## **Environmental**

### **What this policy covers**

This policy sets out the Company's commitment towards the quality of its products being produced  
This policy sets out the Company's commitment to incorporate sustainability into their core business through internal and external efforts.

### **Company Objectives**

The Company will adopt the following practices to incorporate sustainability:

- Conserve energy, water and natural resources where possible.
- Reuse, Recycle and Reduce.

### **Conserve energy, water and natural resources.**

The Company conserves its energy by using energy saving technology. This can be seen throughout the unit, where lights have timers to ensure they do not stay on with no one using the room. All employees are educated in energy saving. This helps towards consistency of machinery being turned off when not in use. Our bigger machinery has "idle functions" where they will turn off to conserve energy when not in use.

The Company uses very little water in the day to day running of the business, when the use of water is necessary for cleaning the delivery vans. Vans must be cleaned together using a tool where the flow of water can easily be stopped and started again.

### **Reuse, Recycle and Reduce.**

The Company will ensure all employees are trained to Reuse, Recycle and Reduce where possible.

When using material cut off will be stored to enable reuse were possible. All material that cannot be reused will be recycled. The recycling process is has been contracted out to reputable refuse disposals, where items are recycled. The Company are constantly looking at innovative ideas to help reduce the use of materials.
