--	--

Urban Area (Section 2)

--	--

Urban Area (Section 3)

--	--

A Technician is defined as a KASOTC trained operator in the Range Operations Center (ROC) or on one of KASOTC's automated firing ranges. This technician controls all equipment associated with the training area and facilitates any use of battlefield effects during scenarios and exercises. The technician also facilitates integration of the networked After-Action Review facility when used with the Urban Area, CQB House or Airbus 300. Battlefield Effects are defined as simulated machine gun fire, simulated explosions from concussion wave canons and other devices, sounds of the battlefield and smells of the battlefield. AAR Facility is located in the Urban Area and is connected to the Range Operations Center (ROC) through a fiber optic network. This facility is used for after action reviews and can be used to view video of training captured by KASOTC's 350 day/night cameras.
