created this model to illustrate how a "home computer" could look like in the year 2004. However the needed technology will not be economically feasible for the average home. Also the scientists readily admit that the computer will require not yet invented technology to actually work, but 50 years from now scientific progress is expected to solve these problems. With teletype interface and the Fortran language, the computer will be easy to use.*

# And a backup system

15 ink cartridges, 2 cases of paper, 2 boxes of envelopes, 2500 labels and 2 printers (1 worn out Epson printer)

# Add a little chaos

# Stir the trash

# Stuff & Seal 1,218 envelopes

# Stamp, Label and Stack

# And 10 million hours later...
