

HOW TO TALK TO YOUR LOVED ONES

I was asked by a distraught mom to put pen to paper and explain how to talk to her children who are being coerced, peer pressured or mandated to take an experimental treatment. A treatment for which there is significant risks of adverse effects (estimated at 50%) compared to the live viral infection of which children have negligible if not zero risk of dying from or becoming hospitalized. The CDC data showed only 246 children allegedly died of COVID-19 during 2020 for all of the United States. Why then are the educational institutions, public health agencies and businesses pushing to inject the children who were never at risk of dying or transmitting the virus and put them in face coverings while everyone else can go mask less? That is ***the question***, that every parent and young adult should be asking about, wondering about or should I say, “demanding” to know about. The reality is they will never find the answer in mainstream media, the source of the fraud and deception.

The reason that this is a difficult conversation to have without sounding crazy is that it is impossible for most people to comprehend the magnitude of the coordination that would have had to have taken place to manufacture a “worldwide” pandemic of fear, lockdowns, economic and social collapse. It has to be a real and deadly virus as these trusted agencies are in place to protect the people. The fact that every country in the world has experienced the same destruction; that every news outlet (tv and newspaper) and nearly every scientist and doctor are saying get the injection, how can that many people be wrong?

Without going into the psychological reasons for following the crowd when the concerned mom and dad appear to be the minority voice, let us just say the child or family member is truth “hesitant”. They have unlikely researched as much as the parent has done to conclude that this injection has far more risks than benefits. Now what do you say to “convince” your child that you are telling the truth and everybody else is lying that the jab is approved, safe and effective.

The first thing to understand is that there is no “convincing” your child or family member to change their mind. They are looking for any reason to discredit everything that you would provide in the way of evidence. For every piece of documentation you provide, they will find a counter one. They want to travel. They want to go to school. They do not want to wear the face covering (equivalent of scarlet letter or yellow star) and be tested twice a week. They do not want any more peer pressure or lose the love of their life. An extremely difficult place to walk without knowledge and strength of conviction where the easy path is to take the injection. They do not want you to be right because of what perceive to be giving up.

The change has to come from you changing your perspective. To come from a place of love and compassionate detachment. To release the expectation of the final outcome. To hold your truth and conviction of what is right for your own life without pushing it onto your child or loved ones, unless the child is a minor than you decide. It is their life, and they have to take responsibility for their choices. They need to know that this is a choice that they are making for themselves and not being forced on them. There is ALWAYS another choice.

Maintain your composure at all times to the point of not caring what they do, even when you want to scream and shake them into seeing your way. You tell them that you love them, and you do not want to see any harm come to them. You are just making sure that they have true informed consent which means understanding the risks that are not being shared by those that should know better.

HOW TO TALK TO YOUR LOVED ONES

ASK THEM:

- 1) The spike protein goes beyond the arm and makes its way throughout the body, including the ovaries and placenta and has caused at one point in time 920 miscarriages. Are you OK with possibly never having children?
- 2) The spike protein can cross the placenta and affect the fetus. Are you OK with possibly having an adult-child that you will need to take care of into old age?
- 3) The spike protein has caused inflammation in the heart of young adults. This is not rare or a minor condition. Are you OK with possibly having a heart condition that could kill you unexpectedly 5, 10, 20 years from now?
- 4) The spike protein has caused blood clots and killed at least 4 airline pilots. Deep vein thrombosis is a risk for trans-continental flights before COVID. Are you OK with possibly never being able to fly again if airlines determine it is too risky for passengers who got the injection?

If you are OK with taking on these life changing risks, then there is nothing more to be said. If not, know that there are other schools, other friends, other loves, and other ways to travel. There is no going back, and you only have this one life to live. It is your choice how you live it.
