

| 360 UNDERCOVER®

TARGET PESTS AND DISEASES AT THE SOURCE

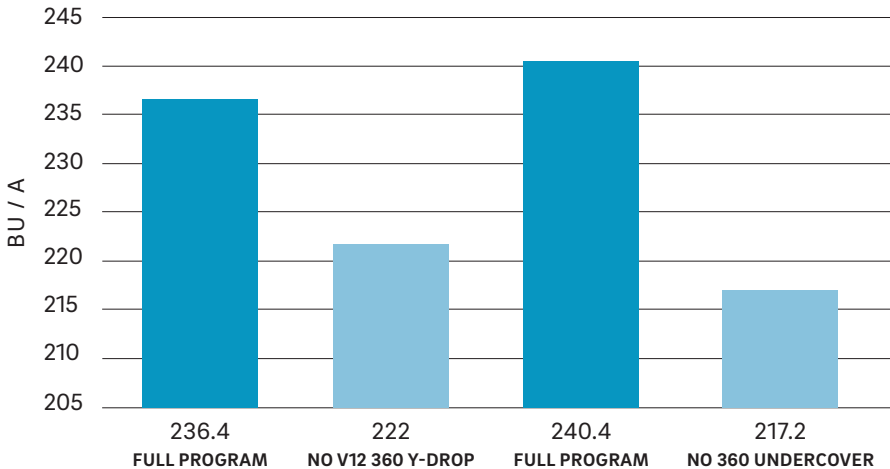

Many diseases and insects originate from the base of the plant and work their way into the canopy. Traditional application methods target the top of the plant and product often doesn't make it down to the target leaves.

360 UNDERCOVER® makes in-canopy application possible - in corn, seed corn, soybeans, wheat, cotton, sugar beets, sorghum and more.

DON'T LET DISEASE WIN

White mold, bacterial blights, spider mites, white flies, sugarcane aphids and soybean aphids can have a strong negative impact on plant health and yield potential, so it's important to closely monitor these diseases and pests throughout the development of your crop. Get more precise coverage to target these pests under the canopy with 360 UNDERCOVER.

360 UNDERCOVER BOOSTS YIELD

FULL PROGRAM:

105 lbs Broadcast 32% Applied // 65 lbs N Applied via 360 Y-DROP // 70 lbs N Applied via 360 Y-DROP // Fungicide Applied via 360 UNDERCOVER

Visit www.360yieldresults.com for details.

KEY FEATURES

- A** Easy add-on to the 360 Y-DROP system - slides up and down the riser for in-canopy positioning depending on crop growth stage.
- B** Up to four multi-directional spray nozzles on each unit for customized spray patterns and 150-degree horizontal spray application. Special shell design protects nozzles and moves smoothly under crop canopy.
- C** Compare coverage on the underside of the leaf - the photo shows 360 UNDERCOVER vs aerial application.

JASON BATEMAN // ELBERTA, UTAH

"Even though our sprayer is on 15" spacings and we tried to get the application low and in there, the weeds were tough and under the leaves, so we couldn't get to them. We had one chance to get it and if we didn't we were done. Now with 360 UNDERCOVER, we don't even worry about it, it goes in there and just fries it. Now our fields are beautiful and clean."
