

Quality you can count on

Skyline® uses OEM equivalent core components at its state-of-the-art manufacturing facility, providing new DPFs and DOCs (not remanufactured) at a lower price than the OEM replacement. Due to superior quality, we provide a warranty of two years, exceeding the OEMs.

Skyline's OEM equivalent ceramic filter core flows exhaust as well as or better than the OEM part. That means low backpressure.

**Lower backpressure
=
more power and less fuel use**

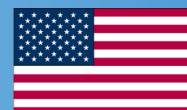

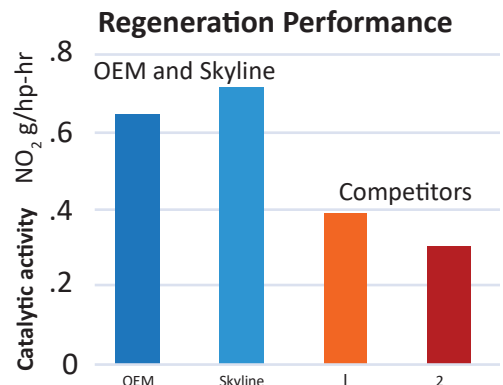

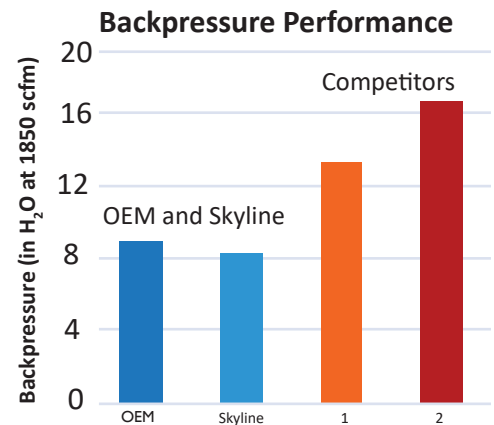

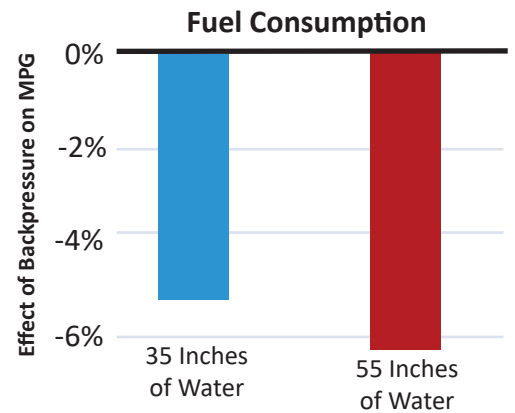

Skyline's OEM equivalent, precious metals based, catalytic coating provides outstanding performance and durability matching the OEM at every level. Dependable catalytic activity keeps your DPF backpressure low and extends the service life.

High backpressure can decrease your miles per gallon by over 5%.

Laboratory high flow testing shows that our competitors have higher backpressure, which will cause your engine to work harder. This results in increased downtime, more fuel consumption, and increased maintenance costs.

A cheap filter will cost you more over time.

Choose Skyline - don't settle for less!

**Designed and
Manufactured
in the U.S.A.**

Skyline

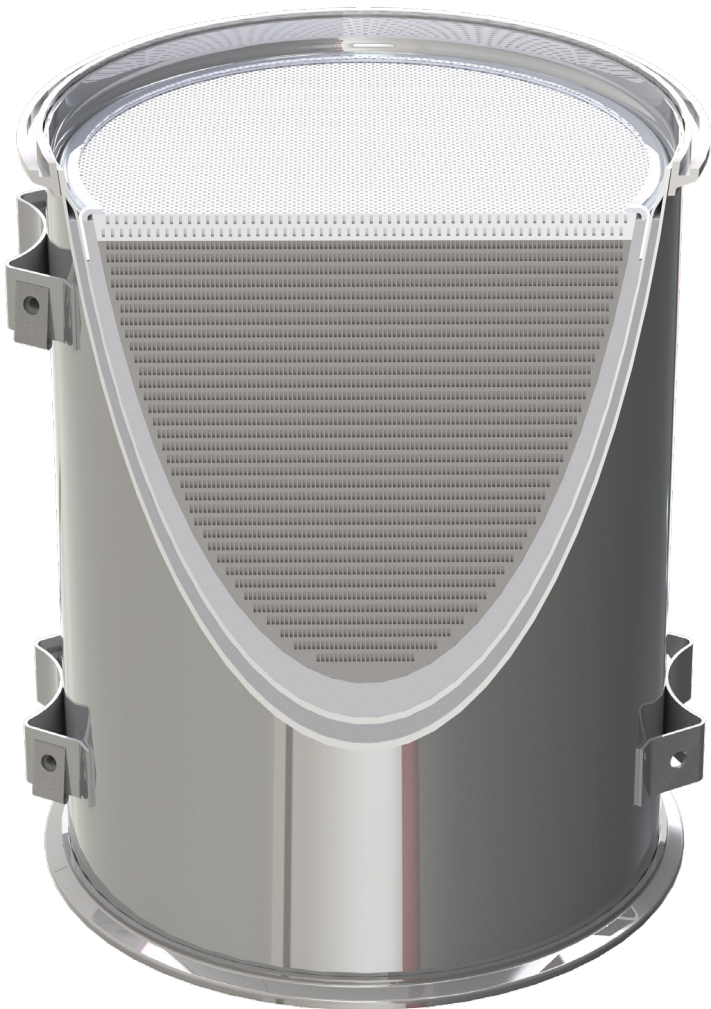

OEM quality, OEM performance, and OEM warranty at an aftermarket price

Key advantages of Skyline

- Superior OEM quality ceramic filter substrates and catalysts
- OEM equivalent performance for optimum fuel consumption
- Outstanding workmanship and quality from our state-of-the-art factory
- Demonstrated durability for extended service life

**NEW FILTER,
NO CORE CHARGE**

Tough OEM quality filter substrate and coating

Stainless steel retaining rings and wire rope for rugged durability

Precision formed stainless steel mantle

Precision machined flanges and bracketry for exact fit

Only quality parts that match OEM performance should be used as a replacement!
