

**A rating of 0 indicates a low hazard, whereas a 4 would indicate high hazard. The diamonds are color-coded for quick reference:**

- blue for health hazard
- red for flammability
- yellow for chemical reactivity (NFPA) or physical hazard (HMIS®)
- white for another special hazard (NFPA) or personal protection (HMIS®)

**NFPA Rating:** Health: 1  
Flammability: 1  
Instability: 0  
Specific Hazard: N/A

**HMIS® Rating:** Health: 1  
Flammability: 1  
Physical Hazard: 0  
Personal Protection Index: C

## Is resin flammable when wet?

Entropy Resins epoxy resins and hardeners are classified as **non-flammable** because their flash points are greater than 200°F (93 and they evaporate slowly. Furnaces, wood stoves, and other heat sources do not pose a serious fire hazard in the presence of epoxy vapors.
