LEO Launcher & Logistics Schedule Today with Satellite Launch Provider

HOUSTON, TEXAS, USA – LEO Launcher & Logistics is positioned to be the world’s preferred launch provider for frequent, reliable and versatile satellite launches to low earth orbit (LEO). Satellite companies are encouraged to schedule today with LEO Launcher, for monthly air launch flights as early as fourth quarter 2020.

LEO Launcher & Logistics Inc. is a satellite launch provider with headquarters in Houston, Texas USA. LEO Launcher was founded to supply the growing launch capacity of the worldwide market’s low earth orbit satellites.

LEO Launcher air launches customer satellites **to any orbital inclination, 0 to 360 degrees** and offers **frequent launches**, monthly or more frequently to match customers’ requirements. These are special features that are uncommon with most launch providers.

LEO Launcher’s air launch platform performs with **proven, reliable and safe space industry vehicles** that have achieved decades of successful commercial and government satellite orbital launches.

LEO Launcher’s **heavy lift aircraft serves as the platform’s “reusable first stage” vehicle**, air launching the multi-stage rocket from high altitude position over open oceans. LEO Launcher produces **an accurate placement of payloads and satellite constellations to their proper orbit inclination** at low earth orbit altitudes and trajectories.

LEO Launcher offers cost-competitive benefits to satellite owners and operators. LEO Launcher missions are scheduled to match customer requirements; **customers pick the month they wish to deploy their payload**. Capacity allows for payload weight up to 1100 pounds (500 kg) at 1000 mile circular orbits and 2000 mile elliptical orbits.

Call LEO Launcher today to schedule satellites for frequent air launch beginning as early as fourth quarter 2020.
