

HOMESTAKE RANCH

12th Annual Bull & Heifer Sale
Wednesday, February 25, 2026; 1pm CDT

Huron Continental Marketing, Huron, SD

26 Simmental Bulls • 19 Red Angus Bulls • 11 Angus Bulls • 2 Charolais-Bulls
10 Simmental Heifers • 10 Red Angus Heifers • 5 Angus Heifers
• 5 Commercial Simmental Heifers •

Dear Cattlemen & Friends,

Welcome to our 12th Annual Production Sale. We especially want to thank our return customers for your loyalty and our new customers for your interest in our program. We are pleased to offer an excellent set of bulls and heifers and look forward to assisting you in selecting your next herd sire or foundation female. Sale barn prices are still reflecting the incredible value of this area's cattle and we are always happy to hear from our customers about their Homestake Ranch sired calves and their successes.

Once again, all heifers have been pelvic measured and confirmed open. Bulls will be semen tested after the sale as we prefer to take the bulls home so we can semen test every bull before delivery and fully guarantee fertility and performance. This gives us the opportunity to deliver your cattle at a later date and allows us to have plenty of time to visit your operation.

Our cattle are always bred with the commercial cattleman's profitability in mind and they must thrive in real-world situations – nothing is spoiled or pampered here. Though we observe EPD's as a useful tool, they are never the sole determining factor for our breeding decisions. We focus on performance and maternal genetics as we know the importance of producing muscle, eye appeal, and fleshiness. And, remember, any heifers purchased on the sale can return to our ranch and be AI'd to any bull in our tank and later delivered to you at no extra charge.

You are welcome to come to the ranch to view the cattle at any time. We look forward to seeing you on February 25th in Huron!

Keith & Amanda Larsen

Homestake Ranch
38405 US Hwy 14
Wolsey, SD 57284
Keith Larsen's Cell (605)350-5517
Amanda Larsen's Cell (605)350-0076
Jacob Kahre's Cell (605)354-5878
Sale Barn Phone (605)352-8682
Homestake.Ranch@outlook.com
www.homestakeranch.com

Located 6 miles NW of Wolsey, SD on US Highway 14 or 8 miles East of Wessington, SD on US Highway 14.

Let us breed them for you!

If the buyer prefers, we will take heifers home, AI them to any bull in our tank (some exceptions) or with semen provided by the buyer, and deliver them by May 1

Every heifer purchased by a junior member

will receive \$50 if they send a picture of it being exhibited at their County Achievement Day, Spotlight or State Fair.

12TH ANNUAL BULL & HEIFER SALE
WEDNESDAY, FEBRUARY 25, 2026

HURON CONTINENTAL MARKETING • 39763 US HWY 14 • HURON, SD

Cattle & Sale Information

- Save \$25 per head for bulls taken home the day of the sale. Bulls taken home by Homestake Ranch will be semen tested prior to delivery at our expense. Bulls will be kept free of charge until April 25th. Free Delivery within 200 miles. We will work with the buyer for distances further than that.
- All heifers have been pelvic measured, palpated, and confirmed open by the Huron Veterinary Hospital. If the buyer prefers, we will take heifers home, All them to any bull in our tank (some exceptions) or with semen provided by the buyer, and deliver them by May 15th.
- Every heifer purchased by a junior member will receive \$50 if they send a picture if it being exhibited at their County Achievement Day, Spotlight or State Fair.
- All cattle sell under the terms and conditions of the American Angus Association, American Simmental Association and the Red Angus Association of America - breed dependent.
- Announcements made sale day and from the auction block during the sale, take precedence over printed material associated with this sale.
- We will not be responsible for death or injury.
- Homestake Ranch will reserve 1/3 semen interest and the right to collect semen on any bull sold in this sale (for in-herd use only). This would be done at seller's expense and buyer's convenience.

Insurance

Bull Mortality and Loss of Use insurance available through Betsy Schroeder, Krohmer Agency (605) 539-1871. Must be contacted within 24 hours of the sale.

Homestake Ranch Herd Veterinarian

Huron Veterinary Hospital (605) 352-6063

Homestake Ranch Livestock Nutritionist

Colin Geppert, Hubbard Feeds (605)682-9161

Volume Discounts (bulls only)

2-4 bulls purchased = 3% discount each
5 or more bulls purchased = 5% discount each

Simmental Guide to EPDS

www.simmental.org

BELOW IS A QUICK REFERENCE TO AN EXPLANATION OF EPD'S:

Expected Progeny Differences "EPD's" are the most accurate and effective tool available for comparing genetic levels. In using the EPD differences between two sires EPD's represents the unit difference expected in the performance of their progeny. (Listed below are the units ASA EPD's are expressed in).

(Average EPD's are on the bottom of the percentile table above)

Calving Ease (CE) percentage of unassisted births when used on heifers.

Birth Weight (BW) pounds of birth weight.

Weaning Weight (WW) pounds of weaning weight.

Yearling Weight (YW) pounds of yearling weight.

Maternal Calving Ease (MCE) percentage of unassisted births in first-calving daughters.

Maternal Milk (MM) pounds of weaning weight due to milk.

Maternal Weaning Weight (MWW) pounds of weaning weight due to milk and growth.

Stayability (Stay) percent of daughters remaining in the cowherd at 6 years of age.

Carcass Weight (CW) pounds of carcass weight.

Yield Grade (YG) yield grade score.

Yield grade is an indication of the yield of red meat within a carcass. It is calculated by using several factors including 1) fat thickness, 2)

kidney, pelvic and heart fat. 3) hot carcass weight 4) rib eye area. A (-) EPD is better.

Marbling (MRB) marbling score.

Indexes: The last two columns in the EPD section are fairly new to the Simmental breed, but interesting, they are \$ indexes. Though EPD's allow for the comparison of genetic levels for many economically important traits, they only provide a piece of the economic puzzle. That's where \$ indexes blend EPD's & economics to estimate an animal's overall impact on your bottom line.

All Purpose Index: (API) It is exactly what it says, all purpose. This index includes every trait that can be calculated: calving ease, pounds at weaning and yearling, keeping replacements back, milking ability and stayability, then the calf crop. It took into consideration, some being retained as replacements, then the rest being fed out and sold grade and yield.

Terminal Index (TI): This index is to be used if all calves are going to a feedlot. It evaluates a sire only for use on mature cows with all calves put on feed and sold grade and yield. No other factors were figured in.

Using API and TI: First determine which index to use. If you're breeding heifers and keeping replacements, use API. If all calves are going to the feedlot and finished, use TI.

1 MR BROAD RANGE 513N

RED ANGUS GUIDE TO EPDS RedAngus.org

ProS..... Profitability and Sustainability is an all-purpose index that predicts average economic differences in all segments in the beef supply chain. This index is a combination of the breeding objectives modeled in the HerdBuilder and GridMaster selection indexes. In this index, replacement heifers are retained from within the herd and all remaining progeny are fed out to slaughter and sold on a quality-based grid. Traits included in this index include calving ease, growth, HPG, STAY, Mature Weight, Dry Matter Intake and carcass traits. The resulting index is expressed in dollars per head born (Index/High Value).

HB HerdBuilder is a maternal selection index that predicts the economic differences of animals for traits that are important from conception through weaning. Expressed as dollars per head born, HB is calculated based on the scenario that bulls are mated to heifers and cows, replacement heifers are retained and all remaining progeny are marketed at weaning. Traits included in the HB index include Calving Ease Direct, Calving Ease Maternal, Weaning Weight, Milk, Mature Weight, Heifer Pregnancy and Stayability (Index/High Value).

GM..... GridMaster is a selection index that predicts the average economic difference of non-replacement calves through the post-weaning phase of production. GM places selection pressure on growth, feedyard performance and carcass traits. Expressed as dollars per head born, GM is calculated based on the scenario that progeny are fed out to slaughter and marketed on a quality-based carcass grid. Traits included in GM include Average Daily Gain, Carcass Weight, Dry Matter Intake, Marbling, Back Fat and Rib Eye Area (Index/High Value).

CED Calving Ease Direct predicts differences in the percent of calves born unassisted out of 2-year-old dams. (Percent/High Value)

BW Birth Weight predicts differences in actual birth weight of progeny. (Pounds/Low Value)

WW Weaning Weight predicts differences in 205-day weaning weight. (Pounds/High Value)

YW Yearling Weight predicts differences in 365-day yearling weight. (Pounds/High Value)

ADG Average Daily Gain predicts differences in weight gain between 205 and 365 days of age. (Pounds/High Value)

DMI Dry Matter Intake predicts differences in daily feed intake as measured in a feedlot during the post-weaning period. (Pounds/Low Value)

MILK Milk predicts differences in weaning weight attributed to the milking ability of the animal's daughters. (Pounds/High Value)

ME Maintenance Energy predicts the difference in maintenance energy requirements. (Mcal per Month/Low Value)

HPG Heifer Pregnancy predicts differences in the percent of daughters who are able to conceive and calve at 2 years of age following exposure to breeding. (Percent/High Value)

CEM Calving Ease Maternal predicts differences in the percent of daughters who are able to calve unassisted as 2-year-old heifers. (Percent/High Value)

STAY Stayability predicts differences in the ability of an animals' retained daughters to remain productive in the herd – calve every year – through 6 years of age. (Percent/High Value)

MARB Marbling predicts differences in marbling score – amount of intramuscular fat measured at the 13th rib. (Marbling Score Units/High Value)

YG Yield Grade predicts differences in USDA Yield Grade, which is calculated using CW, REA and Fat. (Yield Grade Units/Low Value)

CW Carcass Weight predicts differences in actual hot carcass weight. (Pounds/High Value)

REA Ribeye Area predicts differences in square inches of ribeye area measured at the 13th rib. (Square Inches/High Value)

FAT Fat predicts differences in the depth of backfat measured between the 12th and 13th ribs. (Inches/Low Value)

There are several ways we could have led off the Red Angus offering in this year's catalog, but these Blue Print sons easily sorted themselves to the top end. 5103 is a dark, cherry red bull that checks all the boxes of a herd bull. He is long sided, strong topped, super correct and walks without a flaw. He has a good set of EPDs to boot!

29 5HSR MR BLUE PRINT 5194

Dollar value indexes, or \$Values, are a tool used to select for several traits at once based on a specific breeding objective. An economic index approach takes into account genetic and economic values as well as the relationships between traits to select for profit.

American Angus Association \$Value Indexes

Maternal Weaned Calf Value (\$M), an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. \$M is built off of a self-replacing herd model where commercial cattlemen replace 25% of their breeding females in the first generation and 20% in subsequent generations. Remaining cull females and all male progeny are sold as feeder calves. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), an index expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. \$W assumes that producers retain 20% of their female progeny for replacements and sell the rest of their cull female and male progeny as feeder calves. Over time, increased selection pressure on \$W will increase weaning and maternal milk traits while also continuing to increase mature cow size.

Feedlot Value (\$F), an index expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value (\$G), an index expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), an index expressed in dollars per carcass, facilitates simultaneous multi-trait genetic selection for feedlot and carcass merit. \$B represents the expected average differences in the progeny post-weaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a quality-based carcass grid.

Combined Value (\$C), an index expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid.

USING CHAROLAIS EPDS FOR SELECTION

- **Birth Weight EPD (BW)** The expected difference in average birth weight (pounds) of progeny. Birth weight reflects prenatal growth.
- **Calving Ease Direct (CE)** is expressed as a difference in percentage of unassisted births in first calf heifers. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire's calves will be born when bred to first-calf heifers.
- **Calving Ease Maternal (MCE)** is expressed as a difference in percentage of unassisted births in first calf daughters. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.
- **Weaning Weight EPD (WW)** The expected difference in average weaning weight of calves. The evaluation reflects the genetic influence on pre-weaning growth rate.
- **Yearling Weight EPD (YW)** The expected difference in average yearling weight of progeny. The evaluation reflects genetic influence on both pre-weaning and post-weaning growth rate.
- **Maternal Milk EPD (Milk)** The genetic ability of a sire's or dam's daughters to express in pounds of weaning weight in her calves due to her maternal ability through mothering instinct and milk.
- **Total Maternal EPD (MTL)** A value to predict the weaning weight performance of calves from a animal's daughters due to genetics for growth and maternal ability. Total Maternal is calculated by adding 1/2 the WW EPD to the Maternal Milk EPD.
- **Scrotal Circumference EPD (SC)** The expected difference in scrotal circumference (expressed in centimeters) of a bull's or dam's male offspring at yearling compared to progeny of all other animals evaluated. Research has also indicated a relationship between increased SC EPD and decreased age at puberty for daughters.
- **Carcass records** are adjusted to an age constant endpoint. Therefore selection based on any or all of the carcass merit EPD are comparable among cattle at the same age endpoint. For example selection based on increased EPD for carcass weight will result in heavier carcass weights than those animals with lower EPD for carcass weights when the cattle are harvested at the same age.
- **Carcass Weight EPD (CW)** Expected progeny differences for Carcass Weight is a predictor of pounds of retail product at a constant age endpoint. Selection for increased values should result in heavier carcasses, while selection for decreased values should result in lighter carcass weights at the same age endpoint. Carcass Weight EPD are expressed in pounds and is a predictor of the differences in hot carcass weight between parents progeny at an age constant endpoint.
- **Ribeye Area EPD (REA)** Ribeye area is measured from a cross-sectional area of the longissimus dorsi muscle at the 12th rib. Ribeye area is a major component of the USDA yield grade equation and selection for increased ribeye area should result in larger ribeyes and lower yield grades between animals with the same carcass weight. Ribeye area has a positive relationship with weight, the larger the animal the larger the ribeye area. Ribeye Area EPD are expressed in square inches and is a predictor of differences in ribeye area between parents progeny at a constant age endpoint.
- **Fat Thickness EPD (FAT)** Fat thickness is measured at the 12th rib and is the primary component to the USDA Yield Grade equation. Fat thickness has a negative relationship to cutability; therefore, selection base on decreased fat thickness should result in lower yield grades and leaner cattle given the same age endpoint. Fat Thickness EPD are expressed in inches and are a predictor of differences in fat thickness between parent's progeny at an age constant endpoint.
- **Marbling Score (MARB)** Marbling is a subjective measure of the amount of intramuscular fat in the ribeye muscle. Marbling score is the primary component of USDA Quality grade and selection for increased Marbling Score EPD should result in cattle with higher quality grades at the same age endpoints. Marbling score has a small genetic correlation with fat, therefore producers may select for increased marbling score EPD while not changing external fat thickness when cattle are harvested at the same age -constant endpoint. Marbling EPD is a prediction of the differences in the USDA subjective marbling score between parent's progeny at an age constant endpoint. Marbling is expressed in the same units as the USDA Marbling Score (see table below), see the accompanying table for USDA Marbling Score in the Carcass Section.
- **Terminal Sire Index (TSI)** The AICA Terminal Sire Index (TSI) is a formal method of combining Expected Progeny Differences (EPD) – BW, WW, YW, REA, CW, MARB and FAT – into one single value on which to base selection decisions. The TSI uses estimates of the genetic relationships between traits with an economic default value based on three year rolling USDA data.
- The TSI represents a dollar index per terminal progeny produced for a bull in the AICA database, ranking them for profit potential. This dollar index is to be interpreted much like single trait EPD. For example, if Sire A's index is \$191.66 and Sire B's index is \$200.00, then we would expect Sire B's offspring to average \$8.34 more net return (\$200.00 minus \$191.66) than Sire A's offspring.

GROUP OF 5 REPLACEMENT QUALITY COMMERCIAL SIMMENTAL HEIFERS

Pen of 5 commercial Simmental heifers. Customers have been asking for this type of lot for many years and we are finally doing it. These heifers are a nice and uniform set of black replacement quality commercial females out of AI sires. If the buyer chooses, we are willing to take these back home with the rest of the heifers and AI them to any bull in the tank for an additional \$50/hd. We will gate cut the group once.
