# FRYER SAFETY

# **Fryer Safety**

**Those who cook in restaurants are especially at risk of burn injuries while cooking with or cleaning fryers.**

**Burns can occur from contact with the fryer itself or from hot splashing oil, or when straining the oil or moving the fryer.**

# Do

- **Always use caution when working around hot oil**
- **Use the correct oil level and cooking temperatures for the fryers**
- **Gently raise and lower fryer baskets while cooking to avoid splashing**
- **Always shake fry basket after frying to remove any excess oil from fries before transferring to bowl**
- **Keep floor surfaces clean and dry to prevent slipping or falling onto hot surfaces. Wear slip-resistant shoes.**
- **Extinguish hot oil/grease fires by using a class K fire extinguisher**

# Don't

- Do not spill water or ice into oil. Do not store employee drinks by fryers. These could be easily bumped into the hot oil and cause a flare-up
- Do not overfill or pour excessive amounts of frozen fries into deep fryer at one time. Overfilling causes excessive splashing and bubbling over of hot oil
- Do not stand too close or lean over hot oil, especially when items are frying
- Do not overheat oil (should always be set to 350 degrees)
- Do not drain or move hot oil container, wait until the oil is cool!

**Any safety, health  
or hazard issues  
at any of your  
locations?**
