

Wounds We Treat

We treat all wounds, including:

Diabetic Foot Ulcers

Pressure Ulcers

Venous Ulcers

Post-Surgical Wounds

What to Expect

Communication

Our team will keep you informed of your patient's care plan, working with you to optimize their overall health.

Expedient Care

Our care team understands the importance of time in healing wounds and preventing amputations.

Evidence-Based Treatment

You can expect state-of-the-art, evidence-based treatment for your patients. Continuing education is a keystone of our program.

Specialized Electronic Health Record

With integrated clinical and regulatory tools, the EHR optimizes care and outcomes while tracking vital metrics in real time.

Prevention

Our team deploys education and technological advances to reduce rates of recurrence.

Medical Director

David M. Young, MD is a Yale-trained plastic surgeon with more than 30 years of experience specializing in wound healing, reconstructive surgery and burn care. Dr. Young currently serves as medical director at Marin Comprehensive Wound Center, where he guides a multidisciplinary team delivering advanced healing treatments.

DIABETES

The leading cause of limb loss, taking more than 65,000 extremities annually

TWO MILLION

Number of people in the US with a diabetic foot ulcer

74%

Percentage of patients with diabetic foot ulcers that can **avoid** an amputation by being treated in a limb preservation center

EDUCATION

The best way to prevent an amputation is through teaching patients the benefits of early detection

(415) 295-7107
