

HELP US SAVE PALOMAR MOUNTAIN'S BEAUTY AND ENVIRONMENT

Did you know a proposed 500,000 Volt transmission line threatens to scar the majesty of Palomar Mountain? This massive project could cut a destructive path from Lake Henshaw, following East Grade Road and State Park Road, potentially destroying scenic views and disrupting the tranquility of the State Park.

The proposed route would require clear-cutting of old-growth forests, endanger sensitive species habitats, and potentially disturb culturally significant areas.

Additionally, the high winds prevalent on Palomar Mountain raise concerns about potential damage to the lines and increased fire risk, similar to what caused the devastation of Paradise, California.

Let's work together to protect Palomar Mountain for future generations. Get involved and raise your voice against this unnecessary environmental impact.

How can YOU help?

Take a minute, use the QR code below, or visit SavePalomarMountain.org Please tell why you love Palomar just the way it is and ask the route to be kept off this mountain.
