

Every minute of every day, adjustments and changes within the body are constantly occurring on a cellular level. All this activity in every organ, gland, system, and cell - down to the smallest particle, is evidence of the Creator's intention for the body to be in balance and to be in a state of health. He created your body to heal itself!

Our bodies were designed to carry us through life well. So, what has happened to us? Our bodies have become overwhelmed!

Our bodies are experiencing toxic overload from many sources today: Medications, environmental toxins through the air we breath, the water we drink, and the foods we eat. A lot of our foods are chemically processed and include ingredients that we don't even recognize. Our foods have become nutrient dense, leaving the body starving on a cellular level.

In our world today, stress levels are running too high. Excess and/or prolonged stress causes the body to stay in a state of fight or flight, resulting in an ongoing overproduction of cortisol and adrenaline, as well as other hormones. When this happens, the stress becomes toxic and can cause dramatic changes in the brain, blood, and cardiovascular system, seriously affecting the entire body.

What are the results of stress toxins? Autoimmune diseases, anxiety, depression, chronic pain conditions, allergies, asthma, compromised immune and endocrine systems, and memory issues. It can also create changes in the DNA that persist through generations.

So, what can be done to support and safeguard the body and brain? If the imbalance on a cellular level can be addressed, you optimize the body's ability to correct the imbalances created by those other factors: environmental, chemical, and stress toxins.

Here is where *Cellular Repair* comes in.

What is *Cellular Repair*?

Cellular Repair is a nutraceutical product that contains a special proprietary blend that has the capability to rebalance systems and to cause the body to return to a state of health. In order to ensure that every person taking this product has the energy on a cellular level to utilize the proprietary blend, a base amount of vitamins and minerals were added to the formula.

What might you expect by taking *Cellular Repair*?

Within days you should experience

- 1) improved, deeper sleep and waking more rested
- 2) increased stamina lasting into the evenings and improved energy
- 3) relief from anxiety and a sense of calmness

It takes the body time to make corrections to whole systems, so be patient. It could take

six to eight weeks to see pain reduction in the body and to experience healing of chronic imbalances.

This highly energetic nutraceutical product contains the following ingredients:

Pyrroloquinoline Quinone (PQQ) - A small molecule that acts as a super powered antioxidant. After being used by the body, it is recycled back into an active form. Then it performs its antioxidant role again. Scientists believe that PQQ can go through several thousand cycles before it is used up and passes as waste out of the body.

PQQ has the ability to

- 1) reduce inflammation
- 2) increase cellular energy
- 3) boost metabolism
- 4) improve memory

CoQ10 - A coenzyme, as well as an antioxidant.

CoQ10 has the ability to

- 1) improve immune system function
- 2) assist circulatory system, improving heart health
- 3) support vessel walls

Inositol - A pseudo vitamin that converts nutrients into energy.

Inositol has the ability to

- 1) combat diabetic nerve pain
- 2) relieve anxiety, panic disorders, and depression
- 3) help achieve better cholesterol and triglyceride levels
- 4) keep fat from collecting in the body, especially in the liver

Choline - An important macronutrient for liver function and nerve function.

Choline has the ability to

- 1) cause nerves to communicate and muscles to move
- 2) support the CNS and brain function
- 3) support energy level and a healthy metabolism
- 4) protect against fatty liver
- 5) combat Alzheimer's disease
- 6) help the body absorb fat to create cell membranes and structures
- 7) help maintain heart health
- 8) help balance chemicals in the body

Choline and Inositol work closely together to make chemical messengers that help to keep the brain and central nervous system working optimally.

Alpha Lipoic Acid - Known as the universal antioxidant.

Alpha Lipoic Acid has the ability to

- 1) reverse damage in aging brain cells
- 2) lower inflammation
- 3) increase energy metabolism and mitochondrial function
- 4) deactivate free radicals, protecting lipoproteins and membranes
- 5) reduce oxidative stress that causes cardiovascular disease
- 6) stabilize blood sugar
- 7) help eye related disorders, such as macular degeneration
- 8) improve vision
- 9) improve nerve conduction, helping with neuropathy
- 10) protects liver

Lutien - A great antioxidant that nourishes the eyes.

Lutien has the ability to

- 1) reduce eye fatigue
- 2) strengthen eye tissue
- 3) protect against macular degeneration
- 4) protect against atherosclerosis
- 5) support brain function, enhancing memory

Zeaxanthin - A powerful antioxidant that nourishes the eyes.

Zeaxanthin has the ability to

- 1) support eye health and improve vision
- 2) protect eyes from light frequencies
- 3) neutralize free radicals that destroy eye cells
- 4) support the cardiovascular system

Lycopene - An antioxidant and phytonutrient.

Lycopene has the ability to

- 1) protect the liver and adrenals
- 2) alleviate nerve pain
- 3) improve heart health
- 4) improve brain health
- 5) relieve oxidative stress in bones, keeping bones strong

Silica - A mineral.

Silica has the ability to

- 1) keep artery walls strong and flexible
- 2) boost the immune system
- 3) facilitate the body's absorption of calcium, strengthening bones
- 4) strengthen skin, teeth, and hair

Boron - An amazing mineral.

Boron has the ability to

- 1) improve bone density, preventing osteoporosis
- 2) reverse arthritis
- 3) balance hormones.
For men, it increases the body's ability to produce and use testosterone.
For women, it can increase estrogen production.
- 4) balance pH levels
- 5) improve brain function
- 6) help combat Candida infections
- 7) help with the metabolism of carbohydrates and the production of insulin from the pancreas

Astaxanthin - Known as the "king of the carotenoids." It is unique in that it spans both layers of the cell membrane, allowing it to trap free radicals both outside and inside the cell.

Astaxanthin has the ability to

- 1) block inflammatory Co42 enzymes, lowering inflammation and reducing pain
- 2) improve eye health, protecting eyes from UV lighting and reducing cataract formation
- 3) improve heart health and cellular health, protecting the cardiovascular system
- 4) improve immune system function
- 5) slow brain aging
- 6) protect muscles and blood vessels

Vanadium - A trace mineral and macronutrient.

Vanadium has the ability to

- 1) increase the body's metabolism of blood sugar
- 2) strengthen bones
