

TEFLON SPRAY GUN

Wherever hostile environments exist (such as semiconductor fab plants) **NACOM'S PTFE D.I WATER SPRAY GUNS** can be found mounted on wet stations, and work process stations.

Designed for DI water spray, PTFE/Poly constructed sprayers have become accepted as a industry standard. This is because the gun may be exposed to corrosive acids thru operator handling.

In addition to our guns with threaded nozzles, **NACOM** now offers a hand sprayer with 1/8" threaded cap for easy connection to custom spray patterns. Sprayers are sold separately or with hose assemblies. Private labeling is available upon request.

NACOM'S PTFE NITROGEN GUNS deliver the optimum in anti-corrosion protection and long lasting duty wherever harsh chemicals are used in the vicinity of N2 dispensing/ drying.

Manufactured of PTFE and POLY like the DI Spray gun, the N2 guns resist fume attack. Moreover our N2 guns unique design eliminates costly nitrogen leaks. Guns are available in 3 body styles for you to choose from and are sold with or without coiled hose assembly.

NACOM'S PTFE DISPENSE GUNS use the same body as the DI water gun with the addition of a long dispense / pour spout extending from the spray head of the gun.

A Complete line of PTFE GUNS for Fluid Handling, and Drying Applications
