- ✓ Built for non-tech teams
- ✓ Fast implementation — 2 to 5 days
- ✓ Modular pricing — pay only for what you need
- ✓ Remote delivery — no disruption to your business
- ✓ Real, actionable advice — not a 200-page report that no one reads

Enterprise-Grade Cybersecurity — Now Made for Growing Businesses

Why cybersecurity is no longer optional for startups and SMEs — and how Intelidata is bridging the gap with affordable, high-impact protection

Dear Business Owner,

If you think cyberattacks only happen to large corporations, think again.

In the last year alone, 60% of cyberattacks in India have targeted small and mid-sized businesses (SMEs). Why? Because SMEs often lack dedicated security teams, leave misconfigurations unaddressed, and rely on cloud tools that are convenient but vulnerable.

At Intelidata, we believe every business — no matter its size — deserves smart, strong, and affordable cybersecurity.

We've spent years helping enterprises secure their digital assets. Now, we're bringing that same firepower to SMEs, startups, and consulting firms — minus the jargon, the bloated audits, or the enterprise-sized price tags.

Services Designed for Real-World SME Challenges

Dark Web & Data Leak Monitoring

Your employees may unknowingly expose passwords, emails, or payment data — and cybercriminals are buying and selling it.

We monitor hacker forums, Telegram groups, and dark web channels — and alert you before real damage occurs.

NEWSLETTER

Who Should Use These Services?

Our solutions are designed for:

-  Fintech, EdTech, and SaaS startups
-  E-commerce platforms
-  Design studios, Digital marketers, Freelance consultants
-  Any business under 100 employees with no full-time IT security team

What Makes Intelidata Different?

-  Built for non-tech teams
-  Fast implementation — 2 to 5 days
-  Modular pricing — pay only for what you need
-  Remote delivery — no disruption to your business
-  Real, actionable advice — not a 200-page report that no one reads

AI & Chatbot Risk Assessment

Are you using ChatGPT, Google Gemini, or other AI tools in daily work? We assess the legal, operational, and privacy risks of these platforms and help you set guardrails to avoid data leakage or accidental exposure.

SaaS Security Audit

Your business runs on Google Workspace, Notion, Slack, Zoho, and other cloud tools — but who's watching the settings?

We audit your setup to identify:

- Publicly accessible documents
- Overshared folders
- Admins with excessive rights
- Misconfigured permissions

Mini Red Team Simulation

Think of it as a fire drill for your cybersecurity.

We simulate a light attack to test:

- How your employees respond to phishing
- Whether passwords are reused or weak
- How exposed your devices and networks really are

Fast, non-intrusive, and super insightful — perfect for startups and remote teams.

Forensic Readiness for HR & Legal

Don't wait for a problem to realize you're not protected. We help you set up digital evidence trails for situations like:

- Employee exits or disputes
- Data theft suspicions
- Compliance inquiries

This is your “insurance policy” for internal safety and accountability.

About Intelidata

Intelidata is an Indian cybersecurity firm serving businesses across India, Singapore, and the APAC region. We specialize in DevSecOps, Cloud & SaaS Security, Compliance Readiness (ISO 27001, PCI-DSS, GDPR), and SME-focused audits.

We've protected startups, financial platforms, insurance partners, and legal firms — and we'd love to protect yours too.

Intelidata – Enterprise-Grade Cybersecurity. Now Made for SMEs.

Pricing That Respects Your Budget

-  Starts at just ₹25,000
-  Modular packages — choose what you need
-  Delivered remotely within 2–5 business days
-  No hidden costs, no complex licensing

You don't need an in-house CISO. You need someone to watch your back, keep you out of trouble, and flag what matters. That's what we do.

What You Get in Your Free Consultation

Intelidata's experts don't just sell solutions. We analyze your business, your tools, and your risk posture, and then tell you:

- ✓ What you need to fix now
- ✓ What to monitor moving forward
- ✓ What to ignore — because not every threat deserves your time

And we do this before you spend a rupee.

Let's Talk — Risk-Free & Jargon-Free
