24 Simmental Bulls || 20 Red Angus Bulls || 10 Angus Bulls || 4 Charolais Bulls || 2 Simmental Heifers || 8 Red Angus Heifers || 5 Angus Heifers

# DEAR CATTLEMEN & FRIENDS,

First of all, we want to take this opportunity to welcome you all to our 11th Annual Production Sale. We especially want to thank our return customers for your loyalty and our new customers for your interest in our program. We are pleased to offer an excellent set of bulls and heifers and look forward to assisting you in selecting your next herd sire or foundation female.

We hope you fared this latest round of extreme cold temps well and that your cattle are thriving. The prices at the sale barns this year have been reflecting the incredible value of this area's cattle and we are always happy to hear back from past customers about their Homestake Ranch sired calves and their successes.

Once again, all heifers have been pelvic measured and confirmed open. Bulls will be semen tested after the sale as we prefer to take all of the bulls home so we can semen test every bull before delivery and fully guarantee fertility and performance. This gives us the opportunity to deliver your cattle at a later date and allows us to have plenty of time to visit you at your operation – our favorite part!

Our cattle are bred with the commercial cattleman's profitability in mind and they must thrive in real-world situations – nothing is spoiled or

pampered here. Though we observe EPD's as a useful tool, they are never the determining factor for our breeding decisions. We focus on performance and maternal genetics as we know the importance of producing muscle, eye appeal, and fleshiness on top of sound feet and legs. And, remember, any heifers purchased on the sale can return to our ranch and be Al'd to any bull in our tank and later delivered to you at no extra charge.

You are welcome to come to the ranch to view the cattle at any time. We look forward to seeing you on February 26th in Huron!

#### Cattle & Sale Information

-Save \$25 per head for bulls taken home the day of the sale. Bulls taken home by Homestake Ranch will be semen tested prior to delivery at our expense. Bulls will be kept free of charge until April 25th. Free Delivery within 200 miles. We will work with the buyer for distances further than that.

-All heifers have been pelvic measured, palpated, and confirmed open by the Huron Veterinary Hospital. If the buyer prefers, we will take heifers home, Al them to any bull in our tank (some exceptions) or with semen provided by the buyer, a nd deliver them by May 15th.

- -Every heifer purchased by a junior member will receive \$50 if they send a picture if it being exhibited at their County Achievement Day, Spotlight or State Fair.
- All cattle sell under the terms and conditions of the American Angus Association, American Simmental Association and the Red Angus Association of America - breed dependent.
   Announcements made sale day and from the auction block during the sale, take precedence over printed material associated with this sale.

-We will not be responsible for death or injury.

-Homestake Ranch will reserve 1/3 semen interest and the right to collect semen on any bull sold in this sale (for in-herd use only). This would be done at seller's expense and buyer's convenience.

#### Insurance

Bull Mortality and Loss of Use insurance available through Betsy Schroeder, Krohmer Agency (605) 539-1871. Must be contacted within 24 hours of the sale.

Homestake Ranch Herd Veterinarian Huron Veterinary Hospital (605) 352-6063

Homestake Ranch Livestock Nutritionist Colin Geppert, Hubbard Feeds (605)682-9161

# IN THE OFFERING

24 Simmental Bulls
20 Red Angus Bulls
10 Angus Bulls
4 Charolais Bull
12 Simmental Heifers
8 Red Angus Heifers
5 Angus Heifers

# Every heifer purchased by a junior member

will receive \$50 if they send a picture of it being exhibited at their County Achievement Day, Spotlight or State Fair.

# Let us breed them for you!

If the buyer prefers, we will take heifers home, AI them to any bull in our tank (some exceptions) or with semen provided by the buyer, and deliver them by May 15th.

View the Auction Live! Bid Online... you're ringside right at your desk!

Buying online is as easy as 1, 2, 3...

- Create an account at www.DVAuction.com under the "Register" tab
- 2. Apply for bidding approval by clicking on the "details" tab at least 24 hours prior to the auction a DV representative will notify you once you have been approved.
- 3. Tune in for the sale to make your purchases!

High Speed internet is required for successful bidding-be sure to check the lag-time monitor in the top left corner to ensure real-time broadcasts.

Proxy-bidding – if you can't make time to watch the sale, register a proxy bid and let our system represent your bid while you're away. Look for the"proxy bid" tab on the auction listing, and fill in your maximum bids.

We'll handle the rest!

For General Questions Please contact Our Office: 402-316-5460 or support@dvauction.com

# Simmental Guide to EPDS

simmental.org

#### BELOW IS A QUICK REFERENCE TO AN EXPLANATION OF EPD'S:

Expected Progeny Differences "EPD's" are the most accurate and effective tool available for comparing genetic levels. In using the EPD differences between two sires EPD's represents the unit difference expected in the performance of their progeny. (Listed below are the units ASA EPD's are expressed in).

(Average EPD's are on the bottom of the percentile table above ) Calving Ease (CE) percentage of unassisted births when used on heifers.

Birth Weight (BW) pounds of birth weight.

Weaning Weight (WW) pounds of weaning weight.

Yearling Weight (YW) pounds of yearling weight.

Maternal Calving Ease (MCE) percentage of unassisted births in first-calving daughters.

Maternal Milk (MM) pounds of weaning weight due to milk. Maternal Weaning Weight (MWW) pounds of weaning weight due to milk and growth.

Stayability (Stay) percent of daughters remaining in the cowherd at 6 years of age.

Carcass Weight (CW) pounds of carcass weight.

Yield Grade (YG) yield grade score.

Yield grade is an indication of the yield of red meat within a carcass. It is calculated by using several factors including 1) fat thickness, 2)

kidney, pelvic and heart fat. 3) hot carcass weight 4) rib eye area. A (–) EPD is better.

Marbling (MRB) marbling score.

**Indexes:** The last two columns in the EPD section are fairly new to the Simmental breed, but interesting, they are \$ indexes. Though EPD's allow for the comparison of genetic levels for many economically important traits, they only provide a piece of the economic puzzle. That's where \$ indexes blend EPD's & economics to estimate an animal's overall impact on your bottom line.

All Purpose Index: (API) It is exactly what it says, all purpose. This index includes every trait that can be calculated: calving ease, pounds at weaning and yearling, keeping replacements back, milking ability and stayability, then the calf crop. It took into consideration, some being retained as replacements, then the rest being fed out and sold grade and yield.

**Terminal Index (TI):** This index is to be used if all calves are going to a feedlot. It evaluates a sire only for use on mature cows with all calves put on feed and sold grade and yield. No other factors were figured in.

**Using API and TI:** First determine which index to use. If you're breeding heifers and keeping replacements, use API. If all calves are going to the feedlot and finished, use TI.

BLACK // POL	LED									

This was an easy decision to use 485 as the leadoff bull. He checks all the boxes we look for in a herd sire. He is incredibly powerful, deep ribbed, thick butted, and is smooth when on the move. His natural sogginess and volume combined with his carcass trait EPDs make him a steer sire machine.

BLACK // P	OLLE	)								

Half sibling to lot 1, this bull shares many of the same traits with a smaller frame. His smoothness in his front end, stylish profile, and respectable EPDs lead us to believe he will he a calving easy heifer bull option but will not give up any growth for his calves.

RED // POLLED

This bull could arguably be the best red simmental bull on the offering this year, but we had a sorting miscommunication with a lost tag on picture day, so we moved him down a lot. He is hard to fault and Keith says "he is the most dominant red bull we have maybe ever raised" His dam is 12 years old but still weaned off a calf that ratioed 116 at 748 lbs adj. Will retain semen interest.

# **RED ANGUS GUIDE TO EPDS**

#### RedAngus.org

**ProS.....** Profitability and Sustainability is an all-purpose index that predicts average economic differences in all segments in the beef supply chain. This index is a combination of the breeding objectives modeled in the HerdBuilder and GridMaster selection indexes. In this index, replacement heifers are retained from within the herd and all remaining progeny are fed out to slaughter and sold on a quality-based grid. Traits included in this index include calving ease, growth, HPG, STAY, Mature Weight, Dry Matter Intake and carcass traits. The resulting index is expressed in dollars per head born (Index/High Value).

HB ...... HerdBuilder is a maternal selection index that predicts the economic differences of animals for traits that are important from conception through weaning. Expressed as dollars per head born, HB is calculated based on the scenario that bulls are mated to heifers and cows, replacement heifers are retained and all remaining progeny are marketed at weaning. Traits included in the HB index include Calving Ease Direct, Calving Ease Maternal, Weaning Weight, Milk, Mature Weight, Heifer Pregnancy and Stayability (Index/High Value).

**GM......** GridMaster is a selection index that predicts the average economic difference of non-replacement calves through the post-weaning phase of production. GM places selection pressure on growth, feedyard performance and carcass traits. Expressed as dollars per head born, GM is calculated based on the scenario that progeny are fed out to slaughter and marketed on a quality-based carcass grid. Traits included in GM include Average Daily Gain, Carcass Weight, Dry Matter Intake, Marbling, Back Fat and Rib Eye Area (Index/High Value).

**CED**......Calving Ease Direct predicts differences in the percent of calves born unassisted out of 2-year-old dams. (Percent/High Value)

**BW** ....... Birth Weight predicts differences in actual birth weight of progeny. (Pounds/Low Value)

**WW** ...... Weaning Weight predicts differences in 205-day weaning weight. (Pounds/High Value)

YW ...... Yearling Weight predicts differences in 365-day yearling weight. (Pounds/High Value)

**ADG**...... Average Daily Gain predicts differences in weight gain between 205 and 365 days of age. (Pounds/High Value)

**DMI** ...... Dry Matter Intake predicts differences in daily feed intake as measured in a feedlot during the post-weaning period. (Pounds/Low Value)

MILK ..... Milk predicts differences in weaning weight attributed to the milking ability of the animal's daughters. (Pounds/High Value)

ME ...... Maintenance Energy predicts the difference in maintence energy requirements. (Mcal per Month/Low Value)

**HPG**...... Heifer Pregnancy predicts differences in the percent of daughters who are able to conceive and calve at 2 years of age following exposure to breeding. (Percent/High Value)

**CEM** ..... Calving Ease Maternal predicts differences in the percent of daughters who are able to calve unassisted as 2-year-old heifers. (Percent/High Value)

**STAY**..... Stayability predicts differences in the ability of an animals' retained daughters to remain productive in the herd – calve every year – through 6 years of age. (Percent/High Value)

MARB.... Marbling predicts differences in marbling score – amount of intramuscular fat measured at the 13th rib. (Marbling Score Units/High Value)

YG....... Yield Grade predicts differences in USDA Yield Grade, which is calculated using CW, REA and Fat. (Yield Grade Units/Low Value)

**CW** ...... Carcass Weight predicts differences in actual hot carcass weight. (Pounds/High Value)

**REA**...... Ribeye Area predicts differences in square inches of ribeye area measured at the 13th rib.(Square Inches/High Value)

**FAT**...... Fat predicts differences in the depth of backfat measured between the 12th and 13th ribs. (Inches/Low Value)

# Dollar value indexes, or SValues, are a tool used to select for several traits at once based on a specific breeding objective. An economic index approach takes into account genetic and economic values as well as the relationships between traits to select for profit.

# **American Angus Association \$Value Indexes**

Maternal Weaned Calf Value (\$M), an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. \$M is built off of a self-replacing herd model where commercial cattlemen replace 25% of their breeding females in the first generation and 20% in subsequent generations. Remaining cull females and all male progeny are sold as feeder calves. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), an index expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. \$W assumes that producers retain 20% of their female progeny for replacements and sell the rest of their cull female and male progeny as feeder calves. Over time, increased selection pressure on \$W will increase weaning and maternal milk traits while also continuing to increase mature cow size.

**Feedlot Value (\$F)**, an index expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for

**Grid Value (\$G)**, an index expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

quality and yield grade.

Beef Value (\$B), an index expressed in dollars per carcass, facilitates simultaneous multi-trait genetic selection for feedlot and carcass merit. \$B represents the expected average differences in the progeny post-weaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a quality-based carcass grid.

Combined Value (\$C), an index expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid.

These first 3 Charolais bulls are consigned by Sioux Warrior Cattle Company- Jason Wells. This bull is the only 2-year old bull in the offering. Hard As A Rock was a bull in the 2012 NWSS Reserve Champion pen of 5. Later on sold to Sandmeier Charolais and became a herd sire for them for many years. Definitely a performance bull.

4213 is a full ET sibling to the only Charolais bull in last year's sale that sold to Steve Boomsma for \$5000. He is smooth shouldered, wide based, and as wide as you want.

# USING CHAROLAIS EPDS

# FOR SELECTION

**Birth Weight EPD (BW)** The expected difference in average birth weight (pounds) of progeny. Birth weight reflects prenatal growth.

Calving Ease Direct (CE) is expressed as a difference in percentage of unassisted births in first calf heifers. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire's calves will be born when bred to first-calf heifers.

Calving Ease Maternal (MCE) is expressed as a difference in percentage of unassisted births in first calf daughters. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

**Weaning Weight EPD (WW)** The expected difference in average weaning weight of calves. The evaluation reflects the genetic influence on pre-weaning growth rate.

**Yearling Weight EPD (YW)** The expected difference in average yearling weight of progeny. The evaluation reflects genetic influence on both pre-weaning and post-weaning growth rate.

**Maternal Milk EPD (Milk)** The genetic ability of a sire's or dam's daughters to express in pounds of weaning weight in her calves due to her maternal ability through mothering instinct and milk.

**Total Maternal EPD (MTL)** A value to predict the weaning weight performance of calves from a animal's daughters due to genetics for growth and maternal ability. Total Maternal is calculated by adding ½ the WW EPD to the Maternal Milk EPD.

**Scrotal Circumference EPD (SC)** The expected difference in scrotal circumference (expressed in centimeters) of a bull's or dam's male offspring at yearling compared to progeny of all other animals evaluated. Research has also indicated a relationship between increased SC EPD and decreased age at puberty for daughters.

Carcass records are adjusted to an age constant endpoint. Therefore selection based on any or all of the carcass merit EPD are comparable among cattle at the same age endpoint. For example selection based on increased EPD for carcass weight will result in heavier carcass weights than those animals with lower EPD for carcass weights when the cattle are harvested at the same age.

Carcass Weight EPD (CW) Expected progeny differences for Carcass Weight is a predictor of pounds of retail product at a constant age endpoint. Selection for increased values should result in heavier carcasses, while selection for decreased values should result in lighter carcass weights at the same age endpoint. Carcass Weight EPD are expressed in pounds and is a predictor of the differences in hot carcass weight between parents progeny at an age constant endpoint.

Ribeye Area EPD (REA) Ribeye area is measured from a cross-sectional area of the longissimus dorsi muscle at the 12th rib. Ribeye area is a major component of the USDA yield grade equation and selection for increased ribeye area should result in larger ribeyes and lower yield grades between animals with the same carcass weight. Ribeye area has a positive relationship with weight, the larger the animal the larger the ribeye area. Ribeye Area EPD are expressed in square inches and is a predictor of differences in ribeye area between parents progeny at a constant age endpoint.

Fat Thickness EPD (FAT) Fat thickness is measured at the 12th rib and is the primary component to the USDA Yield Grade equation. Fat thickness has a negative relationship to cutability; therefore, selection base on decreased fat thickness should result in lower yield grades and leaner cattle given the same age endpoint. Fat Thickness EPD are expressed in inches and are a predictor of differences in fat thickness between parent's progeny at an age constant endpoint.

Marbling Score (MARB) Marbling is a subjective measure of the amount of intramuscular fat in the ribeye muscle. Marbling score is the primary component of USDA Quality grade and selection for increased Marbling Score EPD should result in cattle with higher quality grades at the same age endpoints. Marbling score has a small genetic correlation with fat, therefore producers may select for increased marbling score EPD while not changing external fat thickness when cattle are harvested at the same age-constant endpoint. Marbling EPD is a prediction of the differences in the USDA subjective marbling score between parent's progeny at an age constant endpoint. Marbling is expressed in the same units as the USDA Marbling Score (see table below), see the accompanying table for USDA Marbling Score in the Carcass Section.

**Terminal Sire Index (TSI)** The AICA Terminal Sire Index (TSI) is a formal method of combing Expected Progeny Differences (EPD) – BW, WW, YW, REA, CW, MARB and FAT – into one single value on which to base selection decisions. The TSI uses estimates of the genetic relationships between traits with an economic default value based on three year rolling USDA data.

The TSI represents a dollar index per terminal progeny produced for a bull in the AICA database, ranking them for profit potential. This dollar index is to be interpreted much like single trait EPD. For example, if Sire A's index is \$191.66 and Sire B's index is \$200.00, then we would expect Sire B's offspring to average \$8.34 more net return (\$200.00 minus \$191.66) than Sire A's offspring.

We are really pleased with the group of heifers we are offering this year. We know we can't keep them all even if we want to! 4170 is a heifer that has stuck out since birth. She is very clean and smooth in her design while also exhibiting power and performance. She sports weaning and yearling weight ratios of 110 and several EPDs in the top 10% of the breed. We wouldn't be surprised to see her in the show ring or donor pen down the road.

432 may be the most attractively profiling heifer on the sale. She is smooth and extended through her front end, feminine, and nice to look at. She has two popular bulls in her pedigree with Rest Easy and Raptor – we'd bet she'll be a difference maker in any herd.

### Let us breed them for you!

If the buyer prefers, we will take heifers home, AI them to any bull in our tank (some exceptions) or with semen provided by the buyer, and deliver them by May 1

# Every heifer purchased by a junior member

will receive \$50 if they send a picture of it being exhibited at their County Achievement Day, Spotlight or State Fair.

The Red Angus heifers just may be the most consistent group from top to bottom that we have ever put up for sale. Every year it is a negotiation between Keith and I on a few heifers he picks for the sale. My loss is your gain with this heifer. She is pretty hard to pick apart. She is deep ribbed, complete, and fancy. The only Opportunity sired animal in the sale. Top 3% WW Epd and top 6% YW Epd.

Jacob has worked up to enough numbers he finally decided to sell some open heifers by customer request. 423 is a fancy one to start off with. She is feminine in her design, moderately framed and will no doubt be a great cow.

This heifer may be the best of the 5 angus heifers. She is nice fronted, strong topped and would work in the show ring and the pasture.

Thick thick! She will make an excellent brood cow. Note her 117 weaning ratio.

472 is moderate but very complete. She is super correct and puts all the pieces together.

You have to love the length of body on her. She is feminine and will mother some great calves.
