Off Grid Heat & Power in a Clean Reliable Way

# SYSTEM INNOVATIONS Introducing the Patent Pending GEMINI SERIES from OFF GRIDIT TECHNOLOGIES

#### WHAT IF:

- You can continuously heat and electrically pump glycol through up to 1000 feet of line with 24/7 self generating power.
- You can charge a 12/24 volt battery bank with a continuous charge of up to 65 watts.

## YOU CAN DO ALL THIS WITH ONE SYSTEM AND ONLY 17000 BTU OF PROPANE OR NATURAL GAS.

- The emissions produced are almost unreadable.
- The pump is the only main moving part.
- The system will run continuously for years with no maintenance and in any environment.
- The system can run in -40°C up to +35°C.

### **APPLICATIONS**

The system is all self regulated and has all built in safety features making setup easy. All that is needed is a gas supply then simply connect to the heat trace lines and a battery bank.

The system can operate as a stand alone heat trace system, a stand alone battery charging system or combined heat trace and battery charging all with the control switches.
