

Reinforced Concrete Slabs

RIB & BLOCK

Rib & Block Specification

The Rib and Block system consists of precast concrete ribs that rests between supports (that can be formed by walls, concrete beams, steel beams etc.) Hollow core blocks fit between the ribs as void formers.

When concrete is cast over the system a monolithic concrete slab consisting of a series of Beams is formed.

RCS supplies Rib and Block designed with Ribs at 650mm centers. We manufacture blocks in 3 different heights to accommodate different floor thicknesses.

HB 90 for 170mm floor thickness - HB 140 for 200mm floor thickness - HB 190 for 255mm floor thickness
