AhnLab EPP

Optimized Platform for Endpoint Protection

Manages loads of security functions
on a single agent and single management console

**INTEGRATED MANAGEMENT**   **MONITORING**   **SCALABILITY**   **STABILITY**

AhnLab EPP is the endpoint protection platform for optimized interoperation and integrated management of diverse security functions. AhnLab EPP provides a stronger response against threats than point solution-based responses by providing truly centralized endpoint security management and operation.

AhnLab EPP is based on a single agent and single management console providing integrated management and operation of various AhnLab security endpoint products, including V3, an anti-virus software, and AhnLab EDR.

Plug-in (License)	V3	AhnLab Privacy Management	AhnLab Patch Management	AhnLab ESA	AhnLab EDR
	Anti-Virus	DLP	Patch Mgt.	Security Assessment	Endpoint Detection & Response

AhnLab EPP (Single Management)

AhnLab EPP Agent (Single Agent)

Highlights

AhnLab EPP, a next-generation endpoint security platform, provides diverse and convenient functions for efficient security operations and integrated threat response.

- *At-a-glance easy management with web-based single management console*
- *Integrated threat monitoring and response through the connection of security endpoint products*
- *Maximization of the security control effect by interoperation with third-party solutions via the automated syslogs*
- *Flexible deployment and expansion with a module-based components and operational stability via load balancers*
- *Automated collection of endpoint threat information via single agent*

Integrated Threat Response

AhnLab EPP helps create a powerful endpoint protection with a tightly integrated operation of various security solutions and threat response. With AhnLab EPP, you can implement a management system for the business environment and security requirements of your enterprise or institution.

Convenient Deployment and Operation

- Efficient security management by integrated settings and operations
- Immediate use of various AhnLab security endpoint solutions simply by adding a license
- Operational convenience through a web-based management console and its various management functions
- Enhanced convenience for security administrators through a dynamic UX-based, intuitive dashboard
- Convenient functions for administrators, such as user-defined reports

Web-based Management Console of AhnLab EPP

Integrated Threat Response

- Connected rules and responses applicable to any AhnLab security endpoint products, including V3, an anti-virus software, and AhnLab EDR
- Reports created on set conditions, response commands, exceptions, or designated groups or rules

Expandability and Reliability

- Software based solution which is easy-to-deploy and flexible-to-expand
- Able to deploy according to business scale and IT environment
- Scale-out method to handily add or expand server
- Module based deployment enabling flexible and limitless attachment
- Operational stability through load balancers - prevention and distribution of overloads across module
