

Tree Bird Suet Core Comparison Test vs Premium Store Bought Suet

Following is a time lapse of suet cores inserted in the Tree Bird Feeder at 9 AM on a Sunday morning. Bottom core is a Tree Bird Super Suet Core and the bottom core is one made from **premium** store bought suet. Photos on the left are from the north side of the feeder and the photos on the right are from the south side of the feeder. This is the same feeder we did the test against the regular store bought suet. This time we did switch the suet tubes just to change things up from the previous test.

9:00 AM

3:00 PM

Both tubes are filled to the end of the tube on both sides.

The upper tube with the premium store bought suet has not been touched. The Tree Bird Suet on the bottom has been eaten to approximately an inch and a half on both sides.

10:30 AM (Next Day)

As you can see the Tree Bird Suet at the bottom tube has been completely eaten. The premium store bought suet has hardly even been touched. If you want to attract birds, you need to use quality feed and Tree Bird Brand is the best you can get!
