

Design-Build

Principal Robert Jordan has a long history in the design-build world, starting in 1998, as a Project Architect and Project Manager with a large Metro-Detroit Design-Build Contractor. During his time with this Company, Mr. Jordan completed dozens of design-build projects, primarily in the light industrial and office sectors, including a number of industrial and office park developments. His experience during this time period also includes time in the field, on job sites, observing and overseeing construction. Since that time, design-build has continued to be a large part of Mr. Jordan's career. To date, he has completed design-build projects in numerous market sectors including: light industrial, heavy industrial, medical, educational, municipal, aviation, transit, hospitality, office, and commercial.

As you can see, Mr. Jordan brings a level of experience to you, that few others can match. He understands the construction process, how to work with you to ensure economical constructability, and how to work with you to design and engineer within the project budget. Finally, he understands that not all projects are to be viewed as "career" projects and that, many times, design must take a backseat to practicality and economy.

- 25 plus years of design-build experience in many project types
- Vast pre-engineered metal building experience
- Practical and pragmatic project approach
- Understanding of the need for economy and constructability
- Willingness to not do "big design" when it is not needed
- Ability to do "big design" when it is needed
- Field construction experience
- Willingness to assist with up front work in the bidding process
