

Dr. Christian Navarro-Torres is a cognitive neuroscientist with a Ph.D. in Language Science from the University of California, Irvine, and an M.S. in Cognitive Psychology from The Pennsylvania State University. His academic training focused on brain-behavior relationships and neurocognitive variability in both healthy and clinical populations.

He completed postdoctoral fellowships at Georgetown University and Princeton University, where his research examined neural and cognitive systems involved in language, executive control, and brain plasticity. Dr. Navarro-Torres has published extensively in peer-reviewed neuroscience and cognitive science journals, including *Brain and Language*, *Language, Cognition and Neuroscience*, *Frontiers in Psychology*, and *Bilingualism: Language and Cognition*.

Dr. Navarro-Torres is the recipient of multiple federal research awards, including an NIH Ruth L. Kirschstein National Research Service Award (F31), an NSF Graduate Research Fellowship, an NSF Doctoral Dissertation Research Grant, and an NIH diversity supplement. His current work focuses on translating systems-level neuroscience into clinically meaningful frameworks for understanding environmentally acquired chronic illness, including Chronic Inflammatory Response Syndrome (CIRS).

In addition to his role at the CIRS Research Foundation, Dr. Navarro-Torres provides scientific training and consultation to clinicians and research teams on neuroimaging interpretation, biomarker integration, and environmental exposure science, and currently serves as a scientific consultant on the development of an NIH SBIR grant proposal related to real-time indoor mold detection technologies.
