

## Diabetes

In this study, 320 diabetics received impulsed magnetic field treatment while 100 diabetics (controls) received conservative therapy alone. Results showed beneficial effects with respect to vascular complications in 74 percent of the patients receiving magnetotherapy combined with conservative methods, compared to a 28-percent effectiveness rate among controls. **(1)**

This study involving 72 diabetics with purulent wounds found that magnetic fields aided healing significantly. **(2)**
