

108 Series Aluminium Casement Window Thermal Break with Integrated Mesh

The VistaHaus 108 Series Aluminium Casement Window is a refined, high-end system designed for premium residential architecture where detail, performance, and finish matter.

Featuring a flush interior frame design, the 108 Series delivers a clean, understated aesthetic that integrates seamlessly into contemporary living spaces. Thermal-break aluminium profiles provide effective insulation, while a multi-channel sealing system with EPDM gaskets enhances weather resistance, air tightness, and long-term durability.

The system is supplied with a full suite of high-quality hardware and supports double-glazed, insulated tempered glass configurations, improving both thermal efficiency and acoustic comfort. An integrated mesh screen is built into the system, providing insect protection without compromising visual clarity or interior lines.

Designed for flexibility and ease of use, the screen opens inward, while the glass sash can be configured to open outward or tilt downward, allowing controlled ventilation to suit different spaces and conditions.

The 108 Series is ideally suited to high-end homes and architecturally designed residences seeking a premium window system that combines performance, refined detailing, and everyday comfort.

Key Features

- Thermal-break aluminium profiles for improved insulation.
- Flush interior frame design for a refined architectural finish.
- Integrated mesh screen with discreet detailing.
- Multi-channel EPDM sealing system for enhanced weather resistance.
- High-quality hardware supplied as standard.
- Compatible with double-glazed insulated tempered glass.
- Flexible opening options for controlled ventilation.
