

GMMSA EXPO 2023

The Garments Machinery Manufacturers and Suppliers Association (GMMSA) Expo has entered into its seventh edition, which starts at Dana Mandi, Bahadur Ke Road, from February 10 and will continue till February 13, 2023.

Speaking on the occasion, Ram Krishan, Chairman, GMMSA, said, "We are glad to present the seventh edition of the expo, which is being organized by the industry for the industry. Being from the industry itself, we know the problems,

expectations and desire leading brands of expo. Innovations work of the industry for new machinery to exhibit the towards reducing the technology. We find latest innovations in costs and increasing eagerness among their products in the efficiency"

Parmesh Wassist, vice-chairman, GMMSA said, "GMMSA expo is a platform that provides world's latest technology on view for the industry and goes a long way in preparing industry to be successful in the today's world."

Narinder Kumar, General Secretaryt, GMMSA, said, "Machinery manufacturers are keen to showcase their latest technology that increases productivity and help industry achieve cost efficiency in each process of knitwear industry and make it more competitive. He emphasized that exhibitions have become main mode of business promotion these days as the buyers can see the latest innovations live."

Teja Singh, President GMMSA, emphasized the need for the machinery manufacturing sector in Ludhiana to gear up its sleeves and be more competitive and hailed the efforts of leading garment

machinery manufacturers of Ludhiana. As many as 250 brands will showcase 2,000 products in the expo. Participants from India and over 20 countries will attend expo.

Best Today, Still Better Tomorrow

Confederation of British industry launches First delegation to examine FTA opportunities in India

The Confederation of British Industry (CBI) has launched its first-ever business delegation to explore FTA opportunities in India. The delegation is focusing on key growth sectors where Indian and UK businesses

can develop profitable partnerships such as innovation and sustainability. The visit also aims to share knowledge on how to scale up unicorns to addressing ways to increase trade in green goods and services between the two countries and contribute to net zero ambitions.

The ongoing three-day trip that ends tomorrow is being led by the CBI's Chief campaigns director, Syma Cullasy-Aldridge and feature some of the biggest names from British and Indian industries, including HSBC, Tide, Pernod Ricard, and ICICI Bank, CBI said in a press release.

This visit comes in the backdrop of the UK negotiating the seventh round of the free trade agreement (FTA) with India. The potential FTA could boost trade with India by £28 billion a year by 2035 and increase wages across the UK by £3 billion. The programme will bring UK businesses together with key senior stakeholders from the British High Commission in Delhi and the government of India, to discuss growth opportunities in the Indian market for UK businesses and how an FTA can help unlock them.

Syma Cullasy-Aldridge, CBI chief campaigns director,

world.”
Greg Hands, minister for trade policy at the department for international trade, said: “The UK-India relationship is going from strength to strength, so it is fantastic that the CBI is sending its first ever business delegation to India.

“India is on track to become the third largest economy with a quarter of a billion middle class consumers by

2050—so the free trade deal we're negotiating with them could unlock huge benefits for UK firms.”

TECHNOLOGY TO CUT WATER USE IN TEXTILES BY 90% - IIT ROPAR

Pic: The Indian Institute of Technology (IIT), Ropar/ LinkedIn

IITRopar has developed a suggest that the air nano-green technology called bubble dispersed in water air nano-bubble, which can reduce water reduces the quantity of consumption and chemical water used in the textile dosage by 90-95 per cent sector. The institute has which ultimately saves 90 per cent of energy claimed that the technology can reduce the consumption as well," Dr. use of water up to 90 per Nirmalkar, who has cent. As per a rough estimate, 200-250 litres of said in a press release by water are required to process 1 kg of cotton. India's ministry of science and technology.

"The laboratory reports "As one of the most water-intensive industries, there is an escalating need to address the problem of managing water use in the textile industry associated with contamination of water. At IIT Ropar, we are inventing and incorporating new-age processing methods to conserve water for our future generations," said professor Rajeev Ahuja, director, IIT Ropar. In the textile industry, water is used at many steps in fabric preparation including for dyeing, finishing chemicals in the textile substrates, desizing (process of removal of sizing material from yarn), scouring, bleaching, and mercerising (chemical

treatment of fabric to enhance affinity towards dye). At the same time the textile industry also produces the highest volume of wastewater. The major sources of water pollution are pre-treatment, dyeing, printing, and finishing of textile materials. Dr. Neelkanth Nirmalkar

describes the technology as based on nano-bubbles of air and ozone. The bubbles are hydrophobic in nature, and therefore interact better than water with the fabric and distribute chemical and dyes in the fabric much more efficiently than just water. These bubbles are of a size equivalent to

1/11000th times of human hair. Ozone nano-bubbles remove the extra dye during fabric wash and degrade the dye in the water. "Besides saving water consumption, the water after processing via a nano-bubble machine can be re-used. Nano-bubbles serve as carriers for the

processing chemical and reduce the extra chemical required. "Treatment of the garment through this patented technology helps in maintaining its real

colour for outdoor usage. It helps in obtaining 2-D effects, easy care, water repelling, and softening of fabric," said Dr. Nirmalkar.

US researchers develop woven-in labels made of photonic fibres

Pic: Marcin Szczepanski/Lead Multimedia Storyteller, University of Michigan College of Engineering

A team of researchers led by the University of Michigan has developed woven-in labels made from photonic fibres which could increase the recycling rate of clothing and textiles. Currently, only 15 per cent of the 92 million tons of textiles discarded annually are recycled due to difficulties in sorting. The new fibres, referred to as barcodes woven directly into the fabric, are customisable and can be made visible to the naked eye, only readable under

near-infrared light, or a combination of both. This technology is more effective than traditional tags which are often cut away or become unreadable, and it can be invisible until it needs to be read, the University of Michigan said in a press release. Recyclers use near-infrared sorting systems to identify materials based on their optical signatures, however, this method is limited as blended fabrics have similar optical signatures. The photonic

fibres, however, can provide a higher level of precision and can identify the composition of the fabric, making recycling more effective. The researchers achieved this by combining photonic expertise with advanced textile capabilities at MIT's Lincoln Lab, resulting in a process that is compatible with large-scale production. The photonic fibres are made from a preform which is a plastic feedstock that consists of alternating layers of

acrylic and polycarbonate. The preform is heated and mechanically pulled into a thin strand of fibre. The researchers adjusted the mix of materials and the speed at which the preform was pulled to create the desired optical properties and ensure recyclability. Although the photonic fibres are more expensive than traditional textiles, the researchers estimate that they would only result in a small increase in the cost of finished goods, approximately 25 cents.

In addition to making recycling easier, the photonic labelling could also be used to inform consumers about the origin and manufacturing process of goods and verify the authenticity of brand-name products. The researchers have applied for patent protection and are evaluating options for commercialisation. The research was supported by the National Science Foundation and the Under Secretary of Defense for Research and Engineering.

GLIMPSES OF GMMSA EXPO

CITY VIBES asked exhibitors and visitors about their experiences at the current expo. We got mixed responses from different people at the expo. The current show is the largest so far in the history of GMMSA. For the first time this year the show has expanded to 5 big halls and visitors from all over the country are visiting the show. The show has on display the latest technology in Knitting, Sewing, Dyeing, Finishing, processing and other types of machinery and there are also stall from the suppliers of accessories, yarn, Threads and allied items. There are also stall from the manufacturers and services providers of common items

required for the smooth operations of any industry. The prominent among the Ludhiana based suppliers are the Narinder International, Ramana International, Retch International, Nav Pankaj International, P K International, M H International and others from the Importer division of the GMMSA members. From the manufacturers segment there are prominent names like, Mastana International, Omex International, Guruson International, Sigma Autotex, GSL Textiles etc who are present in the show, displaying machinery. Here are the glimpses from the stalls of prominent suppliers of machinery from Ludhiana.

The Garments Machinery Manufacturers and Suppliers Association (GMMSA) Expo has entered into its seventh edition, with the current edition being held at Dana Mandi, Bahadur Ke Road, from February 10 till February 13, 2023.
