Efficiently manage inventory and manufacturing processes in a single platform.

The Challenge

Limited inventory visibility leads to time-consuming and costly physical counts and forecasting difficulties

How Fishbowl Helps - Real-time inventory tracking

Fishbowl's centralized system enables tracking and management of all inventory, automating stock counts and providing consolidated reports for forecasting.

The Challenge

Manual inventory monitoring results in missed sales opportunities and time-consuming purchase processes.

How Fishbowl Helps - Efficient, accurate, purchasing management

With Fishbowl, you can set automated reorder points and customizable thresholds in trigger notifications or auto-generated purchase orders to ensure inventory availability.

The Challenge

Manual order management causes inefficiencies in receiving, picking, and shipping.

How Fishbowl Helps - Real-time inventory tracking

Fishbowl's bar-code and scanning capabilities streamline order management with automated pick lists and mobile app support.

The Challenge

Limited visibility slows accurate reporting on company-wide operations.

How Fishbowl Helps - Save time generating valuable insights

Fishbowl offers a library of customizable reports and easy report generation for efficient analysis.

The Challenge

Spreadsheets are not scalable, and implementing an inventory management system is costly and time-consuming.

How Fishbowl Helps - Quicker, easier path to automation

Fishbowl provides robust features, pre-built reports, and the guidance of an Implementation Specialist for a faster ROI in 6 to 8 weeks on average.
