**LIST Price List 2012\_2013**

## FRAME

### ALUMINIUM

Well-known for its lightness and durability, aluminium is used in the manufacture of our models.

ALUCANE, ALURATTAN, ALUCOLOR and ALUSILVER finishes are obtained through the “powder coating” technique and are weatherproof and shock resistant.

**ALURATTAN:** a perfect imitation of natural peeled rattan with its typical lengthwise grain.

**ALUCANE:** it resembles natural unpeeled Malacca 02, with its typical knots.

**ALUCOLOR:** epoxy painted aluminium, available in some standard colours or in any colour chosen by the customer.

**ALUSILVER:** epoxy silver-painted aluminium finished with acrylic varnish.

Natural **ANODIZED** aluminium is available for **items 330** and **350** only.

### TECHNORATTAN

Technorattan is the artificial rattan, an extruded compound of synthetic resins, which is weather resistant: it is water and sea salt-proof and withstands hot as well as very cold temperatures (from -30° to +60°C).

It is available in two different colours: **BISCOTTO 30**, **GRANO 31**.

### NATURAL AND STAINED RATTAN

**Manilla 01** and **Malacca 02** are different shades of a noble material: natural rattan. This cane, for its natural protecting peel, is ideal for the frame of chairs which are going to furnish an indoor space or a sheltered outdoor. The glossy finish varnishes are very elastic and tolerate the natural shrinking and swelling of rattan.

**Stained rattan**, mainly used for our indoor collection, is a peeled cane which has been dyed and finished with half-glossy varnishes.

**All our items have a 2-year guarantee against any manufacturing fault.**

## COVERING

### TESSII and TESSIL PLUS

Tessil and Tessil Plus are technical textiles made of woven vinyl-coated polyester yarns. These covering materials, used for the seat and the back of our chairs, maintain their technical features unchanged throughout time as they are highly weather resistant: they withstand temperature ranges from -20° to +60°C, sea salt and UV rays action. They are fire-retardant, water-proof, offer excellent resistance to wear, tear and soiling.

Fixed with techniques that grant their endurance throughout time, these meshes offer the possibility of being customized with a pvc logo, which - like Tessil and Tessil Plus - is resistant to colour-fading. Tessil and Tessil Plus are guaranteed 4 years against structural decay.

For proper maintenance and care of outdoor sitting products covered with Tessil and Tessil Plus, we recommend to wash them at least one per year with our detergent "Energy MSF".

### NYLON

Nylon-polyamide 6 monofilaments, used to hand-weave the seat and the back of some of our models (standard weaves: 2x2, 3x1), have an average life of 5/6 years, are not thermosensitive, withstand insect attacks, and preserve their characteristic properties unchanged between -5° and +40°C. (Warning! In dry and hot indoor places NYLON-polyamide 6 exhausts faster).

It is available in 13 different colours that can be combined.

### RILSAN

Rilsan-polyamide 11, a stronger alternative to nylon weaves (standard patterns 2x2, 3x1), is derived from castor-oil extracts.

It has an average life of 10 to 12 years, it is not thermosensitive, and withstands insects attacks. It offers an excellent UV-rays resistance and withstands very low as well as very high temperatures (from -50°C to +70°C). Due to the superior mechanical properties of this monofilament, Rilsan weaves suit any type of environment.

It is available in 13 different colours that can be combined.

**All our items have a 2-year guarantee against any manufacturing fault.**
