LEO Launcher Selects Frontier Astronautics' Asp™ Profits to Satellite Customers from Worldwide Launch Provider

HOUSTON, TEXAS, USA, March 31, 2020 – **LEO Launcher & Logistics** announces Asp™ Hydrogen Peroxide Rocket Engine from Frontier Astronautics, LLC, as the robust orbit-stage engine providing a variety of maneuvering applications required by a wide range of worldwide Satellite customers.

“LEO Launcher & Logistics is proud to provide worldwide satellite customers proven and reliable launch equipment in all stages of propulsion,” states *LEO Launcher's* President and Chief Strategy Officer Gail Williamson. “Frontier Astronautics' Asp™ rocket engine is reliable and flexible for the maneuvering applications that satellite customers require, flexible for any inclination, LEO altitude and higher.”

LEO Launcher's air-launch configuration features: 1) horizontal heavy-lift aircraft as “reusable first stage” lift over ocean to 40,000 feet, 2) mid stage Orion rocket motors from Northrop Grumman for propulsion of satellite stage to orbit and 3) final stage Asp™ rocket engine for maneuvering for accurate orbit placement.

Frontier Astronautics' Asp™ engines are robust and use a non-toxic monopropellant, suitable to a variety of maneuvering applications with guaranteed ignition and/or environmentally sensitive propellants. Asp™

engines are proven with over 50 test firings and five flights on an experimental VTVL vehicle requiring high throttling with precision.

LEO Launcher's satellite customers receive superior benefits from air-launching their Satellite constellations, featuring launch frequency to any orbit inclinations, altitudes up to 1,000 miles circular and 2,000 miles elliptical and mass up to 500 kg.

LEO Launcher & Logistics Inc. was established as a low earth orbit satellite Launch Provider since 2015 with headquarters in Houston, Texas.
