Welcome

&

Other Rants

It looks like we are going to survive! I always thought that we would, but there were moments when I began to question our resolve.

The obvious eight hundred pound gorilla in the room was the pandemic. Even though we aren't through it, we can now definitely see the light at the end of the tunnel.

The weather in mid February also made us remember that indeed it can still get cold here in our part of the world. Where was global warming when we really needed it?

Politics still reign supreme even though some people thought it would all get better after the election. It just doesn't seem that everyone can just hug and come together, it seems to never be that easy, even though it should be. I think it was Mark Twain that once said, "Politicians and diapers should be changed often, and for the same reason."

However we are still dealing with the fake meat battle. It's just not going to go away anytime soon. Especially when people like Bill Gates, that don't know crap from corn meal about anything but computer software and monopolies, try to convince everyone that cattle are destroying the environment and that, "wealthy countries should all eat synthetic beef." (synthetic and beef, two words that should never even be used together) After which he flies away in his private jet that spews more GHGs than a medium sized feedlot and that, unlike him actually feeds someone and adds purpose and value to society. The good news is that now that this country's national debt is approaching 30 trillion dollars, we can hardly be classified as "wealthy". Why is it that just because people have fame and/or fortune, others think they are the go to source for all answers. This will likely not change until a lot of people go hungry or undernourished. Let's just make sure we start with the Bill Gates' of the world.

Now that we have all that out of the way, we would like to welcome you to the Spring of 2021 Green Springs Beef Development Center bull sale.

As always we have a nice set of bulls that were selected out of about 120 head of bulls in their test groups that offer a nice balance of performance, phenotype, and genotype to help you move forward in the beef business. All the bulls have had a complete BSE, and been Trich tested and sell with our guarantee. Buy with confidence.

If there is anything we can do to help with your selections, help you understand the data, or help you with marketing calves, just give us a call. We know the systems and data we provide work, otherwise we wouldn't have so many good cattlemen that have continued to buy bulls here over the last twenty years.

We think the bulls in the sale will help advance your herds, the industry and if you buy one with a negative RFI, even help save the planet. After all, everyone knows that efficient cattle produce less methane than inefficient ones. Gosh, I guess there are even bulls here that Bill Gates could love, even though he'd never admit it.

Hope to see you sale day, *Kent, Kathy, Cole, Brady, & Travis*

Top 5 good things about bad cows

1. Order buyers can't possibly add up all the discounts in the 30 seconds your calves are in the ring.
2. Every-other-year calvers reduce forage demands and bull requirements.
3. Poor disposition, yeah, but rustlers and coyote problems are rare.
4. Big forage savings since they're in the neighbor's pasture half the time.
5. Some call it inefficient reproduction, you call it year-round cash flow.

Top 5 Country Road Traffic Rules

1. Count on tow mirrors to have a limited life expectancy.
2. Since trailer light function is erratic at best, get ready for the 2 cowboys ahead of you to whip in to the first rehydration station they come to.
3. If possible, avoid freshly graded roads until someone else has picked up all the resurfaced nails.
4. If the road is blocked by a couple of old-timers having a side-by-side chat, just honk at them-unless one of them is a landlord.
5. Whether the deer has the right-of-way depends on which truck you are driving & how big his rack is.

 the price.

A Little Bit of This & That

We must fight to keep the right

If someone had told me just a few years ago that the time may come when dope is legal and cows are outlawed, I'd have called them crazy. The fact is that we are not all that far from that totally absurd and ignorant position.

Many states have now legalized medicinal pot, including our home state of Missouri. Several states now have legalized recreational marijuana. One state in the Northwest part of our country has now legalized small (personal) amounts of cocaine and heroin.

The push is on in many parts of the country to do away with beef cattle and even animal agriculture in general. The governor of the state of Colorado (if you could call him that) recently declared March 20th as meat out day. His premise is that animal agriculture is being shunned by an increasing number of people as environmentally destructive and totally inhumane. Thus we should do all we can to reduce or eliminate animal agriculture in its entirety. This is the head of government of a state that is a leading agricultural and beef producing entity and, yes, one of the first states to legalize recreational marijuana.

Yet as a general rule our industry and the animal agriculture industry as a whole has remained largely silent. The real question is why? Is it because it's in our nature to not cause a scene? Is it because we don't think this is a serious threat? Is it because we don't have time to deal with it? Is it because we trust our industry organizational leaders to deal with it? Or is it because we just don't know how to react?

The answer to these is both yes and no. I think we are starting to now realize the seriousness of the situation but it is in our nature to not rock the boat and most of us don't have time to deal with it. To trust our industry leaders to deal with it (especially alone) would be a huge mistake. Not knowing how to react or not having the information necessary to do so is no one's fault but our own.

We must all attack this travesty with fervor and the one thing that can dispel the concept in its entirety: the truth.

It is a fact that cattle produce methane. It is a fact that methane is one of the most harmful of what are called the green house gasses. But what is also a fact is that methane has a half life of ten years. What this means is that the methane currently in the atmosphere because of cattle is less than it was just a couple of decades ago. This is true because fewer cattle produce less methane and we have significantly fewer cows (about 30% fewer) than we just 25 or 30 years ago. The fact that methane breaks down in 10 years means that the gas that more cattle produced back then is being replaced by less methane that is being produced now by a smaller herd.

We must fight to keep the right , cont.

v

Carbon dioxide on the other hand has a half life of 1000 years. Fossil fuels take carbon from the ground that has been sequestered there for millions of years, and after going through vehicles, planes, trains, electrical generators and many of the other things fossil fuels are used for and puts them in our atmosphere and it remains there for 1000 years before it is broken down. Every year we have more vehicles, and use more fuel and those emissions are added to the ones from last year and the year before and so on until we have the problem that we are seeing now.

Facts bear out that cattle in the US contribute only 2% of our green house gas emissions. By the way electricity generation accounts for 28% and transportation accounts for 29% of US emissions. Another interesting fact is that beef production in this country is so much more efficient than the rest of the world that we produce 18% of the world's beef with only 6% of the world's cattle. Our industries contribution to world GHG production is only .5%. So if every American stopped eating beef and started eating substitutes there would be virtually no measureable impact on climate change.

Facts also bear out that beef is raised on land, most of which has very limited value for other production enterprises. Most of the country is not suitable for crop or vegetable production but it will produce high quality protein from ruminants that can upgrade that forage into a much higher quality more nutritious product.

It is also a fact that most of this land if managed and grazed properly, can act to sequester carbon from so many other sources that have much more environmental impact than cattle. So indeed cattle are not a major contributor but also have the ability to help solve the problem.

If we acknowledge the truth, it becomes obvious that meat substitutes are not only less appealing and less nutritious, but they are no more environmentally friendly and much more highly processed than good old US grown beef.

Do not misunderstand my position. I am not against any form of enterprise that strives to supply a source of safe nutritious protein to the public. It is not the American way to stand in the way of free enterprise as long as the product is safe, treated on a level playing field, monitored, and inspected in the same way that all food products are treated. It is however wrong for any industry to maliciously and erroneously attack another in an effort to discredit one product in favor of another. Let them label their product for what it is, fake. Let them represent it for what it is, a highly processed substitute. Let them name it for what it is, not a burger, not meat. Meat, just like milk, comes from animals, not processed from plants, not grown in a laboratory. Their product is no more meat than ours' is a vegetable.

We must fight to keep the right , cont.

We must as producers, take these facts and other facts as they become available to educate the public. Not one another but people that don't know our industry. Not other producers because they know the truth, but rather people that don't.

We can no longer be passive. We can no longer just lay on the ropes, endure the punches and take the beatings. Armed with the truth and the facts, we must come out swinging. Defense is great, and if you are on a level playing field, it can serve to help win the game. But if the other team is not playing by the rules, you must produce some offense. As cattle producers we must begin to move the needle back toward the truth, back to common sense, back to acknowledge the fact that when we strive to negate climate change, the first thing we attack should not be our food sources.

We can and will all contribute to the effort of making our industry more sustainable, more efficient and more environmentally friendly. We have made huge strides in the past and continue to do so. However we must make those efforts and achievements all the more visible. Unfortunately, as silly as it sounds, the time has come when we must now "fight to keep the right" to continue to feed the world.

Lot 16

General Information

Announcements made the day of the sale take precedence over the printed catalog. Sale starts at 1:00 p.m. The bulls will sell in numerical catalog order.

Bidding: Can be done in person at the auction or via the internet at www.LiveAuctions.TV If you are unable to attend the sale and want to purchase bulls, please call Kent at 417-448-7416 to assist you in making your selections. Call prior to the sale to describe the type & breed of bull (bulls) you want and let him know your price range (s). You pay only the bid price, just as if you were bidding in person. Every effort will be made to purchase the bull (bulls) of your choice at your designated price or less. We will call you after the sale to confirm your purchase (s) and confirm your method of payment and plan of trucking or hauling. A hassle free buying experience.

Breeding Guarantee: All bulls selling in this sale have passed a thorough and stringent BSE (Breeding Soundness Evaluation) by Dr. Erik Andersen of 54 Vet Clinic, Nevada, Mo. Each bull selling has passed and is considered a satisfactory potential breeder. All bulls are guaranteed as breeding bulls through the first breeding season from the date of purchase. Please keep in mind that we expect the bull (s) to be managed with proper animal husbandry practices. They are young bulls and require some additional management compared to mature bulls. Proper management should include the following: 12-15 month old bulls at time of sale are utilized in a ratio of one bull to no more than 15 cows and 16-20 month old bulls, one bull to no more than 20 cows. Furthermore, if these requirements are not adhered to or these bulls are placed in service or are housed until time of service with mature bulls then consignor of record at time of sale will not stand behind this breeding guarantee. If a problem does arise please contact GSBT, Kent Abele, 417-448-7416, who will in turn notify the owner of record at the time of sale. The problem will be evaluated & consultation with a veterinarian done if needed. If replacement is required, a bull of equal quality will be given. If a replacement bull is not available a credit will be issued to be used in a future GSBT Bull Sale. Shipping an animal you feel is unsatisfactory before contacting GSBT will void the breeding guarantee.

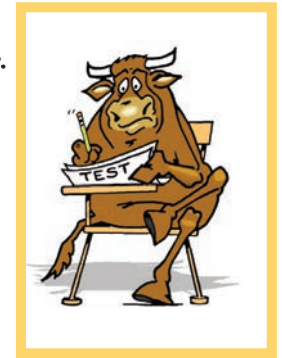

Bull Development Program/Maintenance After the Sale: GSBT will work with customers on delivery of bulls in an effort to have the bulls delivered to customers as soon as possible after the sale. However, if you are not ready for the bulls at this time we will maintain & develop the bulls at the ranch for a period of time until you are ready for them. A nominal fee of \$3.50 per day will be charged plus any veterinarian charges incurred will be billed. Bulls will be maintained on a growing ration in grass traps. Bulls become the buyer's responsibility immediately after the sale. GSBT nor the owners there of or the employees there of are not responsible for insurance costs or death or injury. Mortality insurance is available in the sales office & can be purchased at time of settlement as well as first season, breeding insurance. Both are optional at buyers expense.

Health Certificates: A health certificate will be provided at the time of settlement which will be sufficient for transporting the bull (s) interstate or intrastate and provides the results of the most recent breeding soundness exam. Buyers who wish to take cattle into states with specific and rigid health regulations should inquire about the health tests required by their state. All bulls sold are virgin bulls and/or have been tested for trichomonosis. The young bulls, 11-15 months are virgin bulls and have not been exposed to any females. All bulls have been tested for trichomonosis. It is always sound herd management to test for breeding soundness and trichomonios prior to placing bulls with the females at the beginning of breeding season.

Registration Certificates will be issued in the owners name. Let the settlement clerks know exactly what name you want to appear on the certificate and what address it should be mailed to. The consignor of the bull holds the responsibility of transferring ownership. Follow up with the consignor that you have purchased the bull from if you have any questions. Consignor names & contact information are listed in the front of the catalog and also with each Lot#.

Missing Test Data: Indicated in each bull's Lot information with an ss, Scrotal CM, Pelvic Measurement, Frame Score ...will be provided sale day in the Sale Supplement (ss) handout BSE exams were not done prior to catalog going to print.

Settlement & Load Out: All buyers must make settlement in the clerk's office. Cash/check/or credit cards are accepted for payment. If using a credit card a 3% convenience fee will be charged. At the time of settlement, Mortality and/or First Breeding Season Insurance can be purchased. During settlement let the clerks know if you are hauling your bull (s) home the day of sale, or picking them up at the test station in a few days, or leaving them for a short period of time to develop, or need delivery arrangements made. Buyers may load out as soon as settlement is made.
