

Welcome to CanadaLog & Hybrid Timber Homes Inc.

In over 30 years, our teams have built log and timber homes of all shapes and sizes in Ottawa-Carleton, the Outaouais, and throughout cottage country for well over a hundred mile radius.

We provide a full complement of services including design, consulting, budgetary planning and construction project management. Using this combination of services and our experience we can often save our clients 25% on the cost of their log or timber home, and ensure a better quality construction.

Distinctive Log and Hybrid Timber Homes

Maisons

CanadaLog
& Hybrid Timber
Homes

Welcome to the Old World

Our goal at CanadaLog & Hybrid Timber Homes is to make log and timber homes more economical and accessible to clients. We provide a wide variety of log, hybrid timber, using pre-engineered log construction. Our log home plans and kits are well thought out, economical, and are available in a broad range of models. We also provide complete design& Plans, consulting and construction services. Let us know how we can help you!

Engineered Log

It's no secret that most log home suppliers see the client coming from miles away. If you love log construction, you'll probably be willing to sacrifice a lot to get the home of your dreams, and vendors know it.

CanadaLog Homes' vision is different. We provide economical, value-laden log home kits – not just log walls and lumber. We offer one of the most complete kits available in order to eliminate surprises. Our engineered log home kits are made of Eastern White Pine and come in a variety of sizes and profiles.

Hybrid Timber

If you love timber frame homes but are concerned about costs, hybrid timber is just for you. Our hybrid timber frame kits provide you with the look and feel of structural post and beam at affordable prices.

In a hybrid timber design, the shell is designed and built using conventional techniques (e.g., stick framing, log, pre-engineered panels), then non-structural timbers are added to the finished shell to replicate the timber frame structure.

This reduces total costs and lets you define the look and feel of the timber elements in your home.

We offer one of the most complete kits available in order to eliminate surprises. It includes:

- the complete log wall and/or Timber Frame system
- all supporting stick frame elements including walkout walls, kneewalls, gable ends, dormers and overhangs
- engineered floor system and sheathing
- engineered roof truss system, sheathing and shingles
- all interior partitions and doors
- all exterior doors and windows

With **CanadaLog & Hybrid Timber Homes**, you're not just purchasing lumber. You're buying into 30 years of experience - we've built them, we know them, and we know all the challenges involved in getting it right and on budget. We can guide you on what is involved in building a log home, where money can best be spent, which upgrades offer true value and satisfaction and which ones don't, what needs to be done up front and what can be done later as an upgrade and how to get the maximum quality without blowing your budget. You can rest assured that CanadaLog Homes is dedicated to offering you superior service and satisfaction as your dream home comes alive.
