

Mask research:

Science is about believing things for a reason, not just because someone tells us to. Science doesn't belong to any one person or politician. Science doesn't belong to any institution, government, or entity. Science belongs to humanity.

Public figures, sources & studies that clearly state the reality on what we've known about masks for years:

- Dr Fauci and Attorney General and WHO say [here](#) how masks don't work, and WHO update [here](#) that says "At present, there is no direct evidence (from studies on COVID-19 and in healthy people in the community) on the effectiveness of universal masking of healthy people in the community to prevent infection with respiratory viruses, including COVID-19."
- CDC [here](#) and [here](#)
- NIH study [here](#) that talks about mask only being effective when sick...and not much infection prevention
- New England Journal of Medicine [here](#)
- British Medical Journal (BMJ) [study](#) published in April 2020 cautioned against the use of cloth masks, saying how moisture retention, reuse of cloth masks and poor filtration may result in increased risk of infection.
- Association of American Physicians and Surgeons [here](#)
- US Dept of Labor [here](#)
- Inside Surgery [here](#)
- University of New South Wales study [here](#) on how cloth masks are dangerous to health
- All the clinical studies cited [here](#)
- All the clinical studies cited [here](#)
- All the clinical studies cited [here](#)
- This doctor [here](#) talks about the size of a virus particle vs what size of particles masks filter out.
- Look at all the tags/boxes of any mask you may buy, all the published guidelines clearly say they do not stop the transmission of viruses.

The scientific effectiveness of face masks is not really even controversial. It just has been presented to us differently.
