

THE RELATIVE GROWTH DIGITAL INFRASTRUCTURE

A Self-Perpetuating Consumption & Growth Modeled Economy

KEY

1. Ownership as a birthright manifested via citizenship and the consumption of goods and services from participating businesses which reward consumer spending with earned equities.
2. Participating legal families and legal guardians open revocable/irrevocable trust accounts so all family member's consumption may be credited to the trust account's earned equities. The heads of households (or 3rd party trustees) state the terms and conditions for all participants in the trust such as how the earned equities will be distributed. There may also be terms and conditions for loss of and/or, suspension of the equities set by the issuers and/or heads of households.
3. The trust accounts may reside and be co-managed by banks and trusts thereby providing ALL families with asset management tools previously reserved for the wealthy while providing banks with new revenue streams.
4. Participating corporations agree that consumer spending is a valid form of investment and a percentage of consumer spending is treated as such thereby generating earned equities to consumers. The percentage amount and terms and conditions for converting the earned equities into restricted digital securities may vary from corporation to corporation.
5. An Alternative Trading System aka "ATS" is a non-exchange trading system that matches buyers and sellers. In this case participating corporations will issue restricted digital securities based upon the earned equities of their consumers and here is where those restricted securities are traded. Corporate buybacks, ETFs, mutual funds, derivatives and other financial instruments may also be listed here.
6. Authorized Traders refers to pre-qualified traders who may represent entities, individuals, hedge funds or others meeting the requirements and trading credentials for qualification. Functions of the system will be under the scrutiny of the SEC/FINRA regulations as legally mandated while offering and/or trading restricted securities.

BENEFITS

1. Ownership as a birthright incentivizes compliance with the existing status quo of an advanced society whereas citizens inherit wealth and growth via consumption which earns citizens equity as the citizen performs within the parameters of the society. Example: A citizen's consumption and wealth growth may be subject to sanctions when they act in violation of the terms and conditions set by heads of households and/or issuers of earned equities . Almost ALL humans consume products and services = all inclusive growth.
2. Consumption and growth family trusts will better incentivize heads of households to better provide steady and positive guidance to family members. If there are potential sanctions within the terms and conditions of earned equities the relative growth theory is that those potential sanctions will better unify families in a common cause to grow their wealth.
3. The trust accounts may reside and be co-managed by banks and trusts thereby providing ALL families with asset management tools previously reserved for the wealthy while providing banks with new revenue streams while potentially creating more jobs such as independent trustees and financial advisors.
4. Participating corporations agree that consumer spending is a valid form of investment and a percentage of consumer spending is treated as such thereby generating perpetual earned equities to consumers. The percentage amount and terms and conditions for converting the earned equities into restricted digital securities may vary from corporation to corporation. A self-perpetuating all inclusive growth system is the goal.
5. An Alternative Trading System aka "ATS" is a non-exchange trading system that matches buyers and sellers. In this case participating corporations will issue restricted digital securities based upon the earned equities of their consumers and here is where those restricted securities are traded. Corporate buybacks, ETFs, mutual funds, derivatives and other financial instruments may also be listed here.
6. Authorized Traders refers to pre-qualified traders who may represent entities, individuals, hedge funds or others meeting the requirements and trading credentials for qualification. Functions of the system will be under the scrutiny of the SEC/FINRA regulations as legally mandated while offering and/or trading restricted securities. As traders trade, profits and fees are shared with the owners of the restricted securities/assets. Therefore; creating a **virtuous cycle** of self-perpetuating and inclusive human wealth growth from digital securities backed by real world tangible assets.
