Tacoma, WA | Made in the USA

Built for the Job Site. Engineered for the Long Haul.

The professional mounting solution for fuel transfer pumps — sturdy, accessible, and built to last.

Product Overview

The Pump Stand is a heavy-duty steel pedestal engineered for permanent fuel transfer installations. Give your customers a product they can count on — a solid, purpose-built platform that mounts any 2" FNPT transfer pump in minutes and anchors permanently to a concrete pad. When service day comes, every fitting and suction line is fully accessible. No buried pipe. No disassembly. No callbacks.

Key Features

- Heavy-duty steel construction — built for permanent, demanding installations
- 2" FNPT fitting — compatible with Fill-Rite, GPI, Piusi, and all major transfer pump brands
- Open-frame design — suction piping stays fully external and accessible at all times
- Concrete anchor base — permanent, stable mounting at ground level
- Powder coat finish — professional appearance, ready to stock and sell
- Remote mounting capable — ideal for above-ground storage tank installations where bung-mount kits won't work
- Made in the USA — designed and fabricated in the Pacific Northwest

The Competitive Advantage

Fill-Rite's FRPA125 is a bung-mount kit — it attaches directly to the tank and cannot be used for remote ground-level mounting. For the most common above-ground tank installation, the FRPA125 is not an option. The Pump Stand is. Priced in the same range, built for the application the FRPA125 cannot serve.

Specifications
