

# CALIFORNIA CITY ANNOUNCES AGREEMENT WITH THE BAKER ENERGY TEAM AND ADVANCE NRG FOR MICROGRID PROJECT

*Under an Energy Service Agreement (ESA,) California City will install at a minimum 3GWs of microgrid solution.*

## **May 25, 2021, CALIFORNIA CITY, CA**

Today, the city of California City announced an agreement with Advance NRG and the Baker Energy Team to engineer and develop multiple locations with resilient and clean energy microgrid power. Meeting the city's goal of sourcing renewable energy options, California City will reap the benefit of clean, renewable energy by 2022.

The capital partner, Instant On, under the Energy Service Agreement (ESA), will arrange the required financing for an initial 3 GWs of power. Instant On will install and sell the output generated power to California City under the city's future Community Choice Aggregate (CCA).

"We are so excited to be part of this great venture in California City and by purchasing the land for the energy solution, we will immediately help the city attain energy independence for many years", said AJ Perkins, President and CEO for Instant On.

The project strategic partners, Nix Energy and S&C Electric, will assist in designing, building, operating, and maintaining the facilities.

"One of the extraordinary things about working in this industry is finding and utilizing solutions that work for all of our customers," said Dusty Baker, Founder and President of the Baker Energy Team. "By eliminating concerns around potential financial barriers with Instant On and leveraging our deep technical expertise with Nix Energy and S&C Electric, we can focus on fostering innovative solutions that fit our clients' needs and benefit the communities they service."

The design and engineering have begun, and initial construction is planned to begin in the fall of 2021.
