

68 Series Aluminium Casement Window Thermal Break with Integrated Screen

The VistaHaus 68 Series Aluminium Casement Window delivers a refined combination of thermal performance, acoustic comfort, and everyday practicality designed for modern Australian homes.

Built around thermal-break aluminium profiles, the 68 Series provides effective insulation and strong structural stability, helping to reduce heat transfer while maintaining smooth, reliable operation. The integrated high-transparency screen is seamlessly incorporated into the system, offering insect protection without the need for additional fittings or visual clutter.

A multi-channel sealing system, paired with insulated glazing options, enhances resistance to external noise, heat, and dust, supporting a quieter and more comfortable indoor environment. Designed for ease of use, the window operates smoothly and quietly, making it well suited to frequently used living spaces.

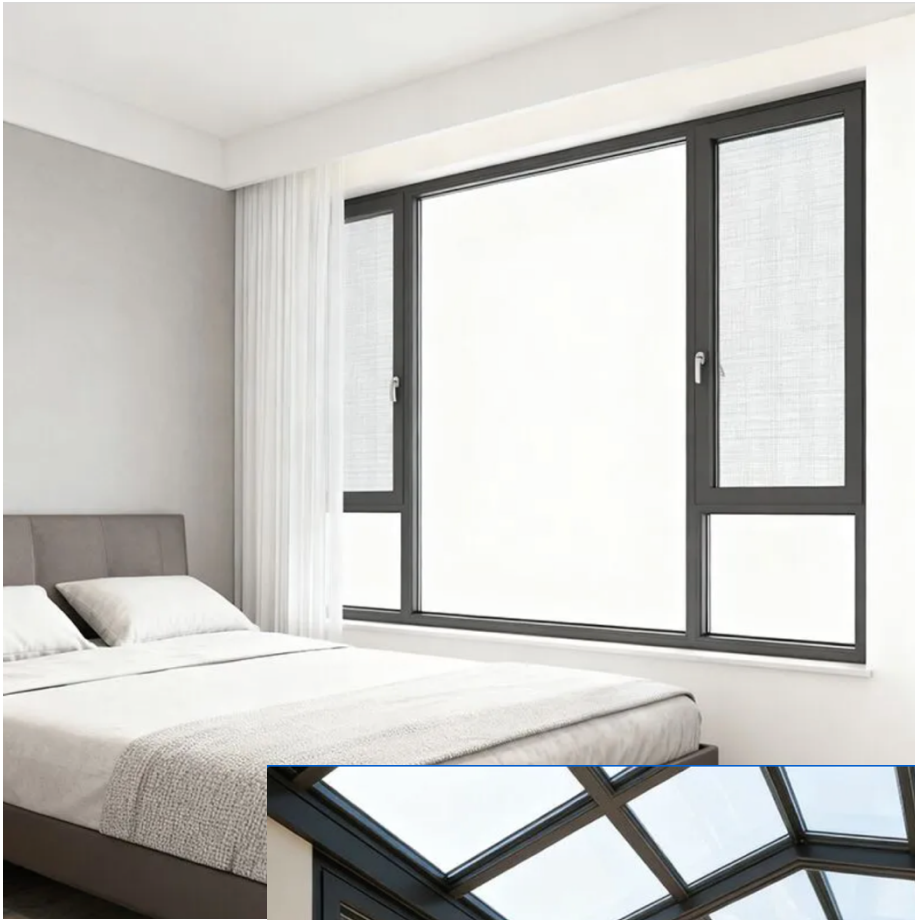

The 68 Series is an ideal solution for bedrooms, living rooms, and studies, particularly in homes seeking improved energy efficiency, clean detailing, and integrated mosquito protection.

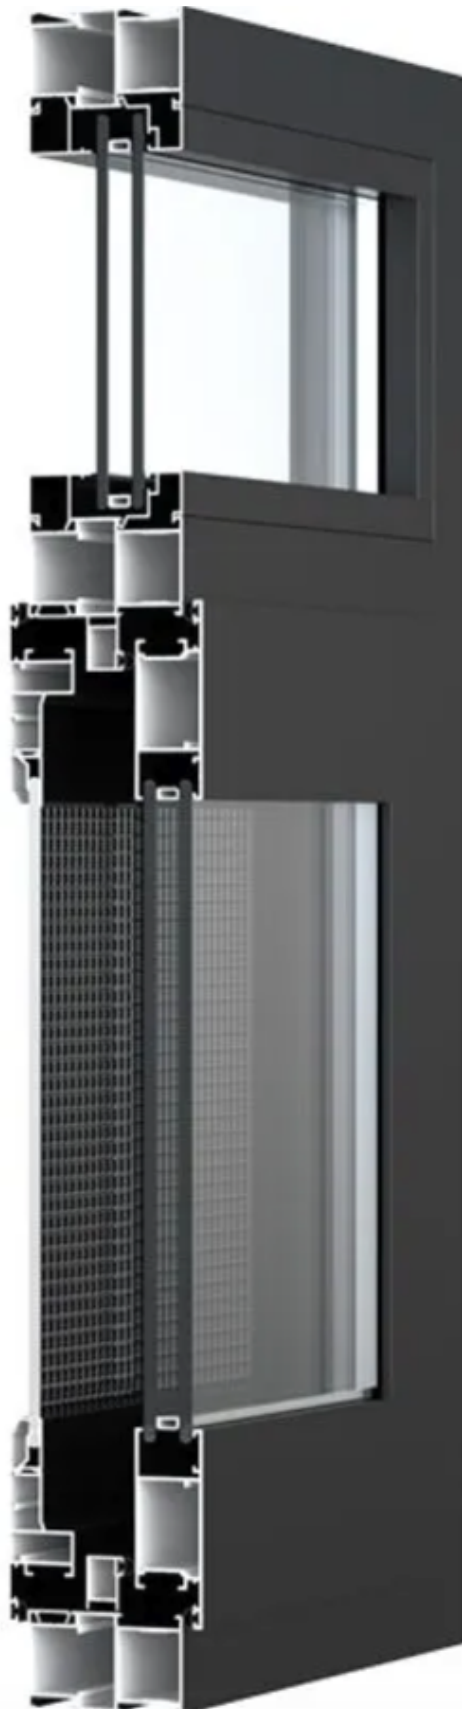

Key Features

- Thermal-break aluminium profiles for improved energy performance.
- Integrated high-transparency insect screen.
- Multi-channel sealing system for enhanced acoustic and weather performance.
- Compatible with insulated glazing.
- Smooth and quiet opening and closing operation.
- Clean, space-efficient design with no add-on screens.
- Low-maintenance aluminium construction.
