真空滚揉机

Vacuum kneading machine

真空滚揉机采用圆筒内导板自挤压原理进行滚揉，当筒体转动时肉块按导板导向往里挤压，肉块经自我摔打、相互挤压，使肉体蛋白质分解成水溶性蛋白，易被人体吸收。同时能使添加料（淀粉等）与肉体蛋白质互为溶合，以达到肉质变嫩、口感好、成品率高的目的。

The vacuum rolling machine adopts the principle of self extrusion of the inner guide plate of the cylinder for rolling. When the cylinder rotates, the meat pieces are guided by the guide plate and squeezed inward. The meat pieces are self beaten and mutually squeezed, causing the protein in the body to decompose into water-soluble protein, which is easily absorbed by the human body. At the same time, it can make the additives (starch, etc.) dissolve with the body protein, achieving the goal of tender meat, good taste, and high yield of finished products.
