

GARTEX Texprocess India set to Showcase Advanced Technologies in Garment & Textile Machinery at Yashobhoomi, Dwarka, New Delhi from 1-3 August 2024

solutions from countries like China, Italy, Japan, Singapore, Taiwan and the USA.

The show floor is sold out with leading Indian brands like Narinder International, AT Inks, Benz Embroidery, Britomatics India, Chetna Fashions, and True Colors amongst others. The international brands like

Baoyou, Brother, Datatex, Dupont, Jack, Kansai, SinSim, Siruba, Yumei and more will also add a global touch to the show.

The three-show days are lined up with more than a dozen of new product launches and the exhibitors showcasing their latest offerings. Some of the unique

product launches will be from brands like: Amtex Dye Chem Industries, Beharji Enterprises, Venus Denims, Vertex Edge Tech, Vinod Denim and more.

Show Highlights:
– The first edition to be organised at the state-of-the-art expo centre – Yashobhoomi, IICC, Dwarka, New Delhi

– 200+ exhibitors presenting 600+ brands from 7 countries

– Featuring curated-zones for product categories like 'Knitting, Sewing Machinery, Digital Printing, Embroidery, Fabrics & Trims.'

– Expansion of the Trims segment with new exhibiting companies

– International brands directly participating in the show

– Curated knowledge-sessions with a panel consisting of Government officials from the concerned Ministries, industry experts and innovators from the textile associations and businesses

Exhibitors Perspective Contd. on Page 2...

Prioritizing innovations and sustainable production, Indian textile players are set to announce new launches and developments at Gartex Texprocess India New Delhi 2024, organised by Messe Frankfurt Trade Fair India Pvt Ltd and MEX Exhibitions Pvt Ltd.

Anticipating a boost in the manufacturing sector, signing of the FTAs, the recent growth in the textile exports, bundled with the Indian government's focus on making India a 'global manufacturing hub' has set up encouraging prospects for the stakeholders of

the Indian textile value chain. This optimistic industry outlook is also evident in the spirit of the textile technology and apparel manufacturing players participating in the upcoming Gartex Texprocess India which is scheduled from 1 – 3 August 2024 at Yashobhoomi (IICC), Dwarka, New Delhi.

Regardless of the global economic and political landscape, the recent surge reported in textile exports and apparel at 9.59% and 9.70% respectively, in May 2024 as cited by the Confederation of Indian Textile Industry (CITI), marks a positive sign uplifting the spirits of

the Indian textile players. As per IBEF, the market for Indian textiles and apparel is projected to grow at a 10% CAGR to reach USD 350 billion by 2030 with the exports expected to reach USD 100 billion.

As India's leading expo covering garment and textile manufacturing, denim, accessories, textile printing technologies and more, Gartex Texprocess India is slated to showcase 600+ brands, spread over an area of 15,000 sqm at Yashobhoomi (IICC), Dwarka, New Delhi. Besides India, the upcoming edition will demonstrate the global excellence in textile

on Government Schemes:

On the government schemes and initiatives - many of companies shared that schemes and initiatives like PLI, ATUFs, RoDTEP & RoSCTL, NTPP, NHDP, PM MITRA Parks, Handloom Weavers' Comprehensive Welfare Scheme, Integrated Skill Development Scheme (ISDS), schemes for MSMEs and amongst others, have served to be beneficial for not only growing their businesses but also expand the technical skillsets resulting in a healthy business atmosphere.

As the preparations for the event gear up, Mr Raj Manek, Executive Director and Board Member of Messe Frankfurt Asia Holdings Ltd shared: "I think India is evolving

as a beacon of innovations and economic resilience. With the upcoming edition of Gartex Texprocess India 2024, the momentum has been set to present the transformations in textile manufacturing machinery, garment, fabric and denims to trims and accessories and lots more. Sustainability and Innovations in textiles are at the heart of the show."

Mr Gaurav Juneja, Director of MEX Exhibitions Pvt Ltd, added: "With the recent growth recorded in the textile exports and focus on boosting the manufacturing sector in India - it will take textile under its stride creating more business and job opportunities in very near future."

Knitting Machinery - Welcome to The World of Knitting Market

Knitting machinery has come a long way since its humble beginnings. From hand-operated knitting machines to sophisticated computerized systems, the evolution of knitting technology has been remarkable. Today, knitting machinery plays a crucial role in mass production, enabling the creation of intricate designs and high-quality fabrics with unmatched precision.

The knitting industry encompasses a broad spectrum of sectors within the garment manufacturing industry. There are various types of knitting machinery

and sensors, having a reliable source of spare parts is vital for minimizing downtime and maximizing productivity.

*Yarns: Whether it's natural fibers like wool and cotton or synthetic materials, choosing the right yarn is critical for achieving the desired texture, strength, and appearance.

India's Thriving Knitting Industry

Knitting is a method of creating fabric by interlocking loops of yarn using knitting needles or a knitting machine. Unlike weaving, which involves the perpendicular interlacing of yarn, knitting forms a series of connected loops that

available, each designed for specific purposes and applications:

*Circular Knitting Machines: Ideal for producing seamless tubular fabrics, such as socks, hats, and sleeves.

*Flat Knitting Machines: Used for creating flat panels of fabric, suitable for garments like sweaters, scarves, and blankets.

*Warp Knitting Machines: Employed for producing lace fabrics, tricot, and other complex knitted structures.

*Jacquard Knitting Machines: Enable the creation of intricate patterns and designs, including logos, motifs, and textures.

*Allied industries catering to knitting manufacturing -

*Lubricants & Oils: Lubricants and oils play a crucial role in maintaining the performance and longevity of knitting machinery.

*Spare Parts: Spare parts are essential for keeping knitting machinery in optimal working condition. From needles and cams to electronic components

The Indian knitting market has been experiencing steady growth in recent years, driven by factors such as rising demand for knitted garments, technological advancements in knitting

machinery, and increasing investments in the textile sector.

The domestic apparel & textile industry in India contributes approx. 2.3% to the country's GDP, 13% to industrial production and 12% to exports. India has a 4% share of the global trade in textiles and apparel.

According to reports, the Indian knitwear market is estimated at a

staggering Rs68,932 crore (approx. \$9.1 billion USD) and is projected to grow at a promising rate of 9% to reach Rs1,61,700 crore

create a stretchy and flexible textile. The type of cloth produced through knitting can vary depending on the technique used and the type of yarn employed. Common types of

knitted fabrics include Raschel, Tricot, Milanese knit, Jersey, Interlock, Rib, Purl and many more. When it comes to knitting machinery there are various types of machines, in hundreds of models offering numerous qualities.

(approx. \$21.5 billion USD) by 2027.

Knitting mills in India, particularly in regions like Ludhiana, Tirupur, Delhi, Bangalore, and Mumbai, are known for their quality and

fine techniques, making India one of the largest textile exporting countries in the world. With regions like Ludhiana & Tirupur being knitting manufacturing hubs of India, contributes significantly to India's overall textile production.

The main items of knitwear exports are men's T-shirts, ladies tops with embroidery and sequins, sportswear, jogging suits, night suits, and boxersets.

Advancements in Technology

Recent advancements in knitting machinery have revolutionized the industry, making production faster,

more efficient, and environmentally friendly. Computerized knitting machines equipped with advanced software allow designers to create complex patterns with ease, while automated processes streamline production and minimize waste. With brands experimenting with new technologies and integrating traditional methods for more efficacy, each brand's model offers unique qualities.

Latest Sustainable Fashion Trends

The fashion industry is witnessing an upward trend in sustainable fashion. From groundbreaking advancements in eco-friendly fabrics to technological advancements in machinery equipment, the apparel industry has undergone transformative shifts. This change is propelled by the emerging demand of consumers for environment friendly clothing. Following are the latest fashion trends poised to bring a change and embrace a-conscious environment.

1. **Circular Economy & Upcycling**
The advanced principles of the circular econ-

omy and upcycling are considered one of the defining strategies for waste reduction and sustainability. This strategy is aimed at keeping products in circulation for a longer duration, measuring the ecological footprint of garment production and disposal.

2. **Slow Fashion**
Slow fashion is making a comeback with consumers prioritising ethical production and environmental responsibility. As people are making reasonable choices, the slow fashion landscape is getting noticed. Put otherwise, slow fashion involving careful buying decisions that encourages lon-

gevity, thereby reducing frequent purchases.
3. **Rise in Vegan Fashion**
Recently, the notion of veganism has influenced buying decisions and permeated mainstream consciousness. The use of traditional material sourcing like wool has become a point of concern for consumers. Hence, cruelty-free alternatives such as vegan fashion are soaring in demand.
4. **Digitization and Virtual Fittings**
With digitization at its peak, the landscape of clothing shopping is experiencing a revolution. The boom of virtual fitting rooms and 3D body scanning tech-

nologies is pushing forward the notion of sustainable fashion practices. This helps them streamline inventory management and curb waste.
5. **Emergence of E-Textiles**
The introduction of e-textiles is making way for innovations. It is transforming the way consumers interact with the garment industry. The shift from traditional hard materials such as metal and plastics to trending textiles permeated with conductive fibres and yarns. This has led to increased flexibility and comfort while promoting wellness initiatives.
6. **Rise in Sustainable**

materials
The fashion industry includes sustainable fashion at its core. Sustainable fashion is linked with an eco-friendly environment and reduced carbon footprint. The adoption of sustainable materials is the driving force behind innovation and exploration. Alternatives such as food waste with material produced from fruits and vegetables are gaining prominence. Other than this, biodegradable and renewable options are ruling consumer demand in comparison to traditional fabrics.
7. **On-Demand Fashion**
The rampant issue of overproduction of gar-

ments is giving a new lease to on-demand manufacturing. On-demand fashion embraces sustainability and mitigates waste. As a matter of course, the recent fashion model will be based on retailers' predictions of consumer preferences.
8. **Eco-Friendly Dyes**
The recent environmental changes are affecting the ever-evolving fashion industry. In a recent development, eco-friendly dyes are seen overpowering traditional dyeing processes. Previously, dyeing has been considered a major contributor to pollution.
9. **Textile Recycling**

Considered a crucial and viable solution for reducing waste production, textile recycling is making a wave for its significance. From saving natural resources to reducing greenhouse gas emissions, textile recycling is a standout solution. Alongside, it is a feasible alternative to support social responsibility and the circular economy in fashion.
Conclusion
Wrapping it up, the future of sustainable

fashion is expected to witness a boom. With consumers becoming responsive to environmental concerns, sustainable fashion is on the rise. From ethical sourcing to innovative solutions, sustainable fashion choices are leading the charge. Hence, brands receptive to unfolding trends and breakthroughs are set to shape a more sustainable and eco-conscious fashion industry.

INDIA BUDGET: FM increases budget 28% for textile sector schemes

Finance Minister Nirmala Sitharaman announced a 28 per cent budget increase for the textile sector to Rs4,417.03 crore for 2024-25.

Specific allocations include Rs600 crore for cotton procurement, Rs635 crore for the Amended Technology Upgradation Fund Scheme, Rs375 crore for the National Technical Textiles Mission, and increased funding for PM MITRA. Indian government has increased budget allocation for the textile sector by 28 per cent to Rs4,417.03 crore for current fiscal 2024-25. Union Finance Minister Nirmala Sitharaman has proposed to increase budget allocation significantly for cotton procurement, National Technical Textile Mission, Integrated Skill Scheme for Skill

Development and few others schemes. The government proposed Rs4,373 crore for revenue and 43.65 crore for capital expenditure totalling Rs4,417.03 crore for various scheme and administrative expenditure. In comparison, as per revised budget of 2023-24, the government had earmarked Rs3,424.53 crore for revenue and 18.56 crore for capital

expenditure, totalling Rs3,443.09 crore. Under the Central scheme, Sitharaman announced Rs600 crore for the procurement of cotton by Cotton Corporation of India (CCI) under price support scheme. The government did not allocate any fund for the last two fiscal years as cotton prices remained above the minimum support price (MSP). However, cotton prices are

currently hovering near to MSP or below the benchmark, hence CCI will have to purchase cotton in substantial quantities during the coming marketing season beginning October 1. FM has proposed to allocate Rs635 crore for Amended Technology Upgradation Fund Scheme (ATUFS) for the current fiscal. Last year, there was allotment of Rs675 crore. It is understood that

allocated fund will be utilised to clear pending applications under the scheme which was discontinued earlier.

The government has doubled budget allocation to Rs375 crore for National Technical Textiles Mission (NTTM) from Rs170 crore of last fiscal (revised budget). However, Rs450 crore were allocated for the programme in the last fiscal (budget allocation). Under the head of Research and Capacity building, Rs45 crore were allocated for current fiscal for Production Linked Incentive (PLI) scheme for Textile. Earlier, the government had allocated Rs5 crore for the scheme. The allocation is increased to Rs166 crore from Integrated Scheme for Skill Development from Rs115 crore of last fiscal (Revised allocation). Funds for Textile Cluster Development Scheme increased to Rs100 crore from Rs70 crore. Total allocation for Research and Capacity Building increased to Rs686 crore from Rs380.50 crore. But there is no allocation for R&D in textile for the current fiscal.

Finance Minister proposed to increase funding for PM MITRA to Rs300 crore from 52.30 crore of last fiscal. FM had initially announced Rs200 crore for the ambitious scheme, but it was lowered in the revised budget. The allocation for Raw material Supply scheme also increased to Rs172.17 crore from Rs160 crore of last fiscal. The allocation for National Institute for Fashion Technology (NIFT) reduced to 98.67 crore from Rs103.13 crore of the last fiscal.
