Why We Need to Protect Servers

More malware targeting servers are distributed nowadays since corporations keep their business data in servers. A server is positioned where corporate data is gathered and managed, and is directly related to productivity.

When a corporate server is infected, it may cause company-wide infections and business risks.

Server-targeted malware

- Disruption of business operations

Increase of advanced attacks

- Stealthy/hidden malware
- Zero-day attacks

Lack of management & response

- Insufficient management system and security expertise

Powerful and Effective Server Protection

Based on its exclusive Multi-dimensional Analysis Platform, AhnLab V3 Net for Windows Server 9.0 provides features to protect critical data and contribute to secured server operations.

Powerful server protection and malware prevention

- Detects and blocks malware through multi-dimensional analysis (behavioral/reputation-based detection, malicious URL/IP DB, cloud-feed through AhnLab Smart Defense)
- Obtains threat visibility through 'Active Defense' feature and thereby actively responds

Various features for optimized server operation

- Alerts to the administrator with notification mail when threats are detected
- Optimized for various corporate environments

Fast and accurate scan with SmartScan

- Up to 6 times faster scanning based on its exclusive SmartScan
- Minimizes resource usage of server

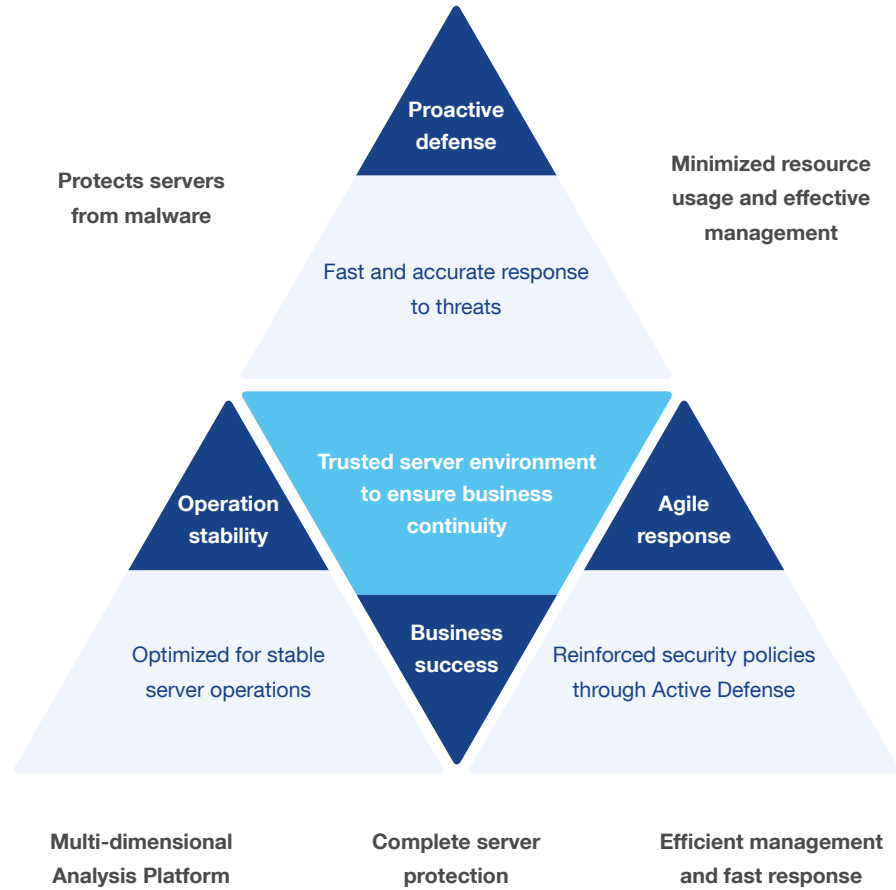

Simple but strong protection with efficient UX

- Easy-to-check the security status through main screen
- Scans or executes System Optimization feature with just a single tap

Benefits

AhnLab V3 Net for Windows Server 9.0 protects critical servers that store important corporate data, and thereby contributes to business success.

System Requirements

Operating Systems	Free Space	Recommended	Minimum
Windows Server 2003 SP2 or later (including R2)	CPU	800MHz or higher	700MHz
	Memory	512MB	256MB
Windows Server 2008 (including R2)	CPU	2GHz or higher	1GHz
	Memory	1GB	512MB
Windows Server 2012 (including R2) / 2016 / 2019	CPU	2GHz or higher	1GHz
	Memory	2GB	1GB
Other	HDD	500MB or higher	
	Languages	English, Korean	

Supports all 32bit and 64bit(x64) CPU of the OS above. (Except IA 64)

More security,
More freedom
