MATHS -9 (CH-13- SURFACE AREAS & VOLUMES)

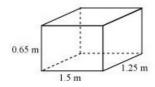

MATHS -9 (CH-13-13.1- SURFACE AREAS & VOLUMES)

Question 1:

A plastic box 1.5 m long, 1.25 m wide and 65 cm deep, is to be made. It is to be open at the top. Ignoring the thickness of the plastic sheet, determine:

- (i) The area of the sheet required for making the box.
- (ii) The cost of sheet for it, if a sheet measuring 1 m² costs Rs 20.

Answer 1:

It is given that, length (/) of box = 1.5 m

Breadth (b) of box = 1.25 m

Depth (h) of box = 0.65 m

(i) Box is to be open at top.

Area of sheet required

= 2lh + 2bh + lb

 $= [2 \times 1.5 \times 0.65 + 2 \times 1.25 \times 0.65 + 1.5 \times 1.25] \text{ m}^2$

 $= (1.95 + 1.625 + 1.875) \text{ m}^2 = 5.45 \text{ m}^2$

(ii) Cost of sheet per m² area = Rs 20

Cost of sheet of 5.45 m² area = Rs (5.45×20)

= Rs 109

Question 2:

The length, breadth and height of a room are 5 m, 4 m and 3 m respectively. Find the cost of white washing the walls of the room and the ceiling at the rate of Rs 7.50 per m^2 .

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 2:

It is given that

Length (/) of room = 5 m

Breadth (b) of room = 4 m

Height (h) of room = 3 m

It can be observed that four walls and the ceiling of the room are to be white-washed. The floor of the room is not to be white-washed.

Area to be white-washed = Area of walls + Area of ceiling of room

= 2lh + 2bh + lb

 $= [2 \times 5 \times 3 + 2 \times 4 \times 3 + 5 \times 4] \text{ m}^2$

 $= (30 + 24 + 20) \text{ m}^2$

 $= 74 \text{ m}^2$

Cost of white-washing per m² area = Rs 7.50

Cost of white-washing 74 m² area = Rs (74×7.50)

= Rs 555

Question 3:

The floor of a rectangular hall has a perimeter 250 m. If the cost of panting the four walls at the rate of Rs.10 per m^2 is Rs.15000, find the height of the hall.

[Hint: Area of the four walls = Lateral surface area.]

Answer 3:

Let length, breadth, and height of the rectangular hall be /m, b m, and h m respectively.

Area of four walls = 2lh + 2bh

= 2(I + b) h

Perimeter of the floor of hall = 2(I + b)

 $= 250 \, \text{m}$

 \therefore Area of four walls = $2(l + b) h = 250 h m^2$

Cost of painting per m² area = Rs 10

Cost of painting $250h \,\mathrm{m}^2$ area = Rs $(250h \times 10)$ = Rs 2500h

However, it is given that the cost of paining the walls is Rs 15000.

: 15000 = 2500h

h = 6

Therefore, the height of the hall is 6 m.

Ouestion 4:

The paint in a certain container is sufficient to paint an area equal to $9.375 \, \text{m}^2$. How many bricks of dimensions $22.5 \, \text{cm} \times 10 \, \text{cm} \times 7.5 \, \text{cm}$ can be painted out of this container?

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 4:

Total surface area of one brick = 2(lb + bh + lh)

 $= [2(22.5 \times 10 + 10 \times 7.5 + 22.5 \times 7.5)] \text{ cm}^2$

 $= 2(225 + 75 + 168.75) \text{ cm}^2$

 $= (2 \times 468.75) \text{ cm}^2$

 $= 937.5 \text{ cm}^2$

Let *n* bricks can be painted out by the paint of the container.

Area of *n* bricks = $(n \times 937.5)$ cm² = 937.5n cm²

Area that can be painted by the paint of the container = $9.375 \text{ m}^2 = 93750 \text{ cm}^2$

... 93750 = 937.5n

n = 100

Therefore, 100 bricks can be painted out by the paint of the container.

Question 5:

A cubical box has each edge 10 cm and another cuboidal box is 12.5 cm long, 10 cm wide and 8 cm high.

- (i) Which box has the greater lateral surface area and by how much?
- (ii) Which box has the smaller total surface area and by how much?

Answer 5:

(i) Edge of cube = 10 cm

Length (\hbar) of box = 12.5 cm

Breadth (b) of box = 10 cm

Height (h) of box = 8 cm

Lateral surface area of cubical box = $4(edge)^2$

 $= 4(10 \text{ cm})^2$

 $= 400 \text{ cm}^2$

Lateral surface area of cuboidal box = 2[lh + bh]

 $= [2(12.5 \times 8 + 10 \times 8)] \text{ cm}^2$

 $= (2 \times 180) \text{ cm}^2$

 $= 360 \text{ cm}^2$

Clearly, the lateral surface area of the cubical box is greater than the lateral surface area of the cuboidal box.

Lateral surface area of cubical box – Lateral surface area of cuboidal box = 400 cm^2 – 360 cm^2 = 40 cm^2

Therefore, the lateral surface area of the cubical box is greater than the lateral surface area of the cuboidal box by 40 cm².

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

(ii) Total surface area of cubical box = $6(edge)^2 = 6(10 cm)^2 = 600 cm^2$

Total surface area of cuboidal box

= 2[lh + bh + lb]

 $= [2(12.5 \times 8 + 10 \times 8 + 12.5 \times 10)] \text{ cm}^2$

 $= 610 \text{ cm}^2$

Clearly, the total surface area of the cubical box is smaller than that of the cuboidal box.

Total surface area of cuboidal box – Total surface area of cubical box = 610 cm^2 – 600 cm^2 = 10 cm^2

Therefore, the total surface area of the cubical box is smaller than that of the cuboidal box by 10 cm².

Question 6:

A small indoor greenhouse (herbarium) is made entirely of glass panes (including base) held together with tape. It is 30 cm long, 25 cm wide and 25 cm high.

- (i) What is the area of the glass?
- (ii) How much of tape is needed for all the 12 edges?

Answer 6:

(i) Length (/) of green house = 30 cm

Breadth (b) of green house = 25 cm

Height (h) of green house = 25 cm

Total surface area of green house

= 2[lb + lh + bh]

 $= [2(30 \times 25 + 30 \times 25 + 25 \times 25)] \text{ cm}^2$

 $= [2(750 + 750 + 625)] \text{ cm}^2$

 $= (2 \times 2125) \text{ cm}^2$

 $= 4250 \text{ cm}^2$

Therefore, the area of glass is 4250 cm².

It can be observed that tape is required along side AB, BC, CD, DA, EF, FG, GH, HE, AH, BE, DG, and CF.

Total length of tape = 4(l + b + h)

= [4(30 + 25 + 25)]cm

= 320 cm

Therefore, 320 cm tape is required for all the 12 edges.

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 7:

Shanti Sweets Stall was placing an order for making cardboard boxes for packing their sweets. Two sizes of boxes were required. The bigger of dimensions 25 cm \times 20 cm \times 5 cm and the smaller of dimensions 15 cm \times 12 cm \times 5 cm. For all the overlaps, 5% of the total surface area is required extra. If the cost of the cardboard is Rs 4 for 1000 cm², find the cost of cardboard required for supplying 250 boxes of each kind.

Answer 7:

Length (I_1) of bigger box = 25 cm

Breadth (b_1) of bigger box = 20 cm

Height (h_1) of bigger box = 5 cm

Total surface area of bigger box = 2(lb + lh + bh)

 $= [2(25 \times 20 + 25 \times 5 + 20 \times 5)] \text{ cm}^2$

 $= [2(500 + 125 + 100)] \text{ cm}^2$

 $= 1450 \text{ cm}^2$

Extra area required for overlapping = $\left(\frac{1450 \times 5}{100}\right)$ cm²

 $= 72.5 \text{ cm}^2$

While considering all overlaps, total surface area of 1 bigger box

 $= (1450 + 72.5) \text{ cm}^2 = 1522.5 \text{ cm}^2$

Area of cardboard sheet required for 250 such bigger boxes

 $= (1522.5 \times 250) \text{ cm}^2 = 380625 \text{ cm}^2$

Similarly, total surface area of smaller box = $[2(15 \times 12 + 15 \times 5 + 12 \times 5)]$ cm²

 $= [2(180 + 75 + 60)] \text{ cm}^2$

 $= (2 \times 315) \text{ cm}^2$

 $= 630 \text{ cm}^2$

Therefore, extra area required for overlapping = $\left(\frac{630 \times 5}{100}\right)$ cm² = 31.5 cm²

Total surface area of 1 smaller box while considering all overlaps

 $= (630 + 31.5) \text{ cm}^2 = 661.5 \text{ cm}^2$

Area of cardboard sheet required for 250 smaller boxes = (250×661.5) cm²

 $= 165375 \text{ cm}^2$

Total cardboard sheet required = (380625 + 165375) cm²

= 546000 cm²

Cost of 1000 cm2 cardboard sheet = Rs 4

Cost of 546000 cm² cardboard sheet = Rs $\left(\frac{546000 \times 4}{1000}\right)$ = Rs 2184

Therefore, the cost of cardboard sheet required for 250 such boxes of each kind will be Rs 2184.

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 8:

Parveen wanted to make a temporary shelter for her car, by making a box-like structure with tarpaulin that covers all the four sides and the top of the car (with the front face as a flap which can be rolled up). Assuming that the stitching margins are very small, and therefore negligible, how much tarpaulin would be required to make the shelter of height $2.5 \, \text{m}$, with base dimensions $4 \, \text{m} \times 3 \, \text{m}$?

Answer 8:

Length (1) of shelter = 4 m

Breadth (b) of shelter = 3 m

Height (h) of shelter = 2.5 m

Tarpaulin will be required for the top and four wall sides of the shelter.

Area of Tarpaulin required = 2(lh + bh) + lb

 $= [2(4 \times 2.5 + 3 \times 2.5) + 4 \times 3] \text{ m}^2$

 $= [2(10 + 7.5) + 12] m^2$

 $= 47 \text{ m}^2$

Therefore, 47 m² tarpaulin will be required.

MATHS -9 (CH-13-13.2- SURFACE AREAS & VOLUMES)

Question 1:

The curved surface area of a right circular cylinder of height 14 cm is 88 cm². Find the diameter of the base of the cylinder. Assume $\pi = \frac{22}{7}$

Answer 1:

Height (h) of cylinder = 14 cm

Let the diameter of the cylinder be d.

Curved surface area of cylinder = 88 cm²

 $\Rightarrow 2\pi rh = 88 \text{ cm}^2$ (r is the radius of the base of the cylinder)

 $\Rightarrow \pi dh = 88 \text{ cm}^2 (d = 2r)$

 $\Rightarrow \frac{22}{7} \times d \times 14 \text{ cm} = 88 \text{ cm}^2$

 $\Rightarrow d = 2 \text{ cm}$

Therefore, the diameter of the base of the cylinder is 2 cm.

Question 2:

It is required to make a closed cylindrical tank of height 1 m and base diameter 140 cm from a metal sheet. How many square meters of the sheet are required for the same? $\left[Assume\ \pi = \frac{22}{7}\right]$

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 2:

Height (h) of cylindrical tank = 1 m

Base radius (r) of cylindrical tank = $\left(\frac{140}{2}\right)$ cm = 70 cm = 0.7 m

Area of sheet required = Total surface area of tank = $2\pi r(r+h)$

$$= \left[2 \times \frac{22}{7} \times 0.7(0.7+1)\right] \text{ m}^2$$
$$= (4.4 \times 1.7) \text{ m}^2$$
$$= 7.48 \text{ m}^2$$

Therefore, it will require 7.48 m² area of sheet.

Question 3:

A metal pipe is 77 cm long. The inner diameter of a cross section is 4 cm, the outer diameter being 4.4 cm.

- (i) Inner curved surface area,
- (ii) Outer curved surface area,
- (iii) Total surface area. $\left[Assume \ \pi = \frac{22}{7} \right]$

Answer 3:

Inner radius (r_i) of cylindrical pipe $=\left(\frac{4}{2}\right)$ cm = 2 cm

Outer radius (r_2) of cylindrical pipe = $\left(\frac{4.4}{2}\right)$ cm = 2.2 cm

Height (h) of cylindrical pipe = Length of cylindrical pipe = 77 cm

(i) CSA of inner surface of pipe = $2\pi r_i h$

$$= \left(2 \times \frac{22}{7} \times 2 \times 77\right) \text{ cm}^2$$

 $= 968 \text{ cm}^2$

(ii) CSA of outer surface of pipe = $2\pi r_2 h$

$$= \left(2 \times \frac{22}{7} \times 2.2 \times 77\right) \text{ cm}^2$$

$$=(22\times22\times2.2) \text{ cm}^2$$

 $=1064.8 \text{ cm}^2$

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

(iii) Total surface area of pipe = CSA of inner surface + CSA of outer surface + Area of both circular ends of pipe

$$= 2\pi r_1 h + 2\pi r_2 h + 2\pi \left(r_2^2 - r_1^2\right)$$

$$= \left[968 + 1064.8 + 2\pi \left\{ \left(2.2\right)^2 - \left(2\right)^2 \right\} \right] \text{ cm}^2$$

$$= \left(2032.8 + 2 \times \frac{22}{7} \times 0.84\right) \text{ cm}^2$$

$$= \left(2032.8 + 5.28\right) \text{ cm}^2$$

$$= 2038.08 \text{ cm}^2$$

Therefore, the total surface area of the cylindrical pipe is 2038.08 cm².

Question 4:

The diameter of a roller is 84 cm and its length is 120 cm. It takes 500 complete revolutions to move once over to level a playground. Find the area of the playground in m^2 ? Assume $\pi = \frac{22}{7}$

Answer 4:

It can be observed that a roller is cylindrical.

Height (h) of cylindrical roller = Length of roller = 120 cm

Radius (r) of the circular end of roller = $\left(\frac{84}{2}\right)$ cm = 42 cm

CSA of roller = $2\pi rh$

$$= \left(2 \times \frac{22}{7} \times 42 \times 120\right) \text{ cm}^2$$

 $=31680 \text{ cm}^2$

Area of field = 500 × CSA of roller

- $= (500 \times 31680) \text{ cm}^2$
- = 15840000 cm²
- $= 1584 \text{ m}^2$

Question 5:

A cylindrical pillar is 50 cm in diameter and 3.5 m in height. Find the cost of painting the curved surface of the pillar at the rate of Rs.12.50 per m². $\left[\text{Assume } \pi = \frac{22}{7}\right]$

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 5:

Height (h) cylindrical pillar = 3.5 m

Radius (*r*) of the circular end of pillar = $\frac{50}{2}$ = 25 cm

 $= 0.25 \, \text{m}$

CSA of pillar = $2\pi rh$

$$= \left(2 \times \frac{22}{7} \times 0.25 \times 3.5\right) \text{m}^2$$

 $=(44\times0.125) \text{ m}^2$

 $= 5.5 \text{ m}^2$

Cost of painting 1 m² area = Rs 12.50

Cost of painting 5.5 m² area = Rs (5.5×12.50)

= Rs 68.75

Therefore, the cost of painting the CSA of the pillar is Rs 68.75.

Question 6:

Curved surface area of a right circular cylinder is 4.4 m². If the radius of the base of the cylinder is 0.7 m, find its height. Assume $\pi = \frac{22}{7}$

Answer 6:

Let the height of the circular cylinder be h.

Radius (r) of the base of cylinder = 0.7 m

CSA of cylinder = 4.4 m²

 $2\pi rh = 4.4 \text{ m}^2$

$$\left(2 \times \frac{22}{7} \times 0.7 \times h\right) \,\mathrm{m} = 4.4 \,\mathrm{m}^2$$

h = 1 m

Therefore, the height of the cylinder is 1 m.

Question 7:

The inner diameter of a circular well is 3.5 m. It is 10 m deep. Find

- (i) Its inner curved surface area,
- (ii) The cost of plastering this curved surface at the rate of Rs 40 per m². $\left[\text{Assume } \pi = \frac{22}{7} \right]$

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 7:

Inner radius (r) of circular well = $\left(\frac{3.5}{2}\right)$ m = 1.75 m

Depth (h) of circular well = 10 m

Inner curved surface area = $2\pi rh$

$$= \left(2 \times \frac{22}{7} \times 1.75 \times 10\right) \, \text{m}^2$$

$$= (44 \times 0.25 \times 10) \text{ m}^2$$

 $= 110 \text{ m}^2$

Therefore, the inner curved surface area of the circular well is 110 m².

Cost of plastering 1 m² area = Rs 40

Cost of plastering 110 m² area = Rs (110 × 40)

= Rs 4400

Therefore, the cost of plastering the CSA of this well is Rs 4400.

Question 8:

In a hot water heating system, there is a cylindrical pipe of length 28 m and diameter 5 cm. Find the total radiating surface in the system. $\left[\text{Assume }\pi=\frac{22}{7}\right]$

Answer 8:

Height (h) of cylindrical pipe = Length of cylindrical pipe = 28 m

Radius (r) of circular end of pipe = $\frac{5}{2}$ = 2.5 cm = 0.025 m

CSA of cylindrical pipe = $2\pi rh$

$$= \left(2 \times \frac{22}{7} \times 0.025 \times 28\right) \,\mathrm{m}^2$$

 $= 4.4 \text{ m}^2$

The area of the radiating surface of the system is 4.4 m².

Question 9:

Find

- (i) The lateral or curved surface area of a closed cylindrical petrol storage tank that is 4.2 m in diameter and 4.5 m high.
- (ii) How much steel was actually used, if $\frac{1}{12}$ of the steel actually used was wasted in making the

tank. Assume
$$\pi = \frac{22}{7}$$

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 9:

Height (h) of cylindrical tank = 4.5 m

Radius (r) of the circular end of cylindrical tank = $\left(\frac{4.2}{2}\right)$ m = 2.1 m

(i) Lateral or curved surface area of tank = $2\pi rh$

$$= \left(2 \times \frac{22}{7} \times 2.1 \times 4.5\right) \,\mathrm{m}^2$$

$$= (44 \times 0.3 \times 4.5) \text{ m}^2$$

$$= 59.4 \, \text{m}^2$$

Therefore, CSA of tank is 59.4 m².

(ii) Total surface area of tank = $2\pi r (r + h)$

$$= \left[2 \times \frac{22}{7} \times 2.1 \times (2.1 + 4.5)\right] \,\mathrm{m}^2$$

$$= (44 \times 0.3 \times 6.6) \text{ m}^2$$

$$= 87.12 \text{ m}^2$$

Let A m² steel sheet be actually used in making the tank.

$$\therefore A \left(1 - \frac{1}{12} \right) = 87.12 \text{ m}^2$$

$$\Rightarrow$$
 A = $\left(\frac{12}{11} \times 87.12\right)$ m²

$$\Rightarrow$$
 A = 95.04 m²

Therefore, 95.04 m² steel was used in actual while making such a tank.

Question 10:

In the given figure, you see the frame of a lampshade. It is to be covered with a decorative cloth. The frame has a base diameter of 20 cm and height of 30 cm. A margin of 2.5 cm is to be given for folding it over the top and bottom of the frame. Find how much cloth is required for covering

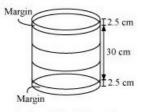

the lampshade. Assume
$$\pi = \frac{22}{7}$$

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 10:

Height (h) of the frame of lampshade = (2.5 + 30 + 2.5) cm = 35 cm

Radius (*r*) of the circular end of the frame of lampshade = $\left(\frac{20}{2}\right)$ cm = 10 cm

Cloth required for covering the lampshade = $2\pi rh$

$$= \left(2 \times \frac{22}{7} \times 10 \times 35\right) \text{ cm}^2$$
$$= 2200 \text{ cm}^2$$

Hence, for covering the lampshade, 2200 cm² cloth will be required.

Question 11:

The students of a Vidyalaya were asked to participate in a competition for making and decorating penholders in the shape of a cylinder with a base, using cardboard. Each penholder was to be of radius 3 cm and height 10.5 cm. The Vidyalaya was to supply the competitors with cardboard. If there were 35 competitors, how much cardboard was required to be bought for the

competition? Assume
$$\pi = \frac{22}{7}$$

Answer 11:

Radius (r) of the circular end of cylindrical penholder = 3 cm

Height (h) of penholder = 10.5 cm

Surface area of 1 penholder = CSA of penholder + Area of base of penholder

$$= 2\pi rh + \pi r^2$$

$$= \left[2 \times \frac{22}{7} \times 3 \times 10.5 + \frac{22}{7} \times (3)^{2}\right] \text{ cm}^{2}$$

$$= \left(132 \times 1.5 + \frac{198}{7}\right) \text{ cm}^{2}$$

$$= \left(198 + \frac{198}{7}\right) \text{ cm}^{2}$$

$$= \frac{1584}{7} \text{ cm}^{2}$$

Area of cardboard sheet used by 1 competitor = $\frac{1584}{7}$ cm²

Area of cardboard sheet used by 35 competitors

$$=\left(\frac{1584}{7}\times35\right)$$
 cm² = 7920 cm²

Therefore, 7920 cm² cardboard sheet will be bought.

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

MATHS -9 (CH-13-13.3- SURFACE AREAS & VOLUMES)

Ouestion 1:

Diameter of the base of a cone is 10.5 cm and its slant height is 10 cm. Find its curved surface area. $\left[\text{Assume } \pi = \frac{22}{7} \right]$

Answer 1:

Radius (r) of the base of cone = $\left(\frac{10.5}{2}\right)$ cm = 5.25 cm Slant height (l) of cone = 10 cm CSA of cone = $\pi r l$

$$= \left(\frac{22}{7} \times 5.25 \times 10\right) \text{ cm}^2 = \left(22 \times 0.75 \times 10\right) \text{ cm}^2 = 165 \text{ cm}^2$$

Therefore, the curved surface area of the cone is 165 cm².

Question 2:

Find the total surface area of a cone, if its slant height is 21 m and diameter of its base is 24 m.

Assume
$$\pi = \frac{22}{7}$$

Answer 2:

Radius (*r*) of the base of cone = $\left(\frac{24}{2}\right)$ m = 12 m

Slant height (/) of cone = 21 m

Total surface area of cone = $\pi r(r + 1)$

$$= \left[\frac{22}{7} \times 12 \times (12 + 21)\right] \text{ m}^2$$
$$= \left(\frac{22}{7} \times 12 \times 33\right) \text{ m}^2$$
$$= 1244.57 \text{ m}^2$$

Question 3:

Curved surface area of a cone is 308 cm² and its slant height is 14 cm. Find (i) radius of the base and (ii) total surface area of the cone.

Assume
$$\pi = \frac{22}{7}$$

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 3:

(i) Slant height (/) of cone = 14 cm

Let the radius of the circular end of the cone be r.

We know, CSA of cone = πrl

(308) cm² =
$$\left(\frac{22}{7} \times r \times 14\right)$$
 cm

$$\Rightarrow r = \left(\frac{308}{44}\right) \text{ cm} = 7 \text{ cm}$$

Therefore, the radius of the circular end of the cone is 7 cm.

(ii) Total surface area of cone = CSA of cone + Area of base

$$= \pi r l + \pi r^2$$

$$= \left[308 + \frac{22}{7} \times \left(7\right)^2\right] \text{ cm}^2$$

$$=(308+154)$$
 cm²

$$= 462 \text{ cm}^2$$

Therefore, the total surface area of the cone is 462 cm².

Question 4:

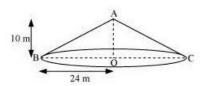

A conical tent is 10 m high and the radius of its base is 24 m. Find

(i) slant height of the tent

(ii) cost of the canvas required to make the tent, if the cost of 1 m² canvas is Rs 70.

Assume
$$\pi = \frac{22}{7}$$

Answer 4:

(i) Let ABC be a conical tent.

Height (h) of conical tent = 10 m

Radius (r) of conical tent = 24 m

Let the slant height of the tent be I.

In ΔABO,

$$AB^2 = AO^2 + BO^2$$

$$P = h^2 + r^2$$

$$= (10 \text{ m})^2 + (24 \text{ m})^2$$

$$= 676 \, \text{m}^2$$

Therefore, the slant height of the tent is 26 m.

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

(ii) CSA of tent =
$$\pi r l$$

= $\left(\frac{22}{7} \times 24 \times 26\right) m^2$
= $\frac{13728}{7} m^2$

Cost of 1 m² canvas = Rs 70

Cost of
$$\frac{13728}{7}$$
 m² canvas = Rs $\left(\frac{13728}{7} \times 70\right)$

= Rs 137280

Therefore, the cost of the canvas required to make such a tent is Rs 137280.

Question 5:

What length of tarpaulin 3 m wide will be required to make conical tent of height 8 m and base radius 6 m? Assume that the extra length of material that will be required for stitching margins and wastage in cutting is approximately 20 cm. [Use π = 3.14]

Answer 5:

Height (h) of conical tent = 8 m

Radius (r) of base of tent = 6 m

Slant height (1) of tent = $\sqrt{r^2 + h^2}$

$$=(\sqrt{6^2+8^2})$$
 m $=(\sqrt{100})$ m $=10$ m

CSA of conical tent = πrl

$$= (3.14 \times 6 \times 10) \text{ m}^2$$

 $= 188.4 \, \text{m}^2$

Let the length of tarpaulin sheet required be I.

As 20 cm will be wasted, therefore, the effective length will be (/-0.2 m).

Breadth of tarpaulin = 3 m

Area of sheet = CSA of tent

$$[(/-0.2 \text{ m}) \times 3] \text{ m} = 188.4 \text{ m}^2$$

 $I - 0.2 \, \text{m} = 62.8 \, \text{m}$

l = 63 m

Therefore, the length of the required tarpaulin sheet will be 63 m.

Question 6:

The slant height and base diameter of a conical tomb are 25 m and 14 m respectively. Find the cost of white-washing its curved surface at the rate of Rs 210 per 100 m². Assume $\pi = \frac{22}{7}$

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 6:

Slant height (1) of conical tomb = 25 m

Base radius (r) of tomb = $\frac{14}{2}$ = 7 m

CSA of conical tomb = πrl

$$= \left(\frac{22}{7} \times 7 \times 25\right) \, m^2$$

 $= 550 \text{ m}^2$

Cost of white-washing 100 m² area = Rs 210

Cost of white-washing 550 m² area = Rs $\left(\frac{210 \times 550}{100}\right)$

= Rs 1155

Therefore, it will cost Rs 1155 while white-washing such a conical tomb.

Question 7:

A joker's cap is in the form of right circular cone of base radius 7 cm and height 24 cm. Find the area of the sheet required to make 10 such caps. $\left[\text{Assume } \pi = \frac{22}{7} \right]$

Answer 7:

Radius (r) of conical cap = 7 cm

Height (h) of conical cap = 24 cm

Slant height (/) of conical cap = $\sqrt{r^2 + h^2}$

$$= \left[\sqrt{(7)^2 + (24)^2} \right] \text{ cm} = \left(\sqrt{625} \right) \text{ cm} = 25 \text{ cm}$$

CSA of 1 conical cap = πrl

$$= \left(\frac{22}{7} \times 7 \times 25\right) \text{ cm}^2 = 550 \text{ cm}^2$$

CSA of 10 such conical caps = (10×550) cm² = 5500 cm²

Therefore, 5500 cm² sheet will be required.

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 8:

A bus stop is barricaded from the remaining part of the road, by using 50 hollow cones made of recycled cardboard. Each cone has a base diameter of 40 cm and height 1 m. If the outer side of each of the cones is to be painted and the cost of painting is Rs 12 per m², what will be the cost of painting all these cones? (Use π = 3.14 and take $\sqrt{1.04}$ = 1.02).

Answer 8:

Radius (r) of cone =
$$\frac{40}{2}$$
 = 20 cm = 0.2 m

Slant height (1) of cone =
$$\sqrt{h^2 + r^2}$$

$$= \left[\sqrt{(1)^2 + (0.2)^2} \right] m = (\sqrt{1.04}) m = 1.02 m$$

CSA of each cone =
$$\pi rI$$

=
$$(3.14 \times 0.2 \times 1.02)$$
 m² = 0.64056 m²

CSA of 50 such cones =
$$(50 \times 0.64056) \text{ m}^2$$

$$= 32.028 \text{ m}^2$$

Cost of painting 32.028
$$m^2$$
 area = Rs (32.028 × 12)

Therefore, it will cost Rs 384.34 in painting 50 such hollow cones.

MATHS -9 (CH-13-13.4- SURFACE AREAS & VOLUMES)

Question 1:

Find the surface area of a sphere of radius:

Assume
$$\pi = \frac{22}{7}$$

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 1:

(i) Radius (r) of sphere = 10.5 cm

Surface area of sphere = $4\pi r^2$

$$= \left[4 \times \frac{22}{7} \times (10.5)^2\right] \text{ cm}^2$$

$$= \left(4 \times \frac{22}{7} \times 10.5 \times 10.5\right) \text{ cm}^2$$

$$=(88\times1.5\times10.5)$$
 cm²

 $=1386 \text{ cm}^2$

Therefore, the surface area of a sphere having radius 10.5cm is 1386 cm².

(ii) Radius(r) of sphere = 5.6 cm

Surface area of sphere = $4\pi r^2$

$$= \left[4 \times \frac{22}{7} \times (5.6)^2\right] \text{ cm}^2$$

$$=(88\times0.8\times5.6)$$
 cm²

$$= 394.24 \text{ cm}^2$$

Therefore, the surface area of a sphere having radius 5.6 cm is 394.24 cm².

(iii) Radius (r) of sphere = 14 cm

Surface area of sphere = $4\pi r^2$

$$= \left[4 \times \frac{22}{7} \times \left(14\right)^2\right] \text{ cm}^2$$

$$=(4\times44\times14)$$
 cm²

 $= 2464 \text{ cm}^2$

Therefore, the surface area of a sphere having radius 14 cm is 2464 cm².

Question 2:

Find the surface area of a sphere of diameter:

(i) 14 cm (ii) 21 cm (iii) 3.5 m

Assume
$$\pi = \frac{22}{7}$$

Answer 2:

(i) Radius (r) of sphere =
$$\frac{\text{Diameter}}{2} = \left(\frac{14}{2}\right) \text{ cm} = 7 \text{ cm}$$

Surface area of sphere = $4\pi r^2$

$$= \left(4 \times \frac{22}{7} \times (7)^2\right) \text{cm}^2$$

$$=(88\times7)$$
cm²

$$= 616 \text{ cm}^2$$

Therefore, the surface area of a sphere having diameter $14\ cm$ is $616\ cm^2$.

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

(ii) Radius (*r*) of sphere = $\frac{21}{2}$ = 10.5 cm

Surface area of sphere = $4\pi r^2$

$$= \left[4 \times \frac{22}{7} \times \left(10.5\right)^2\right] \text{ cm}^2$$

 $=1386 \text{ cm}^2$

Therefore, the surface area of a sphere having diameter 21 cm is 1386 cm².

(iii) Radius (t) of sphere = $\frac{3.5}{2}$ = 1.75 m

Surface area of sphere = $4\pi r^2$

$$= \left[4 \times \frac{22}{7} \times (1.75)^2\right] m^2$$

 $= 38.5 \text{ m}^2$

Therefore, the surface area of the sphere having diameter 3.5 m is 38.5 m².

Question 3:

Find the total surface area of a hemisphere of radius 10 cm. [Use π = 3.14]

Answer 3:

Radius (r) of hemisphere = 10 cm

Total surface area of hemisphere = CSA of hemisphere + Area of circular end of hemisphere

$$=2\pi r^2+\pi r^2$$

$$=3\pi r^{2}$$

$$= \left[3 \times 3.14 \times (10)^2 \right] \text{ cm}^2$$

- 942 cm²

Therefore, the total surface area of such a hemisphere is 942 cm².

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 4:

The radius of a spherical balloon increases from 7 cm to 14 cm as air is being pumped into it. Find the ratio of surface areas of the balloon in the two cases.

Answer 4:

Radius (r_1) of spherical balloon = 7 cm

Radius (r_2) of spherical balloon, when air is pumped into it = 14 cm

Required ratio = $\frac{\text{Initial surface area}}{\text{Surface area after pumping air into balloon}}$ $= \frac{4\pi r_1^2}{4\pi r_2^2} = \left(\frac{r_1}{r_2}\right)^2$

$$=\left(\frac{7}{14}\right)^2 = \frac{1}{4}$$

Therefore, the ratio between the surface areas in these two cases is 1:4.

Question 5:

A hemispherical bowl made of brass has inner diameter 10.5 cm. Find the cost of tin-plating it on the inside at the rate of Rs 16 per 100 cm². $\left[\text{Assume }\pi = \frac{22}{7}\right]$

Answer 5:

Inner radius (*r*) of hemispherical bowl = $\left(\frac{10.5}{2}\right)$ cm = 5.25 cm

Surface area of hemispherical bowl = $2\pi r^2$

$$= \left[2 \times \frac{22}{7} \times \left(5.25\right)^2\right] \text{ cm}^2$$

=173.25 cm²

Cost of tin-plating 100 cm² area = Rs 16

Cost of tin-plating 173.25 cm² area = Rs $\left(\frac{16 \times 173.25}{100}\right)$ = Rs 27.72

Therefore, the cost of tin-plating the inner side of the hemispherical bowl is Rs 27.72.

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 6:

Find the radius of a sphere whose surface area is 154 cm². $\left[\text{Assume }\pi = \frac{22}{7}\right]$

Answer 6:

Let the radius of the sphere be r.

Surface area of sphere = 154

$$4\pi r^2 = 154 \text{ cm}^2$$

$$r^2 = \left(\frac{154 \times 7}{4 \times 22}\right) \text{ cm}^2 = \left(\frac{7 \times 7}{2 \times 2}\right) \text{ cm}^2$$

$$r = \left(\frac{7}{2}\right) \text{ cm} = 3.5 \text{ cm}$$

Therefore, the radius of the sphere whose surface area is 154 cm² is 3.5 cm.

Question 7:

The diameter of the moon is approximately one-fourth of the diameter of the earth. Find the ratio of their surface area.

Answer 7:

Let the diameter of earth be d. Therefore, the diameter of moon will be $\frac{d}{4}$.

Radius of earth =
$$\frac{d}{2}$$

Radius of moon =
$$\frac{1}{2} \times \frac{d}{4} = \frac{d}{8}$$

Surface area of moon =
$$4\pi \left(\frac{d}{8}\right)^2$$

Surface area of earth =
$$4\pi \left(\frac{d}{2}\right)^2$$

Required ratio =
$$\frac{4\pi \left(\frac{d}{8}\right)^2}{4\pi \left(\frac{d}{2}\right)^2}$$

$$=\frac{4}{64}=\frac{1}{16}$$

Therefore, the ratio between their surface areas will be 1:16.

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 8:

A hemispherical bowl is made of steel, 0.25 cm thick. The inner radius of the bowl is 5 cm. Find the outer curved surface area of the bowl. $\left\lceil \text{Assume } \pi = \frac{22}{7} \right\rceil$

Answer 8:

Inner radius of hemispherical bowl = 5 cm

Thickness of the bowl = 0.25 cm

 \therefore Outer radius (r) of hemispherical bowl = (5 + 0.25) cm

= 5.25 cm

Outer CSA of hemispherical bowl = $2\pi r^2$

$$=2\times\frac{22}{7}\times(5.25 \text{ cm})^2=173.25 \text{ cm}^2$$

Therefore, the outer curved surface area of the bowl is 173.25 cm².

Question 9:

A right circular cylinder just encloses a sphere of radius r (see figure). Find

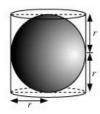

- (i) surface area of the sphere,
- (ii) curved surface area of the cylinder,
- (iii) ratio of the areas obtained in (i) and (ii).

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 9:

(i) Surface area of sphere = $4\pi r^2$

(ii) Height of cylinder = r + r = 2r

Radius of cylinder = r

CSA of cylinder = $2\pi rh$

 $=2\pi r(2r)$

 $= 4\pi r^2$

(iii) Required ratio = $\frac{\text{Surface area of sphere}}{\text{CSA of cylinder}}$

 $=\frac{4\pi r^2}{4\pi r^2}$

 $=\frac{1}{1}$

Therefore, the ratio between these two surface areas is 1:1.

MATHS -9 (CH-13-13.5- SURFACE AREAS & VOLUMES)

Question 1:

A matchbox measures 4 cm \times 2.5 cm \times 1.5 cm. What will be the volume of a packet containing 12 such boxes?

Answer 1:

Matchbox is a cuboid having its length (I), breadth (b), height (I) as 4 cm, 2.5 cm, and 1.5 cm.

Volume of 1 match box = $l \times b \times h$

 $= (4 \times 2.5 \times 1.5) \text{ cm}^3 = 15 \text{ cm}^3$

Volume of 12 such matchboxes = (15×12) cm³

 $= 180 \text{ cm}^3$

Therefore, the volume of 12 match boxes is 180 cm³.

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 2:

A cuboidal water tank is 6 m long, 5 m wide and 4.5 m deep. How many litres of water can it hold? (1 $m^3 = 1000$)

Answer 2:

The given cuboidal water tank has its length (I) as 6 m, breadth (I) as 5 m, and height (I) as 4.5 m.

Volume of tank = $I \times b \times h$

= $(6 \times 5 \times 4.5) \text{ m}^3 = 135 \text{ m}^3$

Amount of water that 1 m³ volume can hold = 1000 litres

Amount of water that 135 m³ volume can hold = (135 × 1000) litres

= 135000 litres

Therefore, such tank can hold up to 135000 litres of water.

Question 3:

A cuboidal vessel is 10 m long and 8 m wide. How high must it be made to hold 380 cubic metres of a liquid?

Answer 3:

Let the height of the cuboidal vessel be h.

Length (1) of vessel = 10 m

Width (b) of vessel = 8 m

Volume of vessel = 380 m³

 $\therefore I \times b \times h = 380$

 $[(10) (8) h] m^2 = 380 m^3$

 $h = 4.75 \,\mathrm{m}$

Therefore, the height of the vessel should be 4.75 m.

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 4:

Find the cost of digging a cuboidal pit 8 m long, 6 m broad and 3 m deep at the rate of Rs 30 per m³

Answer 4:

The given cuboidal pit has its length (I) as 8 m, width (I) as 6 m, and depth (I) as 3 m. Volume of pit = $I \times b \times h$ = $(8 \times 6 \times 3)$ m³ = 144 m³ Cost of digging per m³ volume = Rs 30 Cost of digging 144 m³ volume = Rs (144×30) = Rs (144×30)

Question 5:

The capacity of a cuboidal tank is 50000 litres of water. Find the breadth of the tank, if its length and depth are respectively 2.5 m and 10 m.

Answer 5:

Let the breadth of the tank be b m. Length (I) and depth (I) of tank is 2.5 m and 10 m respectively. Volume of tank = $I \times b \times h$

 $= (2.5 \times b \times 10) \text{ m}^3$

 $= 25b \,\mathrm{m}^3$

Capacity of tank = $25b \text{ m}^3$ = 25000 b litres

∴ 25000 b = 50000

 $\Rightarrow b = 2$

Therefore, the breadth of the tank is 2 m.

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 6:

A village, having a population of 4000, requires 150 litres of water per head per day. It has a tank measuring 20 m \times 15 m \times 6 m. For how many days will the water of this tank last?

Answer 6:

The given tank is cuboidal in shape having its length (I) as 20 m, breadth (b) as 15 m, and height (h) as 6 m.

Capacity of tank = $l \times b \times h$

= $(20 \times 15 \times 6)$ m³ = 1800 m³ = 1800000 litres

Water consumed by the people of the village in 1 day = (4000 × 150) litres

= 600000 litres

Let water in this tank last for n days.

Water consumed by all people of village in n days = Capacity of tank

 $n \times 600000 = 1800000$

n = 3

Therefore, the water of this tank will last for 3 days.

Question 7:

A godown measures 60 m \times 25 m \times 10 m. Find the maximum number of wooden crates each measuring 1.5 m \times 1.25 m \times 0.5 m that can be stored in the godown.

Answer 7:

The godown has its length (I_1) as 60 m, breadth (b_1) as 25 m, height (h_1) as 10 m, while the wooden crate has its length (I_2) as 1.5 m, breadth (b_2) as 1.25 m, and height (h_2) as 0.5 m.

Therefore, volume of godown = $I_1 \times b_1 \times h_1$

 $= (60 \times 25 \times 10) \text{ m}^3$

 $= 15000 \text{ m}^3$

Volume of 1 wooden crate = $l_2 \times b_2 \times h_2$

 $= (1.5 \times 1.25 \times 0.5) \text{ m}^3$

 $= 0.9375 \,\mathrm{m}^3$

Let *n* wooden crates can be stored in the godown.

Therefore, volume of *n* wooden crates = Volume of godown

 $0.9375 \times n = 15000$

 $n = \frac{15000}{0.9375} = 16000$

Therefore, 16,000 wooden crates can be stored in the godown.

Question 8:

A solid cube of side 12 cm is cut into eight cubes of equal volume. What will be the side of the new cube? Also, find the ratio between their surface areas.

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 8:

Side (a) of cube = 12 cm

Volume of cube = $(a)^3$ = $(12 \text{ cm})^3$ = 1728 cm^3

Let the side of the smaller cube be a_1 .

Volume of 1 smaller cube = $\left(\frac{1728}{8}\right)$ cm³ = 216 cm³

$$(a_1)^3 = 216 \text{ cm}^3$$

$$\Rightarrow a_1 = 6 \text{ cm}$$

Therefore, the side of the smaller cubes will be 6 cm.

Ratio between surface areas of cubes = $\frac{\text{Surface area of bigger cube}}{\text{Surface area of smaller cube}}$

$$=\frac{6a^2}{6a_1^2}=\frac{(12)^2}{(6)^2}$$

$$=\frac{4}{1}$$

Therefore, the ratio between the surface areas of these cubes is 4:1.

Question 9:

A river 3 m deep and 40 m wide is flowing at the rate of 2 km per hour. How much water will fall into the sea in a minute?

Answer 9:

Rate of water flow = 2 km per hour

$$= \left(\frac{2000}{60}\right) \, \text{m/min}$$

$$=\left(\frac{100}{3}\right)$$
 m/min

Depth (h) of river = 3 m

Width (b) of river = 40 m

Volume of water flowed in 1 min = $\left(\frac{100}{3} \times 40 \times 3\right)$ m³ = 4000 m³

Therefore, in 1 minute, 4000 m^3 water will fall in the sea.

MATHS -9 (CH-13-13.6- SURFACE AREAS & VOLUMES)

Question 1:

The circumference of the base of cylindrical vessel is 132 cm and its height is 25 cm. How many litres of water can it hold? (1000 cm³ = 1) $\left[\text{Assume } \pi = \frac{22}{7} \right]$

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 1:

Let the radius of the cylindrical vessel be r.

Height (h) of vessel = 25 cm

Circumference of vessel = 132 cm

 $2\pi r = 132 \text{ cm}$

$$r = \left(\frac{132 \times 7}{2 \times 22}\right) \text{ cm} = 21 \text{ cm}$$

Volume of cylindrical vessel = $\pi r^2 h$

$$= \left[\frac{22}{7} \times (21)^2 \times 25\right] \text{ cm}^3$$

 $= 34650 \text{ cm}^3$

$$= \left(\frac{34650}{1000}\right) \text{ litres} \qquad \left[\because 1 \text{ litre} = 1000 \text{ cm}^3\right]$$

= 34.65 litres

Therefore, such vessel can hold 34.65 litres of water.

Question 2:

The inner diameter of a cylindrical wooden pipe is 24 cm and its outer diameter is 28 cm. The length of the pipe is 35 cm. Find the mass of the pipe, if 1 cm³ of wood has a mass of 0.6 g.

Assume
$$\pi = \frac{22}{7}$$

Answer 2:

Inner radius (r_1) of cylindrical pipe = $\left(\frac{24}{2}\right)$ cm = 12 cm

Outer radius (r_2) of cylindrical pipe = $\left(\frac{28}{2}\right)$ cm = 14 cm

Height (h) of pipe = Length of pipe = 35 cm

Volume of pipe = $\pi (r_2^2 - r_1^2) h$

$$= \left[\frac{22}{7} \times \left(14^2 - 12^2 \right) \times 35 \right] \text{cm}^3$$

 $=110\times52 \text{ cm}^{3}$

 $= 5720 \text{ cm}^3$

Mass of 1 cm³ wood = 0.6 g

Mass of 5720 cm³ wood = (5720×0.6) q

= 3432 g

= 3.432 kg

DPM CLASSES & COMPUTERS

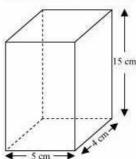

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 3:

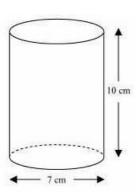

A soft drink is available in two packs – (i) a tin can with a rectangular base of length 5 cm and width 4 cm, having a height of 15 cm and (ii) a plastic cylinder with circular base of diameter 7 cm and height 10 cm. Which container has greater capacity and by how much? $\left[\text{Assume } \pi = \frac{22}{7} \right]$

Answer 3:

The tin can will be cuboidal in shape while the plastic cylinder will be cylindrical in shape.

Length (I) of tin can = 5 cm Breadth (I) of tin can = 4 cm Height (I) of tin can = 15 cm Capacity of tin can = $I \times I$ cm = $I \times I$ cm³ = 300 cm³

Radius (r) of circular end of plastic cylinder = $\left(\frac{7}{2}\right)$ cm = 3.5 cm

Height (H) of plastic cylinder = 10 cm Capacity of plastic cylinder = $\pi r^2 H$

=
$$\left[\frac{22}{7} \times (3.5)^2 \times 10\right] \text{ cm}^3$$

= $(11 \times 35) \text{ cm}^3$
= 385 cm^3

Therefore, plastic cylinder has the greater capacity. Difference in capacity = (385 - 300) cm³ = 85 cm³

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 4:

If the lateral surface of a cylinder is $94.2~\text{cm}^2$ and its height is 5 cm, then find (i) radius of its base (ii) its volume. [Use π = 3.14]

Answer 4:

(i) Height (h) of cylinder = 5 cm Let radius of cylinder be r. CSA of cylinder = 94.2 cm² $2\pi rh$ = 94.2 cm² (2 × 3.14 × r × 5) cm = 94.2 cm² r = 3 cm (ii) Volume of cylinder = $\pi r^2 h$ = (3.14 × (3)² × 5) cm³ = 141.3 cm³

Question 5:

It costs Rs 2200 to paint the inner curved surface of a cylindrical vessel 10 m deep. If the cost of painting is at the rate of Rs 20 per m^2 , find

- (i) Inner curved surface area of the vessel
- (ii) Radius of the base
- (iii) Capacity of the vessel

Assume
$$\pi = \frac{22}{7}$$

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 5:

(i) Rs 20 is the cost of painting 1 m² area.

Rs 2200 is the cost of painting =
$$\left(\frac{1}{20} \times 2200\right)$$
 m² area

Therefore, the inner surface area of the vessel is 110 m².

(ii) Let the radius of the base of the vessel be r.

Height (h) of vessel = 10 m

Surface area = $2\pi rh$ = 110 m²

$$\Rightarrow \left(2 \times \frac{22}{7} \times r \times 10\right) \text{ m} = 110 \text{ m}^2$$

$$\Rightarrow r = \left(\frac{7}{4}\right)$$
 m = 1.75 m

(iii) Volume of vessel = $\pi r^2 h$

$$= \left[\frac{22}{7} \times (1.75)^2 \times 10\right] \,\mathrm{m}^3$$

 $= 96.25 \,\mathrm{m}^3$

Therefore, the capacity of the vessel is 96.25 m³ or 96250 litres.

Question 6:

The capacity of a closed cylindrical vessel of height 1 m is 15.4 litres. How many square metres of metal sheet would be needed to make it? $\left[\text{Assume } \pi = \frac{22}{7} \right]$

Answer 6:

Let the radius of the circular end be r.

Height (h) of cylindrical vessel = 1 m

Volume of cylindrical vessel = 15.4 litres = 0.0154 m³

 $\pi r^2 h = 0.0154 \text{ m}^3$

$$\left(\frac{22}{7} \times r^2 \times 1\right) \mathbf{m} = 0.0154 \ \mathbf{m}^3$$

 $\Rightarrow r = 0.07 \text{ m}$

Total surface area of vessel = $2\pi r(r+h)$

$$= \left[2 \times \frac{22}{7} \times 0.07 (0.07 + 1)\right] \text{ m}^2$$
$$= 0.44 \times 1.07 \text{ m}^2$$
$$= 0.4708 \text{ m}^2$$

Therefore, 0.4708 m² of the metal sheet would be required to make the cylindrical vessel.

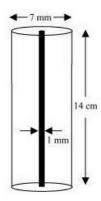

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 7:

A lead pencil consists of a cylinder of wood with solid cylinder of graphite filled in the interior. The diameter of the pencil is 7 mm and the diameter of the graphite is 1 mm. If the length of the pencil is 14 cm, find the volume of the wood and that of the graphite. $\left[\text{Assume } \pi = \frac{22}{7} \right]$

Answer 7:

Radius
$$(r_1)$$
 of pencil = $\left(\frac{7}{2}\right)$ mm = $\left(\frac{0.7}{2}\right)$ cm = 0.35 cm

Radius
$$(r_2)$$
 of graphite = $\left(\frac{1}{2}\right)$ mm = $\left(\frac{0.1}{2}\right)$ cm = 0.05 cm

Volume of wood in pencil = $\pi (r_1^2 - r_2^2) h$

$$= \left[\frac{22}{7} \left\{ (0.35)^2 - (0.05)^2 \times 14 \right\} \right] \text{ cm}^3$$

$$= \left[\frac{22}{7} (0.1225 - 0.0025) \times 14 \right] \text{ cm}^3$$

$$=(44\times0.12)$$
 cm³

$$= 5.28 \text{ cm}^3$$

Volume of graphite
$$= \pi r_2^2 h = \left[\frac{22}{7} \times (0.05)^2 \times 14 \right] cm^3$$

= $(44 \times 0.0025) cm^3$
= $0.11 cm^3$

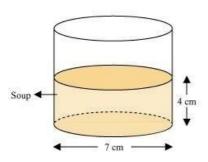

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 8:

A patient in a hospital is given soup daily in a cylindrical bowl of diameter 7 cm. If the bowl is filled with soup to a height of 4 cm, how much soup the hospital has to prepare daily to serve

250 patients?
$$\left[\text{Assume } \pi = \frac{22}{7} \right]$$

Answer 8:

Radius (*t*) of cylindrical bowl = $\left(\frac{7}{2}\right)$ cm = 3.5 cm

Height (h) of bowl, up to which bowl is filled with soup = 4 cm Volume of soup in 1 bowl = $\pi r^2 h$

$$= \left(\frac{22}{7} \times (3.5)^2 \times 4\right) \text{ cm}^3$$

$$= (11 \times 3.5 \times 4) \text{ cm}^3$$

 $= 154 \text{ cm}^3$

Volume of soup given to 250 patients = (250×154) cm³

- $= 38500 \text{ cm}^3$
- = 38.5 litres.

MATHS -9 (CH-13-13.7- SURFACE AREAS & VOLUMES)

Question 1:

Find the volume of the right circular cone with

(i) radius 6 cm, height 7 cm

(ii) radius 3.5 cm, height 12 cm

Assume
$$\pi = \frac{22}{7}$$

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 1:

(i) Radius (r) of cone = 6 cm

Height (h) of cone = 7 cm

Volume of cone = $\frac{1}{3}\pi r^2 h$

$$= \left[\frac{1}{3} \times \frac{22}{7} \times (6)^2 \times 7 \right] \text{ cm}^3$$

$$=(12\times22)$$
 cm³

$$= 264 \text{ cm}^3$$

Therefore, the volume of the cone is 264 cm³.

(ii) Radius (r) of cone = 3.5 cm

Height (h) of cone = 12 cm

Volume of cone =
$$\frac{1}{3}\pi r^2 h$$

$$= \left[\frac{1}{3} \times \frac{22}{7} \times (3.5)^2 \times 12\right] \text{ cm}^3$$

$$= \left(\frac{1}{3} \times 22 \times \frac{1}{2} \times 3.5 \times 12\right) \text{ cm}^3$$

$$=154 \text{ cm}^3$$

Therefore, the volume of the cone is 154 cm³.

Question 2:

Find the capacity in litres of a conical vessel with

- (i) radius 7 cm, slant height 25 cm
- (ii) height 12 cm, slant height 13 cm

Assume
$$\pi = \frac{22}{7}$$

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 2:

(i) Radius (r) of cone = 7 cm Slant height (l) of cone = 25 cm Height (h) of cone = $\sqrt{l^2 - r^2}$

$$=\left(\sqrt{25^2-7^2}\right)$$
 cm

Volume of cone = $\frac{1}{3}\pi r^2 h$

$$= \left(\frac{1}{3} \times \frac{22}{7} \times (7)^2 \times 24\right) \text{ cm}^3$$

$$=(154\times8)$$
 cm³

$$=1232 \text{ cm}^3$$

Therefore, capacity of the conical vessel

=
$$\left(\frac{1232}{1000}\right)$$
 litres $\left(1 \text{ litre} = 1000 \text{ cm}^3\right)$
= 1.232 litres

(ii) Height (*h*) of cone = 12 cm

Slant height (I) of cone = 13 cm

Radius (r) of cone =
$$\sqrt{l^2 - h^2}$$

$$=\left(\sqrt{13^2-12^2}\right) \text{ cm}$$

$$=5$$
 cm

Volume of cone = $\frac{1}{3}\pi r^2 h$

$$= \left[\frac{1}{3} \times \frac{22}{7} \times (5)^2 \times 12 \right] \text{ cm}^3$$

$$= \left(4 \times \frac{22}{7} \times 25\right) \text{ cm}^3$$

$$=\left(\frac{2200}{7}\right) \text{ cm}^3$$

Therefore, capacity of the conical vessel

$$=$$
 $\left(\frac{2200}{7000}\right)$ litres $\left(1 \text{ litre} = 1000 \text{ cm}^3\right)$

$$=\frac{11}{35}$$
 litres

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 3:

The height of a cone is 15 cm. If its volume is 1570 cm³, find the diameter of its base. [Use π = 3.14]

Answer 3:

Height (h) of cone = 15 cm Let the radius of the cone be r. Volume of cone = 1570 cm³

$$\frac{1}{3}\pi r^2 h = 1570 \text{ cm}^3$$

$$\Rightarrow \left(\frac{1}{3} \times 3.14 \times r^2 \times 15\right) \text{ cm} = 1570 \text{ cm}^3$$

$$\Rightarrow r^2 = 100 \text{ cm}^2$$

$$\Rightarrow r = 10 \text{ cm}$$

Therefore, the diameter of the base of cone is $10 \times 2 = 20$ cm.

Question 4:

If the volume of a right circular cone of height 9 cm is 48π cm³, find the diameter of its base.

Answer 4:

Height (h) of cone = 9 cm Let the radius of the cone be r. Volume of cone = 48π cm³

$$\Rightarrow \frac{1}{3}\pi r^2 h = 48\pi \text{ cm}^3$$

$$\Rightarrow \left(\frac{1}{3}\pi r^2 \times 9\right) \text{ cm} = 48\pi \text{ cm}^3$$

$$\Rightarrow r^2 = 16 \text{ cm}^2$$

$$\Rightarrow r = 4 \text{ cm}$$

Diameter of base = 2r = 8 cm

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 5:

A conical pit of top diameter 3.5 m is 12 m deep. What is its capacity in kilolitres? Assume $\pi = \frac{22}{7}$

Answer 5:

Radius (*t*) of pit =
$$\left(\frac{3.5}{2}\right)$$
 m = 1.75 m
Height (*h*) of pit = Depth of pit = 12 m
Volume of pit = $\frac{1}{3}\pi r^2 h$
= $\left[\frac{1}{3} \times \frac{22}{7} \times (1.75)^2 \times 12\right]$ cm³

Thus, capacity of the pit = (38.5 × 1) kilolitres = 38.5 kilolitres

Question 6:

The volume of a right circular cone is 9856 cm³. If the diameter of the base is 28 cm, find

- (i) height of the cone
- (ii) slant height of the cone
- (iii) curved surface area of the cone

Assume
$$\pi = \frac{22}{7}$$

 $= 38.5 \, \text{m}^3$

Question 6:

The volume of a right circular cone is 9856 cm³. If the diameter of the base is 28 cm, find

- (i) height of the cone
- (ii) slant height of the cone
- (iii) curved surface area of the cone

Assume
$$\pi = \frac{22}{7}$$

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 6:

(i) Radius of cone =
$$\left(\frac{28}{2}\right)$$
 cm = 14 cm

Let the height of the cone be h.

Volume of cone = 9856 cm³

$$\Rightarrow \frac{1}{3}\pi r^2 h = 9856 \text{ cm}^3$$
$$\Rightarrow \left[\frac{1}{3} \times \frac{22}{7} \times (14)^2 \times h\right] \text{ cm}^2 = 9856 \text{ cm}^3$$

h = 48 cm

Therefore, the height of the cone is 48 cm.

(ii) Slant height (/) of cone
$$=\sqrt{r^2+h^2}$$

$$= \left[\sqrt{(14)^2 + (48)^2} \right] \text{ cm}$$
$$= \left[\sqrt{196 + 2304} \right] \text{ cm}$$

= 50 cm

Therefore, the slant height of the cone is 50 cm.

(iii) CSA of cone =
$$\pi rl$$

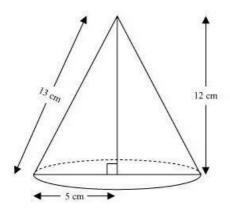

$$= \left(\frac{22}{7} \times 14 \times 50\right) \text{ cm}^2$$

Therefore, the curved surface area of the cone is 2200 cm².

Ouestion 7:

A right triangle ABC with sides 5 cm, 12 cm and 13 cm is revolved about the side 12 cm. Find the volume of the solid so obtained.

Answer 7:

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

When right-angled \triangle ABC is revolved about its side 12 cm, a cone with height (h) as 12 cm, radius (r) as 5 cm, and slant height (h) 13 cm will be formed.

Volume of cone = $\frac{1}{3}\pi r^2 h$

$$= \left[\frac{1}{3} \times \pi \times (5)^2 \times 12\right] \text{ cm}^3$$

 $= 100\pi \text{ cm}^3$

Therefore, the volume of the cone so formed is 100π cm³.

Question 8:

If the triangle ABC in the Question 7 above is revolved about the side 5 cm, then find the volume of the solid so obtained. Find also the ratio of the volumes of the two solids obtained in Ouestions 7 and 8.

Answer 8:

When right-angled \triangle ABC is revolved about its side 5 cm, a cone will be formed having radius (r) as 12 cm, height (h) as 5 cm, and slant height (h) as 13 cm.

Volume of cone = $\frac{1}{3}\pi r^2 h$

$$= \left[\frac{1}{3} \times \pi \times (12)^2 \times 5 \right] \text{ cm}^3$$

 $= 240\pi \text{ cm}^{3}$

Therefore, the volume of the cone so formed is 240π cm³.

Required ratio = $\frac{100\pi}{240\pi}$

$$=\frac{5}{12}=5:12$$

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 9:

A heap of wheat is in the form of a cone whose diameter is 10.5 m and height is 3 m. Find its volume. The heap is to be covered by canvas to protect it from rain. Find the area of the canvas required. Assume $\pi = \frac{22}{7}$

Answer 9:

Radius (
$$r$$
) of heap = $\left(\frac{10.5}{2}\right)$ m = 5.25 m

Height (h) of heap = 3 m

Volume of heap = $\frac{1}{3}\pi r^2 h$

$$= \left(\frac{1}{3} \times \frac{22}{7} \times \left(5.25\right)^2 \times 3\right) \, \mathrm{m}^3$$

 $= 86.625 \text{ m}^3$

Therefore, the volume of the heap of wheat is 86.625 m³.

Area of canvas required = CSA of cone

$$= \pi r l = \pi r \sqrt{r^2 + h^2}$$

$$= \left[\frac{22}{7} \times 5.25 \times \sqrt{(5.25)^2 + (3)^2} \right] \text{ m}^2$$

$$= \left(\frac{22}{7} \times 5.25 \times 6.05 \right) \text{ m}^2$$

 $= 99.825 \text{ m}^2$

Therefore, 99.825 m² canvas will be required to protect the heap from rain.

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

MATHS -9 (CH-13-13.8- SURFACE AREAS & VOLUMES)

Question 1:

Find the volume of a sphere whose radius is

Assume
$$\pi = \frac{22}{7}$$

Answer 1:

(i) Radius of sphere = 7 cm

Volume of sphere = $\frac{4}{3}\pi r^3$

$$= \left[\frac{4}{3} \times \frac{22}{7} \times (7)^3\right] \text{ cm}^3$$

$$= \left(\frac{4312}{3}\right) \text{ cm}^3$$

$$=1437\frac{1}{3}$$
 cm³

Therefore, the volume of the sphere is $1437\frac{1}{3}$ cm³.

(ii) Radius of sphere = 0.63 m

Volume of sphere = $\frac{4}{3}\pi r^3$

$$= \left[\frac{4}{3} \times \frac{22}{7} \times \left(0.63\right)^3\right] \,\mathrm{m}^3$$

$$=1.0478 \text{ m}^3$$

Therefore, the volume of the sphere is 1.05 m³ (approximately).

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Ouestion 2:

Find the amount of water displaced by a solid spherical ball of diameter (i) 28 cm (ii) 0.21 m

Assume
$$\pi = \frac{22}{7}$$

Answer 2:

(i) Radius (r) of ball =
$$\left(\frac{28}{2}\right)$$
 cm = 14 cm

Volume of ball =
$$\frac{4}{3}\pi r^3$$

$$= \left[\frac{4}{3} \times \frac{22}{7} \times \left(14\right)^3\right] \text{ cm}^3$$

$$=11498\frac{2}{3}$$
 cm³

Therefore, the volume of the sphere is $11498\frac{2}{3}$ cm³.

(ii)Radius (*r*) of ball =
$$\left(\frac{0.21}{2}\right)$$
 m = 0.105 m

Volume of ball =
$$\frac{4}{3}\pi r^3$$

$$=\left[\frac{4}{3} \times \frac{22}{7} \times (0.105)^3\right] \text{ m}^3$$

$$= 0.004851 \text{ m}^3$$

Therefore, the volume of the sphere is 0.004851 m³.

Question 3:

The diameter of a metallic ball is 4.2 cm. What is the mass of the ball, if the density of the metal is 8.9 g per cm³? $\left[\text{Assume } \pi = \frac{22}{7}\right]$

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 3:

Radius (*t*) of metallic ball = $\left(\frac{4.2}{2}\right)$ cm = 2.1 cm

Volume of metallic ball = $\frac{4}{3}\pi r^3$

$$= \left[\frac{4}{3} \times \frac{22}{7} \times \left(2.1\right)^{3}\right] \text{ cm}^{3}$$

=38.808 cm³

Density =
$$\frac{\text{Mass}}{\text{Volume}}$$

Mass = Density × Volume

$$= (8.9 \times 38.808) g$$

Hence, the mass of the ball is 345.39 g (approximately).

Question 4:

The diameter of the moon is approximately one-fourth of the diameter of the earth. What fraction of the volume of the earth is the volume of the moon?

Answer 4:

Let the diameter of earth be d. Therefore, the radius of earth will be $\frac{d}{2}$.

Diameter of moon will be $\frac{d}{4}$ and the radius of moon will be $\frac{d}{8}$.

Volume of moon =
$$\frac{4}{3}\pi r^3 = \frac{4}{3}\pi \left(\frac{d}{8}\right)^3 = \frac{1}{512} \times \frac{4}{3}\pi d^3$$

Volume of earth =
$$\frac{4}{3}\pi r^3 = \frac{4}{3}\pi \left(\frac{d}{2}\right)^3 = \frac{1}{8} \times \frac{4}{3}\pi d^3$$

$$\frac{\text{Volume of moon}}{\text{Volume of earth}} = \frac{\frac{1}{512} \times \frac{4}{3} \pi d^3}{\frac{1}{8} \times \frac{4}{3} \pi d^3}$$
$$= \frac{1}{64}$$

$$\Rightarrow$$
 Volume of moon = $\frac{1}{64}$ Volume of earth

Therefore, the volume of moon is $\frac{1}{64}$ of the volume of earth.

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 5:

How many litres of milk can a hemispherical bowl of diameter 10.5 cm hold? Assume $\pi = \frac{22}{7}$

Answer 5:

Radius (*r*) of hemispherical bowl = $\left(\frac{10.5}{2}\right)$ cm = 5.25 cm

Volume of hemispherical bowl = $\frac{2}{3}\pi r^3$

$$= \left[\frac{2}{3} \times \frac{22}{7} \times (5.25)^3\right] \text{ cm}^3$$

Capacity of the bowl = $\left(\frac{303.1875}{1000}\right)$ litre

=0.3031875 litre=0.303 litre (approximately)

Therefore, the volume of the hemispherical bowl is 0.303 litre.

Question 6:

A hemispherical tank is made up of an iron sheet 1 cm thick. If the inner radius is 1 m, then find the volume of the iron used to make the tank. $\left[\text{Assume } \pi = \frac{22}{7} \right]$

Answer 6:

Inner radius (r_1) of hemispherical tank = 1 m Thickness of hemispherical tank = 1 cm = 0.01 m

Outer radius (r_2) of hemispherical tank = (1 + 0.01) m = 1.01 m

Volume of iron used to make such a tank $\pi = \frac{2}{3} \left(r_2^3 - r_1^3 \right)$ $= \left[\frac{2}{3} \times \frac{22}{7} \times \left\{ (1.01)^3 - (1)^3 \right\} \right] \text{ m}^3$ $= \left[\frac{44}{21} \times \left(1.030301 - 1 \right) \right] \text{ m}^3$ $= 0.06348 \text{ m}^3 \quad \text{(approximately)}$

DPM CLASSES & COMPUTERS

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Question 7:

Find the volume of a sphere whose surface area is 154 cm². Assume $\pi = \frac{22}{7}$

Answer 7:

Let radius of sphere be r.

Surface area of sphere = 154 cm²

$$\Rightarrow 4\pi r^2 = 154 \text{ cm}^2$$

$$\Rightarrow r^2 = \left(\frac{154 \times 7}{4 \times 22}\right) \text{ cm}^2$$

$$\Rightarrow r = \left(\frac{7}{2}\right) \text{ cm} = 3.5 \text{ cm}$$

Volume of sphere = $\frac{4}{3}\pi r^3$

$$= \left[\frac{4}{3} \times \frac{22}{7} \times (3.5)^3\right] \text{ cm}^3$$

$$=179\frac{2}{3}$$
 cm³

Therefore, the volume of the sphere is $179\frac{2}{3}$ cm³.

Question 8:

A dome of a building is in the form of a hemisphere. From inside, it was white-washed at the cost of Rs 498.96. If the cost of white-washing is Rs 2.00 per square meter, find the

(i) inside surface area of the dome,

(ii) volume of the air inside the dome. $\left[\text{Assume } \pi = \frac{22}{7} \right]$

Answer 8:

(i) Cost of white-washing the dome from inside = Rs 498.96

Cost of white-washing 1 m^2 area = Rs 2

Therefore, CSA of the inner side of dome = $\left(\frac{498.96}{2}\right)$ m²

= 249.48 m²

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

(ii) Let the inner radius of the hemispherical dome be r.

CSA of inner side of dome = 249.48 m²

$$2\pi r^2 = 249.48 \text{ m}^2$$

$$\Rightarrow 2 \times \frac{22}{7} \times r^2 = 249.48 \text{ m}^2$$
$$\Rightarrow r^2 = \left(\frac{249.48 \times 7}{2 \times 22}\right) \text{ m}^2 = 39.69 \text{ m}^2$$

$$\Rightarrow r = 6.3 \text{ m}$$

Volume of air inside the dome = Volume of hemispherical dome

$$= \frac{2}{3}\pi r^{3}$$

$$= \left[\frac{2}{3} \times \frac{22}{7} \times (6.3)^{3}\right] \text{ m}^{3}$$

$$= 523.908 \text{ m}^{3}$$

= 523.9 m³ (approximately)

Therefore, the volume of air inside the dome is 523.9 m³.

Question 9:

Twenty seven solid iron spheres, each of radius *r* and surface area S are melted to form a sphere with surface area S'. Find the

(i) radius r' of the new sphere, (ii) ratio of S and S'.

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 9:

(i)Radius of 1 solid iron sphere = r

Volume of 1 solid iron sphere = $\frac{4}{3}\pi r^3$

Volume of 27 solid iron spheres = $27 \times \frac{4}{3} \pi r^3$

27 solid iron spheres are melted to form 1 iron sphere. Therefore, the volume of this iron sphere will be equal to the volume of 27 solid iron spheres. Let the radius of this new sphere be r'.

Volume of new solid iron sphere = $\frac{4}{3}\pi r^{3}$

$$\frac{4}{3}\pi r^{3} = 27 \times \frac{4}{3}\pi r^{3}$$

$$r'^3 = 27r^3$$

$$r' = 3r$$

(ii) Surface area of 1 solid iron sphere of radius $r = 4\pi r^2$

Surface area of iron sphere of radius $t' = 4\pi (t')^2$

$$= 4 \pi (3r)^2 = 36 \pi r^2$$

$$\frac{S}{S'} = \frac{4\pi r^2}{36\pi r^2} = \frac{1}{9} = 1:9$$

Question 10:

A capsule of medicine is in the shape of a sphere of diameter 3.5 mm. How much medicine (in mm³) is needed to fill this capsule? $\left\lceil \text{Assume } \pi = \frac{22}{7} \right\rceil$

Answer 10:

Radius (r) of capsule = $\left(\frac{3.5}{2}\right)$ mm = 1.75 mm

Volume of spherical capsule = $\frac{4}{3}\pi r^3$

$$= \left[\frac{4}{3} \times \frac{22}{7} \times (1.75)^3 \right] \text{ mm}^3$$

Therefore, the volume of the spherical capsule is 22.46 mm³.

MATHS -9 (CH-13-13.9- SURFACE AREAS & VOLUMES)

Question 1:

A wooden bookshelf has external dimensions as follows: Height = 110 cm, Depth = 25 cm, Breadth = 85 cm (see the given figure). The thickness of the plank is 5 cm everywhere. The external faces are to be polished and the inner faces are to be painted. If the rate of polishing is 20 paise per cm² and the rate of painting is 10 paise per cm², find the total expenses required for polishing and painting the surface of the bookshelf.

Answer 1:

External height (1) of book self = 85 cm

External breadth (b) of book self = 25 cm

External height (h) of book self = 110 cm

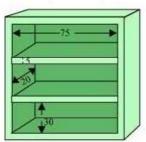

External surface area of shelf while leaving out the front face of the shelf

- = lh + 2 (lb + bh)
- $= [85 \times 110 + 2 (85 \times 25 + 25 \times 110)] \text{ cm}^2$
- $= (9350 + 9750) \text{ cm}^2$
- $= 19100 \text{ cm}^2$

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Area to be polished = $(19100 + 2600) \text{ cm}^2 = 21700 \text{ cm}^2$ Cost of polishing 1 cm² area = Rs 0.20 Cost of polishing 21700 cm² area Rs (21700×0.20) = Rs 4340

It can be observed that length (*I*), breadth (*b*), and height (*I*) of each row of the book shelf is 75 cm, 20 cm, and 30 cm respectively.

Area to be painted in 1 row = 2(I + h) b + Ih

- $= [2 (75 + 30) \times 20 + 75 \times 30] \text{ cm}^2$
- $= (4200 + 2250) \text{ cm}^2$
- $= 6450 \text{ cm}^2$

Area to be painted in 3 rows = (3×6450) cm² = 19350 cm²

Cost of painting 1 cm² area = Rs 0.10

Cost of painting 19350 cm² area = Rs (19350 \times 0.1)

= Rs 1935

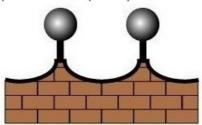

Total expense required for polishing and painting = Rs (4340 + 1935)

= Rs 6275

Therefore, it will cost Rs 6275 for polishing and painting the surface of the bookshelf.

Question 2:

The front compound wall of a house is decorated by wooden spheres of diameter 21 cm, placed on small supports as shown in the given figure. Eight such spheres are used for this purpose, and are to be painted silver. Each support is a cylinder of radius 1.5 cm and height 7 cm and is to be painted black. Find the cost of paint required if silver paint costs 25 paise per cm² and black paint costs 5 paise per cm².

Special for Math's & Science By - Er. Dharmendra Sir (9584873492,7974073108)

Answer 2:

Radius (*r*) of wooden sphere = $\left(\frac{21}{2}\right)$ cm = 10.5 cm

Surface area of wooden sphere = $4\pi r^2$

$$= \left[4 \times \frac{22}{7} \times (10.5)^{2}\right] \text{ cm}^{2} = 1386 \text{ cm}^{2}$$

Radius (r_1) of the circular end of cylindrical support = 1.5 cm

Height (h) of cylindrical support = 7 cm

CSA of cylindrical support = $2\pi rh$

$$= \left[2 \times \frac{22}{7} \times (1.5) \times 7\right] \text{ cm}^2 = 66 \text{ cm}^2$$

Area of the circular end of cylindrical support = $\pi r^2 = \left[\frac{22}{7} \times (1.5)^2\right] \text{ cm}^2$

 $= 7.07 \text{ cm}^2$

Area to be painted silver = $[8 \times (1386 - 7.07)]$ cm²

 $= (8 \times 1378.93) \text{ cm}^2 = 11031.44 \text{ cm}^2$

Cost for painting with silver colour = Rs (11031.44 × 0.25) = Rs 2757.86

Area to be painted black = (8×66) cm² = 528 cm²

Cost for painting with black colour = Rs (528 × 0.05) = Rs 26.40

Total cost in painting = Rs (2757.86 + 26.40)

= Rs 2784.26

Therefore, it will cost Rs 2784.26 in painting in such a way.

Question 3:

The diameter of a sphere is decreased by 25%. By what per cent does its curved surface area decrease?

Answer 3:

Let the diameter of the sphere be d.

Radius
$$(r_1)$$
 of sphere = $\frac{d}{2}$

New radius
$$(r_2)$$
 of sphere $=\frac{d}{2}\left(1-\frac{25}{100}\right)=\frac{3}{8}d$

CSA
$$(S_1)$$
 of sphere = $4\pi r_1^2$

$$=4\pi\bigg(\frac{d}{2}\bigg)^2=\pi d^2$$

CSA (S_2) of sphere when radius is decreased = $4\pi r_2^2$

$$=4\pi \left(\frac{3d}{8}\right)^{2} = \frac{9}{16}\pi d^{2}$$

Decrease in surface area of sphere = S_1 - S_2

$$= \pi d^2 - \frac{9}{16} \pi d^2$$

$$=\frac{7}{16}\pi d^2$$

Percentage decrease in surface area of sphere
$$=\frac{S_1 - S_2}{S_1} \times 100$$

$$=\frac{7\pi d^2}{16\pi d^2} \times 100 = \frac{700}{16} = 43.75\%$$
