### **Pull rolled cable from the middle**

Don't rip open the plastic wrapper on your spool of cable. Instead, lift a handful of coils from the center of the roll and lay them on the floor. Four loops equals about 12 ft. Following this method helps reduce tangles and keeps the cable contained for easier transporting and storage. If you plan to use all of the cable, just neatly unroll the entire spool across the floor (as if it were a garden hose) to avoid kinks, curls or twists in the cable.
