Go Electric for Efficiency at Home

Upgrading to electric can help keep the air you breathe cleaner, protect the environment, and may lower your electricity bill.

Benefits of an Electric Home

Going electric is more affordable now with the Base Services Charge. Recent bill changes decrease the cost you pay per kilowatt-hour of electricity by about 10%, and available rebates and incentives can help cover upgrades.

Save Over Time

Energy-efficient electric technologies can use less energy to do the same job, which can translate into savings on your electricity bill over time.

Breathe Cleaner Air

By switching your home from gas to clean electricity, you help reduce air pollution inside and greenhouse gas emissions outside.

Explore Rebates & Incentives

You may qualify for upgrades like heat pump HVAC systems, heat pump water heaters, and induction stoves at no cost through select electrification programs.
