

## Tools and Materials

Fresh noble wreath, natural and decorative materials, wooden pliers, wires, ribbons and glue (some materials are different between package A / B)

## Glue Materials

You could use glue for the following materials. Paste glue on the material stem and bottom area.

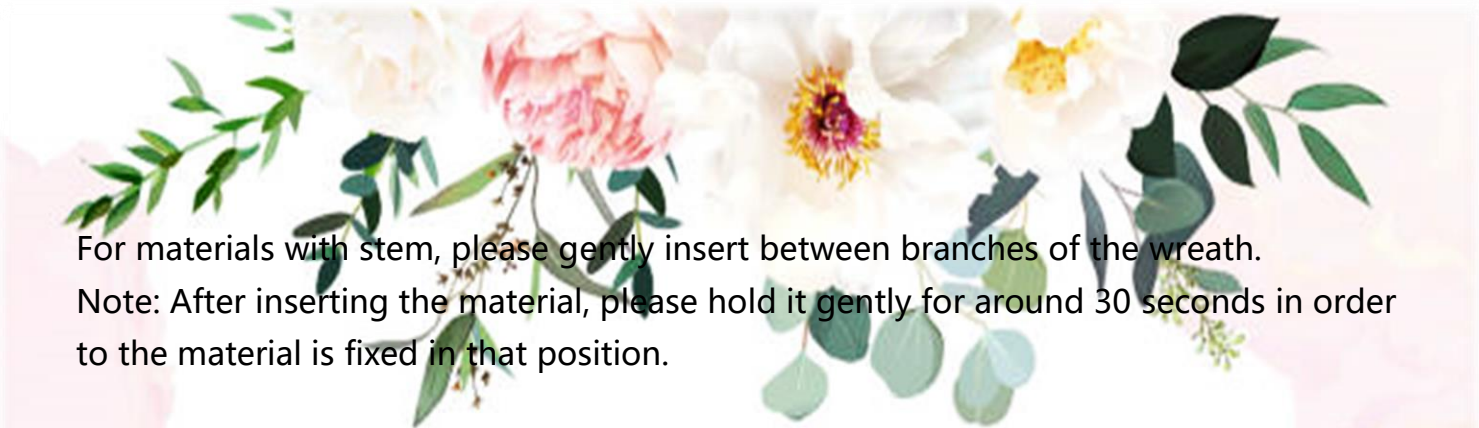

Note: When using the glue, please make sure the air circulation.

After using the glue, please remember to close glue with lid.

For materials with stem, please gently insert between branches of the wreath.  
Note: After inserting the material, please hold it gently for around 30 seconds in order to the material is fixed in that position.

Use wooden pliers to help expand the space between the branches if necessary.

For materials without stem, please gently stick it on the wreath.  
Note: Hold it gently for around 30 seconds in order to the material is fixed in that position.

## Attach materials

For the following materials, you could use wire. Firstly, attach the wire on the materials and fix it on the wreath.

If the wire is not long enough, you could extend it.

## Attach LED light

Attach the wire on the LED light with using plastic tape and then fix it on the back of wreath. It is hidden in the ribbon.

Keep the light wire around the wreath. Take out the paper to activate the power.

## Attach ribbon

Depend on your preference, you could pull the bow ribbons to show two colors. Pass the ribbon through the wreath. Hold two ribbon ends and make a knot.

Take out the paper of bow and leave the glue there, and tape it on the ribbon. Note: Make sure the ribbon could cover the LED switch.
