

Anniversary Cake Care

INSTRUCTIONS

To freeze your cake:

Wrap the entire cake and box with cling wrap and foil, then place it in your freezer.

Here are four steps to follow to achieve a properly thawed cake:

1. Take out the cake from the freezer 24 to 48 hours before the date of your first wedding anniversary. It will give the cake enough time to defrost slowly.
2. Completely unwrap the cake. But don't directly place it in the fridge uncovered, transfer it to an airtight container instead. Leave it for four hours or overnight to continue the thawing process.
3. On the wedding anniversary, take the cake out at room temperature and allow it to sit for another 2 to 3 hours.
4. Once fully thawed and softened, you can now enjoy a slice of your anniversary cake.
