# Welcome

When people my age look back on their lives they remember the times that made the biggest impressions. The birth of children and grandchildren, the death of your parents or a family member, 1980, the whole dam decade of the 80s, the best cow or bull you ever owned, the set of calves that weaned the heaviest or brought the most, the Chiefs' first Super Bowl win in 50 years, and finally 2020.

Indeed it has made an impression on all of us in one way or another. My heart goes out to anyone who has suffered from, or had a loved one they lost to Covid. That said, if I ever hear the word unprecedented again it will be too soon for there is truly nothing new under the sun.

When it's all said and done you will be hard pressed to find a tougher or more resilient group than the American farmer, and more specifically the American beef producer. It seems we can take hit after hit after hit, with little if any help from the government or other outside sources, and somehow keep on going, and producing, and doing our part to feed the world. Whether it's packing house fires, price manipulation by big packers, the push from fake meat and animal rights activists, a pandemic that paralyzes the market, processing, and distribution systems, drought, floods, or anything else that has happened in the last 36 months, somehow we seem to "keep on keeping' on".

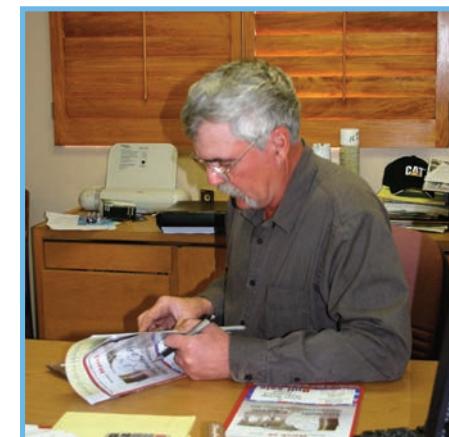

When we go down the list of "essential" workers and businesses, we can't help but mention the health care workers, and law enforcement, and military personnel that have kept so much of this hard and insane time in history more bearable. Yet somewhere near the top of that list should be the men and women that grow, produce, process and distribute the food that sustains not only the sick and the weak, but all of us. I hope that the rest of the world has finally come to realize how important you are. Somehow I doubt they have, but my hat is off to you. You are the foundation of essential.

All that said, welcome to the fall sale at Green Springs. A new twist this fall is a group of really nice Angus females from Garton Angus. Norman, Vicki, George and Crystal have fed bulls in every test here at Green Springs since we started in 1999. That's a lot of years and a lot of bulls. They have finished at the top of the heap more times than not and this group of quality females merits your attention.

Come check out a great set of bulls and females, find the ones that fit your needs and take them home with you. We will do our best to see that you never regret your decision. As we work our way through these difficult times, remember that efficiency, quality, and industry relationships will most likely be the thing that pull us through. If there is anything any of us can do to help, just ask.

Be Safe, Be Kind, and Keep On Keeping' On

Kent, Kathy, Cole, Brady and Travis

# General Information

Announcements made the day of the sale take precedence over the printed catalog.

Sale starts at 1:00 p.m.

**Bidding:** Can be done in person at the auction or via the internet at [www.LiveAuctions.TV](http://www.LiveAuctions.TV) If you are unable to attend the sale and want to purchase bulls, please call Kent at 417-448-7416 to assist you in making your selections. Call prior to the sale to describe the type & breed of bull (bulls) you want and let him know your price range (s). You pay only the bid price, just as if you were bidding in person. Every effort will be made to purchase the bull (bulls) of your choice at your designated price or less. We will call you after the sale to confirm your purchase (s) and confirm your method of payment and plan of trucking or hauling. A hassle free buying experience.

**Breeding Guarantee:** All bulls selling in this sale have passed a thorough and stringent BSE (Breeding Soundness Evaluation) by Dr. Erik Andersen of 54 Vet Clinic, Nevada, Mo. Each bull selling has passed and is considered a satisfactory potential breeder. All bulls are guaranteed as breeding bulls through the first breeding season from the date of purchase. Please keep in mind that we expect the bull (s) to be managed with proper animal husbandry practices. They are young bulls and require some additional management compared to mature bulls. Proper management should include the following: 12-15 month old bulls at time of sale are utilized in a ratio of one bull to no more than 15 cows and 16-20 month old bulls, one bull to no more than 20 cows. Furthermore, if these requirements are not adhered to or these bulls are placed in service or are housed until time of service with mature bulls then consignor of record at time of sale will not stand behind this breeding guarantee. If a problem does arise please contact GSBT, Kent Abele, 417-448-7416, who will in turn notify the owner of record at the time of sale. The problem will be evaluated & consultation with a veterinarian done if needed. If replacement is required, a bull of equal quality will be given. If a replacement bull is not available a credit will be issued to be used in a future GSBT Bull Sale. Shipping an animal you feel is unsatisfactory before contacting GSBT will void the breeding guarantee.

**Bull Development Program/Maintenance After the Sale:** GSBT will work with customers on delivery of bulls in an effort to have the bulls delivered to customers as soon as possible after the sale. However, if you are not ready for the bulls at this time we will maintain & develop the bulls at the ranch for a period of time until you are ready for them. A nominal fee of \$3.50 per day will be charged plus any veterinarian charges incurred will be billed. Bulls will be maintained on a growing ration in grass traps. Bulls become the buyer's responsibility immediately after the sale. GSBT nor the owners there of or the employees there of are not responsible for insurance costs or death or injury. Mortality insurance is available in the sales office & can be purchased at time of settlement as well as first season, breeding insurance. Both are optional at buyers expense.

**Health Certificates:** A health certificate will be provided at the time of settlement which will be sufficient for transporting the bull (s) interstate or intrastate and provides the results of the most recent breeding soundness exam. Buyers who wish to take cattle into states with specific and rigid health regulations should inquire about the health tests required by their state. All bulls sold are virgin bulls and/or have been tested for trichomoniasis. The young bulls, 11-15 months are virgin bulls and have not been exposed to any females. All bulls have been tested for trichomoniasis. It is always sound herd management to test for breeding soundness and trichomoniasis prior to placing bulls with the females at the beginning of breeding season.

**Registration Certificates** will be issued in the owners name. Let the settlement clerks know exactly what name you want to appear on the certificate and what address it should be mailed to. The consignor of the bull holds the responsibility of transferring ownership. Follow up with the consignor that you have purchased the bull from if you have any questions. Consignor names & contact information are listed in the front of the catalog and also with each Lot#.

**Sale Order:** The cattle will sell in numerical catalog order. Bulls sell first and then the females.

**Settlement & Load Out:** All buyers must make settlement in the clerk's office. Cash/check/or credit cards are accepted for payment. If using a credit card a 3% convenience fee will be charged. At the time of settlement, Mortality and/or First Breeding Season Insurance can be purchased. During settlement let the clerks know if you are hauling your bull (s) home the day of sale, or picking them up at the test station in a few days, or leaving them for a short period of time to develop, or need delivery arrangements made. Buyers may load out as soon as settlement is made.

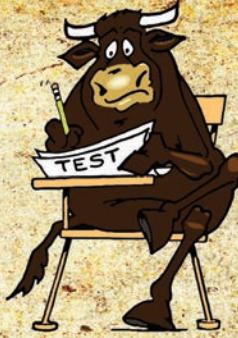

A Covid Friendly Sale-with adequate distance will be provided & hand sanitizer placed strategically for your use.  
Or if you prefer, stay home in the comfort of your office and watch live and make your purchases thru [LiveTV Auctions.com](http://LiveTV Auctions.com)

# Mining the RFI diamond the cow herd

Is residual feed intake (RFI)- a measure of feed efficiency-the missing, ignored, unknown or simply late-to-the-party selection trait in today's cow herd? If it's discussed, it's normally offered as a way of selecting and grouping feedlot cattle. Cow-calf producers often tune it out as white noise.

Even for feedlots, the favorite means of measuring feed efficiency remain feed-to-gain and feed conversion ratios, which work well for pen versus pen but don't drill the process down to an individual basis.

Dr. Susan Markus, beef research scientist at Alberta Agriculture and Forestry, says there is still a large misunderstanding about the subject. "It's often believed feed efficiency or RFI measurement is of most importance to a feedlot. In reality, it's probably more important in the cow herd because we're talking about animals that we basically provide maintenance rations for eight months and gestating or lactating rations for the other four. So if a cow is in our care for 365 days a year, for probably eight to 10 years, RFI is really an indication of the maintenance requirements of that animal, as we typically don't require much gain from the breeding cows."

RFI is calculated by subtracting the expected feed requirements of maintenance and growth

from the actual intake of an individual animal, resulting in a low or negative number in the most efficient animals. Efficient (negative or low RFI) animals use less feed for a high average daily gain. Inefficient (positive or high RFI) animal consume a larger amount to match the same gain.

It is somewhat opposite of traits such as growth and carcass quality, which emphasize inputs to increase income. Factors to lower inputs like feed efficiency have often been overlooked, but it is a fact: Cow herd populations have a wide variation of efficiency between individual animals.

## Feed savings and other benefits

Markus says savings can be realized on an ongoing basis, since feeding the cow herd is long term. "if we look at costs of production - feed, bedding and pasture - those related costs are about 70 percent of our total costs of production in a beef animal."

She says gains continue when conditions are less than favorable. "In an efficient herd, you will also see a benefit when those cows are turned out on resource-limited situations, like swath grazing. Efficient females will actually do better in those situations than their inefficient counterparts."

Other advantages include a decrease in manure and methane production, as emissions are directly proportional to dry matter intake. "We know if a cow eats less, she is going to produce approximately 15 to 20 percent less methane. Feed efficient cows are greener cows with a better carbon footprint."

## Placing RFI-efficient females into the cow herd

Efficient cows are diamonds in the rough, but they aren't easy to extract from the general rubble.

Systems such as GrowSafe, which track water and feed intake through a computerized process and calculate individual consumption and weight gain, are the most accurate way to identify RFI-efficient cattle.

This process is popular with seedstock producers attempting to add a feed-efficiency trait index to their bulls' expected progeny difference (EPD) numbers, but many breed associations are still in the process of establishing EPDs for the trait. For commercial cattlemen with larger numbers of animals,

## Mining the RFI diamonds - cont.

Marcus says some producers test their replacement heifers, counting on the animal to remain in the herd for up to 10 years, but available bunk space is limited and costly with trials taking 45 to 70 days to ensure accurate measurements.

"The good thing is, I don't need to do it that way. It works from the bull angle and genetic selection. I know it's a moderately to highly heritable trait, so if I search out bulls with the other traits I like, plus those having a decent efficiency value, I'm going to breed it into my herd in time."

"We still must test because we need to gather more information, but what we have now is technology using DNA and genomics, so when actual feed testing is done, it's submitted into the database, which contributes to more accurate results."

Markus describes other possibilities for adding RFI efficiency into the cow herd, but they currently lack accuracy. "We can find females with longevity and stayability traits - that might mean they could be more efficient. You can also get a reasonably priced DNA test analyzed and receive an estimated breeding value for a heifer with several traits addressed such as maternal, growth and feed efficiency. It may not be as accurate because it's trying to estimate from a number of snips in her DNA profile, but that's where the technology is today."

Hybrid vigor is also a potential approach, but there is much to be learned in this field. "Some of the research has found animals with more hybrid vigor have improved longevity and stayability, disease susceptibility and improved feed efficiency." She says it's not a quick route, but for the commercial cattlemen, it can still lead down the path to more efficient animals.

### Selecting for more than a single trait

Markus urges producers to select for a fleet of traits and not just a single one like RFI. "I'm not going to select a feed-efficient female with poor maternal traits. You have to put this in a package for trait selection because we don't want to lose those economically important to our business." Structural conformation, growth performance, fertility, longevity, docility and carcass quality top a long list of traits similarly vital to the animal and operation.

She sees RFI as a measure of feed efficiency becoming more critical to all variations of livestock production, with the use of DNA, genomic testing and systems like GrowSafe continuing to add measurements to the databases. "As we get more breeds creating RFI EPDs, the commercial cattlemen will have more options to find feed-efficient animals in any breed they choose. But it all takes time and numbers to get accurate data."

# Garton Angus Ranch

Offers you a quality set of females

Take a look at the cows pedigrees. the Garton's have been breeding Angus for decades and always have high volume, high quality cattle. The cows are soggy and already performed for the Garton's or they wouldn't have stayed in the herd.

Take a look and buy with confidence .

Call Norman 417-667-5696 Home or 417-684-5477 Cell

# Welcome

Norman, Vicki, George, Crystal, John, and granddaughters Irene and Edith Garton are proud to welcome you to our Angus female sale at Green Springs Tested Bull Sale. We started Garton Angus in 1971 as a small family operation and in 1973 started using artificial insemination and keeping records with AHIR. We collect our top-producing cows for embryo transfer and have done so since 1981. Cows in this sale have been bred for fertility and maternal qualities. Since 1999, we have sent bulls to Green Springs Bull Test, Nevada, Mo. and have had high-indexing and high-selling bulls. For several years George and Crystal have sold the highest-selling bulls at Green Springs to producers in Nebraska, Montana, and Oklahoma.

While improving our bull selection using performance data, we have also collected detailed carcass information through 20 years of sending home-raised steers to MO Steer Feed Out through the University of MO Extension. Our steers have been top in profitability and daily gain, and have received Premiums for carcasses that were either Prime, Certified Angus Beef, or Yield Grade 2's. Norman is a past director on Missouri, American, and Certified Angus Beef Boards. A family operation, Garton Angus is happy to offer cattle with growth and top quality carcass traits that will work well for both commercial and registered cattle producers.

## The Garton Family

**Lots 100-110 A    11 Cows with Spring Born Calves**

**Lots 111-112    2 Cows Bred to calve in Jan & Feb**

**Lots 114-124A    11 Cows with Fall Born Calves**
