

Skyline vs. Reman

Skyline DPF

- Brand new
- OEM Equivalent
- 3 year warranty
- Proven durability
- Longer service life
- Reduced exhaust restriction
- A fresh start

Reman DPF

- Used part that has been cleaned
- Old core components
- 3-12 month warranty
- Unknown history and mileage
- Unknown life expectancy
- Possible core-charge fee
- A gamble

OEM quality, OEM performance, 3 year warranty, at an aftermarket price

SKYLINE vs. REMAN

A remanufactured DPF is a used DPF that has been cleaned at a centralized facility after years of service. While a reman might appear to be a cost-effective purchase, you are paying a lot of money for an old filter with a completely unknown history. You don't know its mileage, what trucks it has been on, or if it was damaged in the past.

A reman DPF

- Can cost you much more than the initial price
- Has a short warranty – often only 6 months
- Has hundreds of thousands of hard miles on it
- Has an unknown service history
- May soon build up backpressure, require cleaning, and impact your turbocharger or other engine components

Many companies that sell reman DPFs don't recommend cleaning a reman DPF and instead suggest replacing the filter annually. Go figure.

A Skyline DPF

- Is a brand new DPF
- Has a 3 year warranty
- Provides extended cleaning intervals
- Gives you a fresh start

Don't settle for less, use an OEM-equivalent Skyline DPF rather than betting on an old and used reman part.

Skyline: OEM quality, OEM performance, 3 year warranty, at an aftermarket price.
